## PLASTIC REFINISHING

1

Clean with **SEM Soap** and a gray scuff pad.

Scrub thoroughly, paying close attention to textured or recessed areas.

Wipe with a clean, damp, lint-free cloth to remove all residue.

2

Apply **Plastic & Leather Prep** or **XXX Universal Surface Cleaner**.

Wipe clean in one direction using a clean, lint-free cloth.

! **Wiping in one direction** will remove contaminants from the surface rather than smearing contaminants over the surface.

! If contamination still exists, water will bead on the surface when dry. Repeat steps 1 and 2 until beading no longer occurs.

3

### DETERMINE THE CORRECT ADHESION PROMOTER.

**A** **Sure-Coat™** is a waterborne coating and is not compatible with **Sand Free Adhesion Promoter**.

If applying **Sure-Coat** on ABS, do not use an adhesion promoter.

Place a drop of acetone on the back of the plastic. Rub with your gloved finger.

If the plastic smears and melts, it is ABS. Use **Sand Free Adhesion Promoter**.

Apply a medium wet coat of **Sand Free Adhesion Promoter**. **SEE NOTE A.**

While still wet, apply a light coat of **Color Coat™**. Avoid applying the first coat too heavily as sagging may occur.

As the **Sand Free Adhesion Promoter** evaporates, **Color Coat** is drawn into the surface resulting in excellent adhesion.

**B** When using **Bumper Coater™**, an adhesion promoter is not required, with the exception of **Bumper Coater Low VOC**.

If the acetone does not have an effect on the plastic, use **XXX Adhesion Promoter** or **Plastic Adhesion Promoter**. **SEE NOTE B.**

Apply one medium wet coat of **XXX Adhesion Promoter** or **Plastic Adhesion Promoter**. Allow to flash 3 – 5 minutes before topcoating.

4

Apply **Bumper Coater**, **Color Coat**, **Sure-Coat**, **Trim Black**, or **Trim Black Ultra**. See pages 5 – 6 for topcoating instructions.

## PRODUCT LIST

# PREP VINYL REFINISHING

Clean with **SEM Soap** and a gray scuff pad.

Scrub thoroughly, paying close attention to textured or recessed areas.

Wipe with a clean, damp, lint-free cloth to remove all residue.

Apply **Vinyl Prep** and wipe clean in one direction using a damp, lint-free cloth.

Or, apply **XXX Universal Surface Cleaner** and wipe clean in one direction using a lint-free cloth.

! **Wiping in one direction** will remove contaminants from the surface rather than smearing contaminants over the surface.

! If contamination still exists, water will bead on the surface when dry. Repeat steps 1 and 2 until beading no longer occurs.

Apply **Color Coat™**, **Sure-Coat™**, or **Classic Coat™**. See pages 5 – 6 for topcoating instructions.

! When coating vinyl with **Color Coat**, plasticizer migration may occasionally occur. When vinyl manufacturers use a high amount of plasticizers, they may bleed and leave a tacky feeling on the coated surface. Apply **Tac Free** over the affected area to eliminate this problem. Consult local regulations to ensure VOC compliance in your area.

! Additional flexibility is required when refinishing vinyl convertible tops with **Color Coat**. Mix 10 parts **Color Coat** toners to 1 part **Super SEM Flex**. Do not use **Color Coat** aerosols.

Do not exceed mixing ratios. Too much **Super SEM Flex** will create a tacky surface that will not dry properly.

# PREP LEATHER REFINISHING

1

Clean with **SEM Soap** and a gray scuff pad.

Scrub thoroughly, paying close attention to textured or recessed areas.

Wipe with a clean, damp cloth to remove all residue.

2

Apply **Plastic & Leather Prep** or **XXX Universal Surface Cleaner**.

Wipe clean in one direction using a damp, lint-free cloth.

! **Wiping in one direction** will remove contaminants from the surface rather than smearing contaminants over the surface.

! If contamination still exists, water will bead on the surface when dry. Repeat steps 1 and 2 until beading no longer occurs.

3

Scuff the leather with a clean, gray scuff pad or P400 – P600 grit sandpaper.

Blow off dust and clean again with **Plastic & Leather Prep**.

4

Apply **Sure-Coat™** or **Classic Coat™**. See pages 5 – 6 for topcoating instructions.

# ENHANCING CARPET AND VELOUR

1

For carpet, clean with a good quality carpet shampoo, if needed.  
For velour, clean with a good quality upholstery shampoo, if needed.  
Allow to dry completely before proceeding.

2

Apply **Plastic & Leather Prep** if needed.  
Scrub lightly with a nylon bristle brush to remove oil, grease and contaminants.  
Allow surface to dry, then vacuum.

3

⚠ **Make certain** surface is dry before applying **Color Coat™** or **Bumper Coater™**.  
Apply 2 medium coats of **Color Coat** or **Bumper Coater**, allowing 3 – 5 minutes flash time between coats.  
Immediately after each coat, brush in all directions with a nylon brush to keep the fibers separated.

⚠ Each coat will create a darker color.

4

Allow last coat to dry 5 – 10 minutes.  
Brush surface again in all directions to make certain fibers are separated, then vacuum.

