

- Hinges provide elbow stability and help prevent hyperextension
- Hyperextension limiting straps provided additional protection
- Tricep and forearm straps help prevent brace migration
- Gentle compression and warmth help relieve pain
- Soft and comfortable material wicks away moisture
- Contours to the natural shape of the elbow for comfort

Available From:

The Swede-O® Thermal Vent® Hinged Elbow Brace provides stability, comfortable support, gentle compression, and heat therapy to help relieve elbow pain and promote healing. This product is ideal for chronic elbow injuries, elbow tendonitis, mild to moderate elbow instabilities, and elbow pain.

This brace's wide, adjustable straps at the tricep and forearm help prevent brace migration. The removable polycentric hinges provide medial and lateral stability and a stop at 0° to help prevent hyperextension of the elbow.

The adjustable crisscrossing straps offer additional protection to help prevent hyperextension. This product contours to the natural shape of the elbow for comfort; bilateral design fits right or left elbow.

## THERMAL TECHNOLOGY

Engineered with MVT²: MicroVentilated Thermal Technology™
Thermal Vent Supports are a valuable aid to help rehabilitate injured tissue. These products provide warmth and heat therapy to help increase pliability and elasticity of muscles and tendons, making them more responsive to therapy and exercise.

## **SPECIFICATIONS**
