

## ISO KF &amp; LF FLANGES

ISO-KF (Klein Flange) and LF (Large Flange) flanges are part of the same family of ISO standard elastomer sealed vacuum components. LewVac ISO flanges and fittings are manufactured in accordance with ISO (International Standard Organization) 2861 standards and tolerances. These flanges are an economical, convenient and simplified means of constructing custom vacuum systems.

ISO flanges provide a complete range of fittings to mount with tubing sized 12.7mm (1/2") up to 508mm (20") diameter. The flange system consists of two sexless, 360° rotatable flanges, a centring ring for alignment and support of the sealing ring and a fastener to compress the seal between the two flanges. ISO-KF and LF sealing components are similar, however their fastening methods differ. LewVac offers a broad range of flanges, fittings, valves, traps and accessories with ISO connections that can be used to create a complete vacuum system or pumping line.

#### Specifications

- Vacuum rated to  $1 \times 10^{-8}$  Torr.
- Leak rating  $< 1 \times 10^{-9}$  std. cc/s helium.
- Temperature range:  $-20^{\circ}\text{C}$  to  $150^{\circ}\text{C}$  (\* $200^{\circ}\text{C}$ )
- Standard materials: Flanges and fittings: 304L stainless steel, 6061 T6 aluminium. Seals: Viton®, nitrile & silicone.
- Other materials available.

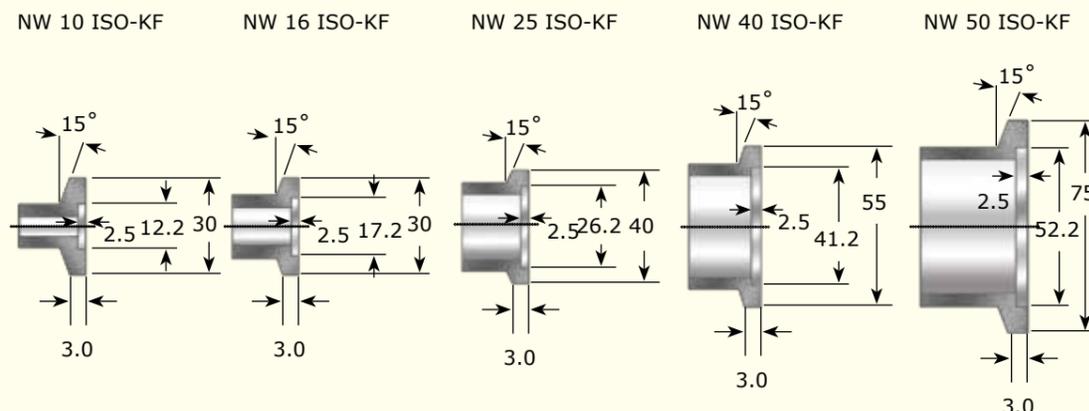

\* - Increased upper limit for intermittent use.

#### Features

- Quickly connect & disconnect.
- Reusable flanges.
- 360° rotatable.
- Sexless flanges.
- Adapters to other flange systems available.
- Compatible with metric and U.S. (imperial) measurements.