⚠ **Color Coat** and **Bumper Coater** are recommended to enhance the color of carpet and velour, not to drastically change its color.

The deep roots of the substrate are difficult to penetrate. Trying to do so may adversely affect the texture of the carpet or velour.

Not suitable for long nap or shag carpets.

# TOPCOATING

## PLASTIC, VINYL AND LEATHER

### PLASTIC OR VINYL: **COLOR COAT™** **SPRAY GUN INSTRUCTIONS**

#### 1 AIR PRESSURE

Use 8 – 10 psi at the cap for HVLP equipment or 29 – 40 psi at the gun for compliant equipment.

#### 2 APPLY

Apply 2 – 3 light coats. Apply only enough coats to cover, allowing 5 – 10 minutes flash time between coats.

#### 3 CLEAN

Flush equipment with **XXX Universal Gun Cleaner** until all product has been removed.

! For additional versatility when matching low-gloss OEM colors, **Color Coat Flattener** is available.

It may be used with all **Color Coat** intermix formulas.

### PLASTIC OR VINYL: **BUMPER COATER™, COLOR COAT, TRIM BLACK, TRIM BLACK ULTRA** **AEROSOL INSTRUCTIONS**

#### 1 SHAKE

Shake can vigorously for one minute after mixing ball rattles to ensure color uniformity and to prevent clogging.

#### 2 APPLY

Hold can 6 – 8" from the surface. Apply light coats allowing 5 – 10 minutes flash time between coats.

! Even though film is dry to the touch, the substrate should not be subjected to heavy abuse or abrasion for 24 hours.

### VINYL OR LEATHER: **CLASSIC COAT™** **AEROSOL INSTRUCTIONS**

#### 1 SHAKE

Shake can vigorously for one minute after mixing ball rattles to ensure color uniformity and to prevent clogging.

#### 2 APPLY

Hold can 6 – 8" from the surface. Apply light coats allowing 5 – 10 minutes flash time between coats.

#### ADJUSTABLE TIP

The **Classic Coat** aerosol spray tip can be adjusted for either a vertical or horizontal fan spray pattern.

! Even though film is dry to the touch, the substrate should not be subjected to heavy abuse or abrasion for 24 hours.

# TOPCOATING

## PLASTIC, VINYL AND LEATHER

### PLASTIC, VINYL OR LEATHER: SURE-COAT™ BRUSH INSTRUCTIONS

#### 1 STIR OR SHAKE

**Sure-Coat** is ready to use. Hand stir or shake well to make sure color is consistent.

**Sure-Coat** may appear foamy; however, bubbles will dissipate during application.

#### CROSS LINKER

**OPTIONAL**  
**Sure-Coat Cross Linker** may be added (5g/pint) to increase **Sure-Coat's** durability against the effects of most cleaning chemicals. Note: must be used within 48 hours or you must reintroduce **Cross Linker**.

#### REDUCER

**OPTIONAL**  
**Sure-Coat Reducer** is available for additional versatility in the viscosity of the product. Refer to product label for instructions.

#### 2 APPLY

Use a **Poly-Brush Applicator**.  
Apply one light coat followed by two medium wet coats. Allow 5 – 10 minutes between coats to avoid brush marks.  
Apply sufficient coats to achieve hiding.

### PLASTIC, VINYL OR LEATHER: SURE-COAT™ SPRAY GUN INSTRUCTIONS

#### 1 STIR OR SHAKE

**Sure-Coat** is ready to use. Hand stir or shake well to make sure color is consistent.

**Sure-Coat** may appear foamy; however, bubbles will dissipate during application.

#### 2 PREP EQUIPMENT

If not using dedicated waterborne equipment, flush gun with **XXX Universal Gun Cleaner** followed by water prior to application.

#### CROSS LINKER

**OPTIONAL**  
**Sure-Coat Cross Linker** may be added (5g/pint) to increase **Sure-Coat's** durability against the effects of most cleaning chemicals. Note: must be used within 48 hours or you must reintroduce **Cross Linker**.

#### REDUCER

**OPTIONAL**  
**Sure-Coat Reducer** is available for additional versatility in the viscosity of the product. Refer to product label for instructions.

#### 3 APPLY

Hold gun 6 – 8" from the surface. Use 8 – 10 psi at the cap for HVLP equipment or 29 – 40 psi for compliant equipment.

Apply one light coat followed by two medium wet coats.

Allow 5 – 10 minutes flash time between coats. Air flow is essential between coats. Dry time is dependent on relative humidity, temperature and air circulation.

#### 4 CLEAN EQUIPMENT

Flush equipment with **XXX Universal Gun Cleaner** until all product has been removed.

#### GLOSS OPTIONS

Use **Sure-Coat High Gloss Clear** for high sheen, **Sure-Coat Satin Gloss Clear** for medium sheen and **Sure-Coat Low Luster Clear** for low sheen on interior instrument panels.

Two coats are generally sufficient. To lower gloss, add **Sure-Coat Flattener** to your intermix formula.

Remember to always spray a test panel to check color and gloss.

! **Sure-Coat** can be baked to speed the curing process. Allow 10 minutes before baking. Do not exceed 140°F (60°C) or bake for longer than 30 minutes.
