

INCORRECT ATTACHMENT SHOWN

Band incorrectly clipped
to the Mount

Band should clip to
Nut under Dome

NOTE: Improper connection of the Band to Nut prevents secure attachment to your handlebar. If only one end of the Band is clipped correctly to the Nut, then the Band will not tighten through its normal range. Excessive uneven loading can also cause the Nut to strip the Bolt, binding the two parts together.

INCORRECT
ATTACHMENT SHOWN

**CORRECT
ATTACHMENT SHOWN**

Band clips into both sides of Nut
for a symmetric draw when Bolt is tightened