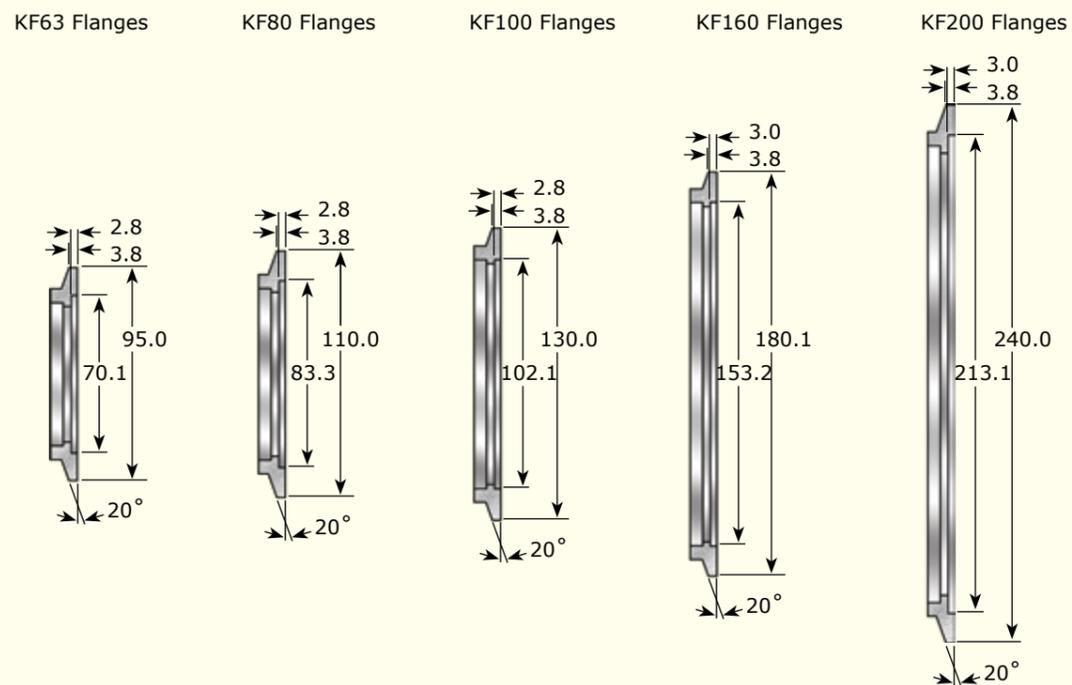

ISO KF & LF Flange Dimensions

Standard ISO KF Flange Dimensions

The ISO standard flange interface dimensions are shown on these two pages and are not repeated throughout the catalogue. Fittings (tees, crosses, elbows, etc.) and adapters, however, have no universal standards. These dimensions are shown throughout the catalogue.

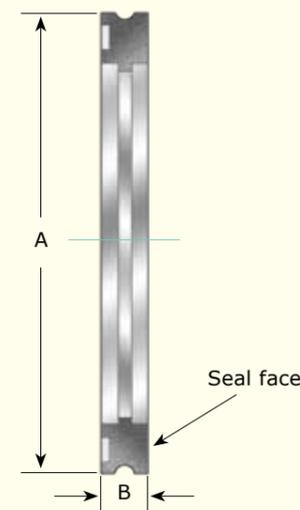

Large Size ISO KF Flange Dimensions

In addition to the standard range (top) of KF flanges, LewVac can now offer KF flanges up to size KF200 (8" / 203.2mm tube outer diameter). ISO standards only apply to KF flanges up to size NW50 (2" / 50.8mm tubing outer diameter). The sizes listed above were developed by vacuum component manufacturers within the United States. KF clamps for these flanges are available in a variety of materials and designs. Adaptive fasteners are also available to allow users to seal directly from an LF or LFB style ISO flange to these more convenient large KF style flanges.

All dimensions are nominal in millimetres unless otherwise specified

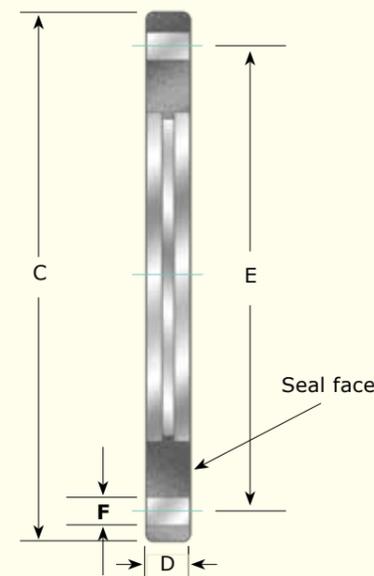

ISO Claw Clamp Flange

ISO LF Flange Dimensions  
Clamp style (ISO-K)

Flange size	Compatible tube OD	A	B	No. clamps required
LF63	63.5	95	12	3 - 4
LF80	76.2	110	12	4 - 8
LF100	101.6	130	12	4 - 8
LF160	152.4	180	12	4 - 8
LF200	203.2	240	12	6 - 12
LF250	254	290	12	6 - 12
LF320	304.8 / 323.9	370	17	8 - 12
LF400	406.4	450	17	8 - 16
LF500	508	550	17	12 - 16

ISO Bolted Flange

ISO LFB Flange Dimensions  
Bolt style (ISO-F)

Flange size	Compatible tube OD	C	D	E	F	No. of holes
LFB63	63.5	130	12	110	9	4
LFB80	76.2	145	12	125	9	8

LFB250	254	335	16	310	11	12
LFB320	304.8 / 323.9	425	20	395	14	12
LFB400	406.4	510	20	480	14	16
LFB500	508	610	20	580	14	16

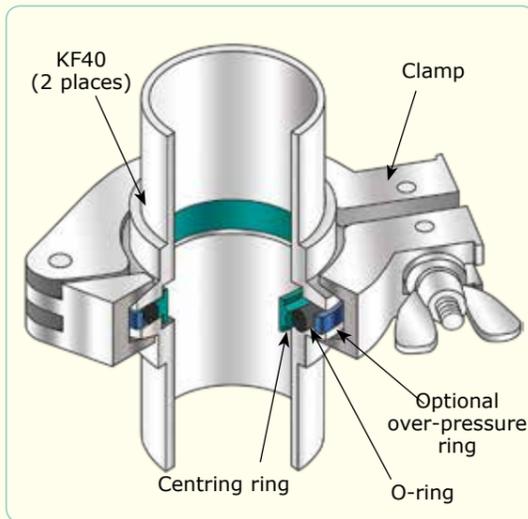

All dimensions are nominal in millimetres unless otherwise specified

## ISO Standard Sealing Assemblies

An ISO seal assembly consists of 3 types of sub-component, two sexless, 360° rotatable flanges, a centring ring for alignment and support of the sealing ring and a fastener to compress the seal between the two flanges. ISO-KF and LF sealing components are similar, however their fastening methods differ. Because of this there are some differences in flange appearance depending on which fastening method you employ. See the illustrations below and on the following pages for quick reference.

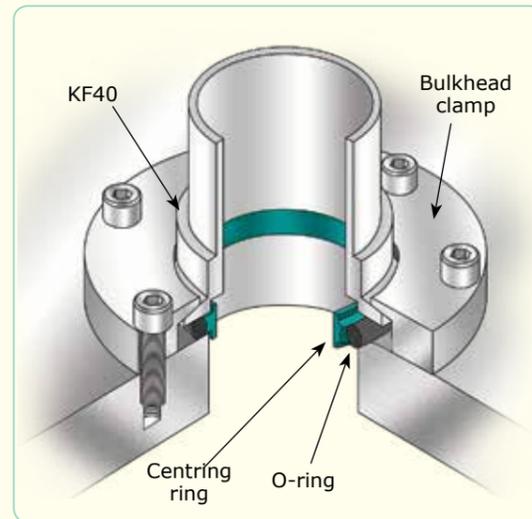

## ISO-KF Quick Clamp Assembly

This is the commonly preferred method for fastening ISO flange connections due to the fact that the KF Clamp offers the fastest and easiest fastening method for creating a reliable ISO vacuum seal. Traditionally these clamps have been limited to use with ISO flanges KF10 to KF50 but LewVac now offers KF clamps and compatible flanges up to size KF200. KF clamps are available in a variety of materials and designs.

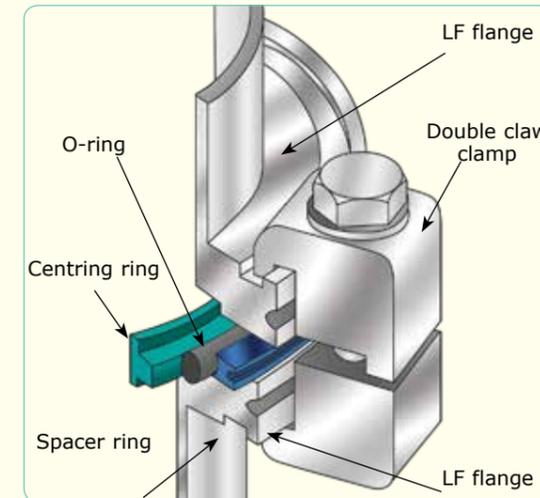

## ISO-KF Bulkhead Clamp Assembly

Bulkhead clamps are used to fasten ISO-KF style flanges directly to valves, chamber walls or baseplates. The object to which the flange is sealing must have a compatible bolt hole pattern and sealing groove machined into the sealing surface.

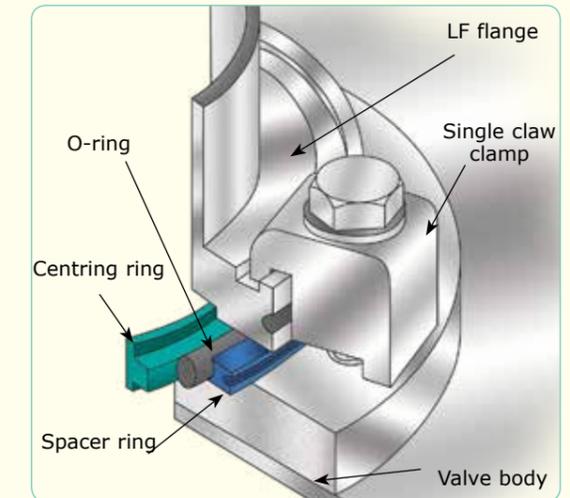

## ISO-LF Double Claw Clamp Assembly

This is traditionally the most popular clamp fastening system for ISO sizes LF63 and larger. This fastening system requires the use of more than one clamp per flange connection. They require more work per seal assembly but they offer greater strength than the quick clamp if the seal assembly must bear a lateral load.

## ISO-LF Single Claw Clamp Assembly

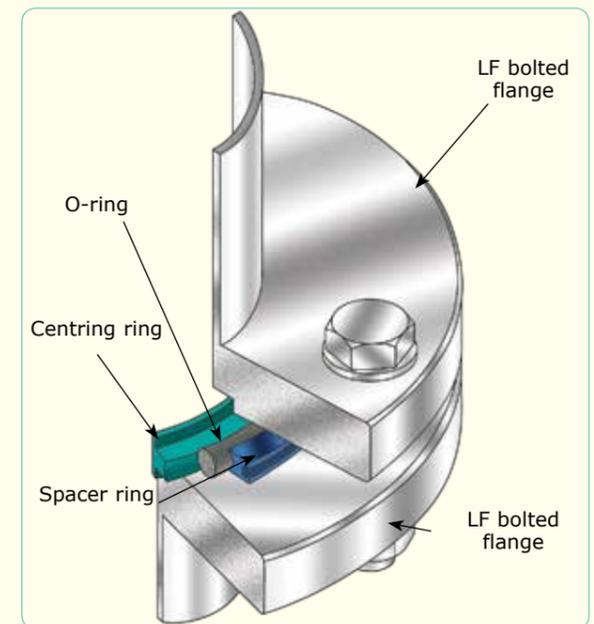

Single claw clamps are used to fasten ISO-LF style clamps directly to LFB flanges with tapped bolt holes, valves, chamber walls or baseplates. The object to which the flange is sealing must have a compatible bolt hole pattern and sealing groove machined into the sealing surface.

## ISO-LFB Assembly

The original means of fastening ISO flange connections offers good lateral load strength like the claw clamp but also requires more than one bolt set per flange connection like the claw clamp. One great disadvantage to using this fastening system is that the user loses the ability to have infinitely rotatable flanges. Great care must be taken to achieve bolt-hole alignment through careful design and installation or the use of rotatable and non-rotatable flanges within your system.

Note: To create a rotatable LFB flange a rotatable bolt ring is added to a standard LF style flange.

All dimensions are nominal in millimetres unless otherwise specified

## ISO Adaptive Sealing Assemblies

The ISO vacuum flange system accommodates the need to connect different styles of ISO flanges and fasteners through adaptive subcomponents. These adaptive components fit around the outer diameter of the flange and allow the direct connection of two different types of ISO flange.

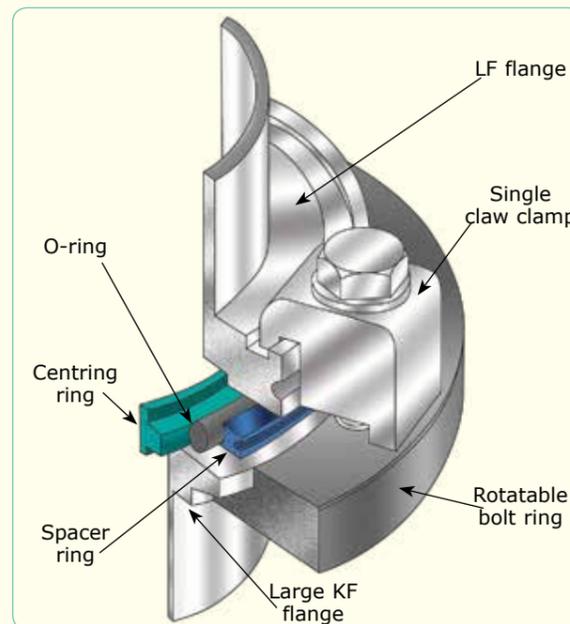

## ISO-LF to ISO-LFB Adaptive Assembly

This fastener sub-component fits around the outer diameter of a claw clamp style LF flange. This allows the flange to behave as a rotatable bolted style LFB flange to ease bolt-hole alignment issues when assembling the vacuum system. This assembly also has the advantage of having a low profile as compared to claw clamp fasteners. After the rotatable bolt ring is mounted to the LF flange a bolt kit is used to fasten the two flanges together.

## ISO-LF to ISO-KF Adaptive Assembly

Adaptive fasteners allow vacuum users to convert directly from one style of ISO fastening flanges to another without the purchase of an adaptive nipple fitting. This saves money and reduces the space needed to accomplish the flange adaptation within your system. The LewVac adaptive ISO fastener can convert a bolted or claw clamp style flange directly to a KF flange for the same tubing diameter.

All dimensions are nominal in millimetres unless otherwise specified

## International &amp; US Sizes &amp; Dimensions

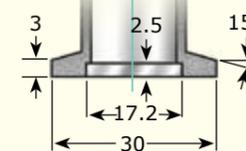

## ISO KF10

- Mates with ISO KF16

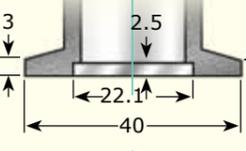

## ISO KF16

- Standard LewVac KF Flange

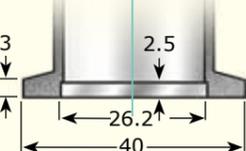

## ISO KF20

- Mates with ISO KF25

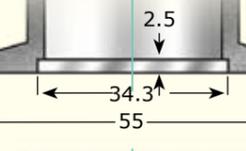

## ISO KF25

- Standard LewVac KF Flange

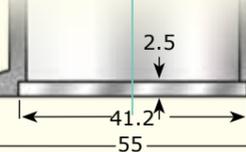

## ISO KF32

- Mates with ISO KF40

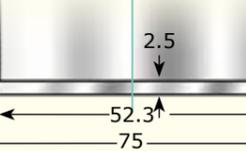

## ISO KF40

- Standard LewVac KF Flange

## ISO KF50

- Standard LewVac KF Flange

All manufacturers of ISO components machine these flanges to measurements determined by the ISO standards referenced on the first page of this introduction, and as such, are interchangeable. It is worth noting that two of the flange sizes detailed on this page, namely the KF20 and KF32 are rarely used by modern vacuum equipment manufacturers and as such are not kept in stock by LewVac. These can be manufactured upon request, but a better option is to use our adaptive centring ring. With our adaptive centring ring, you can adapt directly from a KF10 to a KF16, KF20 to KF25 or KF32 to KF40. The connections can then be fastened with a standard clamp that corresponds with the larger of the two sizes.

The ISO standard flange interface dimensions are shown on pages 3.60 & 3.61 and are not repeated throughout the catalogue. Fittings (tees, crosses, elbows, etc.) and adapters, however, have no universal standards. These dimensions are shown throughout the catalogue.

All dimensions are nominal in millimetres unless otherwise specified

## ISO KF &amp; LF Clamps &amp; Fasteners

The ISO flange system has 3 traditional choices with which to fasten together your flanges and create a seal. These are the hinged or band clamp connection, claw clamp connection and bolt kits. In addition to these fasteners there are adaptation bolt rings and bulk head fasteners for special applications. All of these fasteners have advantages for different applications and are described in detail below.

**KF Clamps**

This is the commonly preferred method for fastening ISO flange connections due to the fact that they offer the fastest and easiest fastening method for creating a reliable ISO vacuum seal. Traditionally these clamps have been limited to use with ISO flange sizes KF10 to KF50 but LewVac now offers KF clamps and compatible flanges up to size KF200. KF clamps are available in a variety of materials and designs, see later pages for details.

**Bulkhead Clamps**

Bulkhead clamps are used to fasten ISO-KF style flanges and components directly to valves, chamber walls, baseplates or bulkheads. The object to which the flange is sealing must have a compatible bolt hole pattern and sealing groove machined into the sealing surface.

**Wall Clamps**

Wall clamps are used to fasten ISO-KF style flanges and components directly to valves, chamber walls, baseplates or bulkheads, where space around the fitting is limited. The object to which the flange is sealing must have suitable bolt holes, although these can be positioned at the users discretion to best suit the particular application and location of the joint.

**Claw Clamps**

These clamps require the use of more than one clamp per flange connection. These are traditionally the most popular clamps for ISO sizes LF63 and larger. These clamps are the only clamps capable of sealing sizes LF250 to LF500. Aluminium and stainless steel versions are available

**Bolt Kits**

The original means of fastening ISO flange connections offers good lateral load strength like the claw clamp but also requires more than one bolt set per flange connection like the claw clamp. One great disadvantage to using this fastening system is that the user loses the ability to have infinitely rotatable flanges. Great care must be taken to achieve bolt-hole alignment through careful design and installation or the use of rotatable and non-rotatable flanges within your system.

**Rotatable Bolt Ring & Adaptive Bolt Ring**

Rotatable bolt rings are a sub-component that fits around the outer diameter of a claw clamp style LF flange. This allows the flange to behave as a rotatable bolted style LFB flange to ease bolt-hole alignment issues when assembling the vacuum system. This assembly also has the advantage of having a low profile as compared to claw clamp fasteners. After the rotatable bolt ring is mounted to the LF flange a bolt kit is used to fasten the two flanges together.

Adaptive bolt rings allow vacuum users to convert directly from one style of ISO fastening flanges to another without the purchase of an adaptive nipple fitting. This saves money and reduces the space needed to accomplish the flange adaptation within your system. The LewVac adaptive ISO fastener can convert a bolted or claw clamp style flange directly to a KF clamp flange for the same tubing diameter.

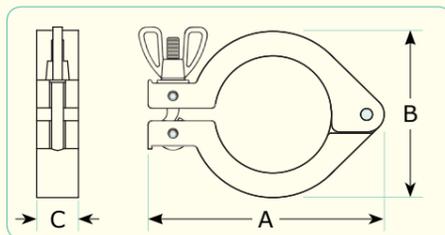

## KF Flange Clamps

## Hinged Clamps - Aluminium

## Features:

- Quick assembly and removal.
- Aluminium clamp.
- Carbon steel bolt
- Ni plated Zn alloy wing nut.

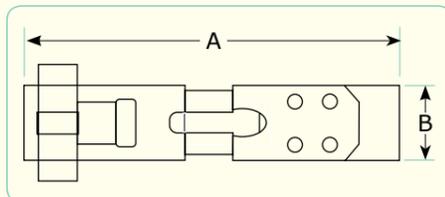

Use With Flange Size	A	B	C	Part Code	Price £	Price €
DN10KF	61	45	16	FL-C16KF

## ISO KF &amp; LF Seals &amp; Centring Rings

LewVac provides high vacuum seals and sealing assemblies for all standard ISO KF & LF sizes. Various different elastomers are available for the sealing ring. Viton® and nitrile are standard, with other materials being available upon request.

**Centring Ring Assemblies**

The basic seal for the ISO flange system includes a supportive inner metallic ring and an elastomer outer ring (o-ring) which is compressed between the ISO flanges to create a vacuum tight seal. LewVac offer a choice of stainless steel or aluminium for the supporting ring and various different elastomers for the sealing ring. Viton® and nitrile are available as standard, with other materials being available upon request.

**Adaptive Centring Ring Assemblies**

These sealing assemblies allow you to adapt directly from the rarely used ISO-KF sizes (KF10, KF20 and KF32) to commonly available ISO-KF sizes (KF16, KF25 and KF40). The adapter assembly can then be fastened with a standard clamp that corresponds with the larger of the two sizes.

**Screen Mesh Centring Ring Assemblies**

These sealing assemblies are useful in many situations in which a vacuum system or instrument needs to be protected from contamination by particulate generated from outside the system, or from within. These seal assemblies are made of the same sub-components as the standard centring ring assemblies. The difference being that the supportive metallic ring for these seals has a screen mesh insert covering the inner aperture.

**Replacement O Rings**

The elastomer sealing rings (o-ring) for the ISO seal assembly must be used in conjunction with a metallic supportive ring. The elastomer component of this sealing assembly is a consumable item. When the o-ring no longer provides consistent vacuum tight seals, replacement elastomer o-rings can be purchased separately from the supportive metallic ring to decrease cost of system maintenance. LewVac offer various different elastomers for the sealing ring. Viton® and nitrile are available as standard, with other materials being available upon request.

**Over Pressure Rings**

This centring ring accessory creates a barrier on the outer diameter of the elastomer sealing ring to prevent "blow out" due to the presence of pressures greater than 1 standard atmosphere within a system. A centring ring assembly with over pressure ring can withstand up to 100psi of pressure, depending on the size of the flange you are using. LewVac CNC machined clamps have a built-in over-pressure ring design. With the use of these clamps there is no need for the added expense of an over pressure ring in addition to the centring ring assembly.

## ISO KF &amp; LF Stainless Steel Centring Rings

**Specifications:****Material**

Centring ring 304 St.St. or aluminium  
 Spacer ring (LF only) aluminium

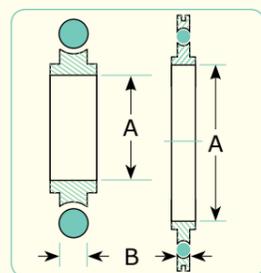

**Temperature Range**

Using Viton® o-rings -20°C to 150°C (200°C\*)

Using nitrile o-rings -20°C to 80°C (100°C\*)

\* - Increased upper limit for intermittent use.

KF centring rings with outer trap ring are available, please contact sales office for details.

## ISO KF Adaptive Centring Rings

## Specifications:

## Material

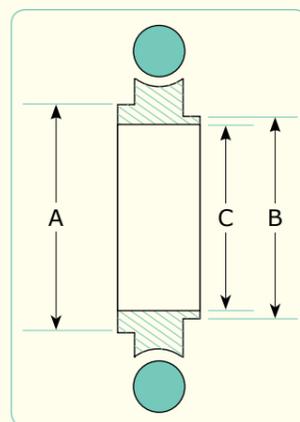

Centring ring 304 St.St. or aluminium

## Temperature Range

Using Viton® o-rings -20°C to 150°C (200°C\*)

Using nitrile o-rings -20°C to 80°C (100°C\*)

\* - Increased upper limit for intermittent use.

With our adaptive centring ring you can adapt directly from KF10 to KF16, KF20 to KF25 and KF32 to KF40 flanges. The connections can then be fastened with a standard clamp that corresponds with the larger of the two sizes. Adaptation to these standard sizes will greatly expand the number of components that have standard dimensions compatible with your vacuum system. This may ease your system assembly, decrease product delivery time and reduce cost.

## ISO KF &amp; LF Centring Rings With Screen

## Specifications:

## Material

Centring ring 304 St.St.

Mesh 304 St.St.

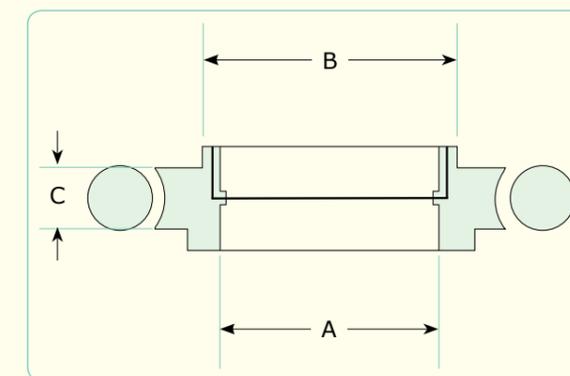

Spacer ring (LF only) Aluminium

## Temperature Range

Using Viton® o-rings -20°C to 150°C (200°C\*)

Using nitrile o-rings -20°C to 80°C (100°C\*)

\* - Increased upper limit for intermittent use.

Screen mesh centring ring assemblies are useful in many situations in which a vacuum system or instrument needs to be protected from contamination by particulate generated from outside the system or from within. The supportive metallic ring for these seals has a screen mesh insert covering the inner aperture. LewVac supplies assemblies as standard with a stainless steel 30 mesh screen. Other mesh sizes (24, 48 & 72) are available on request.

ISO KF Over-Pressure Rings

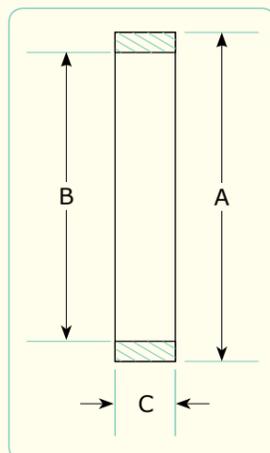

Specifications:

Material

Ring 304 St.St.

Temperature Range

As per o-ring used within assembly

Over-pressure rings create a barrier on the outer diameter of the elastomer sealing ring to prevent "blow out" due to the presence of pressures greater than 1 standard atmosphere within a system. A centring ring assembly with an over-pressure ring can withstand up to 100psi of pressure depending on the size of the flange you are using.

LewVac CNC machined clamps have a built-in over-pressure ring design. With the use of these clamps there is no need for the added expense of an over pressure ring addition to the centring ring assembly.

Over-Pressure Ring

## ISO KF &amp; LF Flanges

**Specifications:****Material**

Flanges & fittings 304 St.St.

**Temperature Range**

Using Viton® o-rings -20°C to 150°C (200°C\*)

Using nitrile o-rings -20°C to 80°C (100°C\*)

\* - Increased upper limit for intermittent use.

**Features:**

- Reusable flanges.
- 304 stainless steel or aluminium as standard.
- Other materials also available on request.
- Sexless flanges.
- Infinitely rotatable.
- Quick sealing and disassembly.
- Easy installation.
- Variety of fastening options.
- Self centring supportive ring.

**Blank Flanges**

These flanges are manufactured with no weld prep or tubing bore. They are commonly used to close unused ports or they are altered by customers with their own custom machining capability for a special use. LewVac offers blank flanges in 304 stainless steel or aluminium as standard. Other materials are available to special order, please contact our sales office for further details.

**Unbored Stub Flanges**

These flanges are manufactured with no weld prep or tubing bore. They are commonly altered by customers with their own custom machining capability for a special use. LewVac offers unbored stub flanges in 304 stainless steel or aluminium as standard. Other materials are available to special order, please contact sales office for further details.

**Weld Flanges**

These flanges are manufactured with a weld prep and tubing bore for immediate installation on to your system with no additional alteration. LewVac offers weld flanges in 304 stainless steel or aluminium as standard. Other materials are available to special order, please contact our sales office for further details.

All dimensions are nominal in millimetres unless otherwise specified

DN50KF Flanges

Specifications:

Material

Flanges 304 St.St. or aluminium  
Seals Viton® or nitrile

Temperature Range

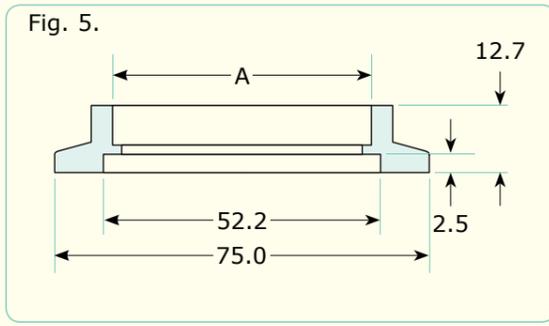

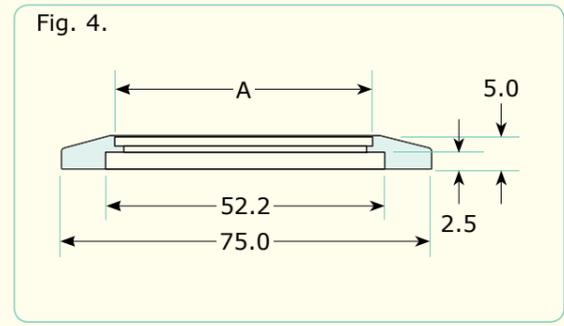

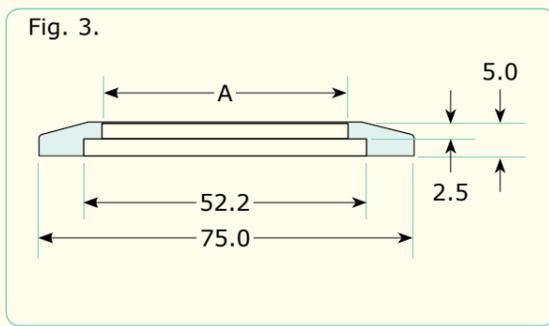

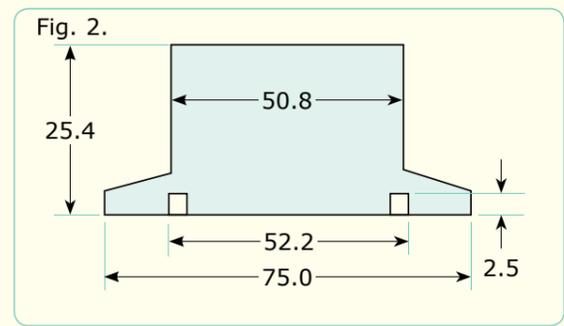

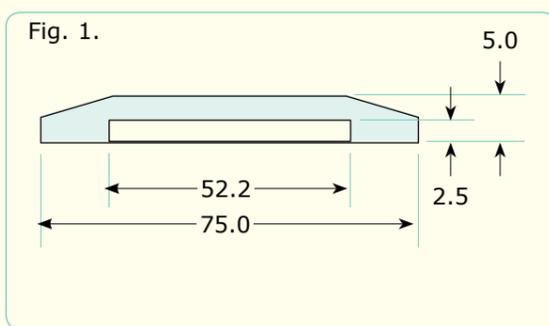

Using Viton® o-rings -20°C to 150°C (200°C\*)  
Using nitrile o-rings -20°C to 80°C (100°C\*)

Vacuum Range

To below 1 x 10<sup>-8</sup> Torr  
\* - Increased upper limit for intermittent use.

Features:

- 304 stainless steel or aluminium flanges as standard.
- Viton® or nitrile seals as standard.
- Other materials available on request.
- Clamp fastening.

## DN500LF Flanges

## Specifications:

## Material

Flanges 304 St.St. or aluminium

Seals Viton® or nitrile

## Temperature Range

Using Viton® o-rings -20°C to 150°C (200°C\*)

Using nitrile o-rings -20°C to 80°C (100°C\*)

Vacuum Range To below 1 x 10<sup>-8</sup> Torr

\* - Increased upper limit for intermittent use.

## Features:

- 304 stainless steel or aluminium flanges as standard.
- Viton® or nitrile seals as standard.
- Other materials available on request.
- Clamp or bolt fastening.

Fig. 2.

DN320-500LF single claw clamp	FL-SCC320-500LF		
DN320-500LF double claw clamp	FL-DCC320-500LF		
DN320-500LF double claw clamp sliding type	FL-DCC320-500SS		
DN500LF bolt ring assy with retaining ring (Fig. 5.)	FL-RBR500LF		
Replacement split ring for DN500LF bolt ring assy	FL-SRR500LF		

The bolt ring assembly allows the addition of bolt holes to a standard claw clamp flange. Bolt rings are supplied complete with a split retaining ring, which fits into the groove around the claw clamp flange and hold the bolt ring in position. Replacement retaining rings can be purchased separately.

All dimensions are nominal in millimetres unless otherwise specified

## ISO KF &amp; LF Fittings

## Features:

- Reusable flanges.
- 304 stainless steel as standard.
- Other materials also available on request.
- Sexless flanges.
- Infinitely rotatable.
- Quick sealing and disassembly.
- Easy installation.
- Variety of fastening options.
- Self centring supportive ring.

## Half Nipples (Tubulated Flanges)

These fittings are manufactured with a flange on one end and plain tubing on the other. Half nipples are often welded onto a custom vacuum system or instrument by a customer with in-house welding capabilities. These fittings can also be used with quick disconnect compression fittings to make a vacuum tight connection without welding. LewVac supplies vacuum half nipples in 304 stainless steel as standard with other materials available on request.

## Full Nipples (Straight / Conical Connectors)

These fittings are manufactured with an ISO flange on each end of a straight section of tubing. Nipples are used to create a weld free straight connection within a vacuum system. Nipples are also used as adapters between different tubing sizes or flange types. These fittings are available with straight or conical tubes in all ISO sizes and flange types. LewVac supplies vacuum nipples in 304 stainless steel as standard with other materials available on request.

## Specifications:

## Material

Flanges & fittings 304 St.St. or aluminium

## Temperature Range

Using Viton® o-rings -20°C to 150°C (200°C\*)

Using nitrile o-rings -20°C to 80°C (100°C\*)

Vacuum Range To below  $1 \times 10^{-8}$  Torr

\* - Increased upper limit for intermittent use.

## Elbows

These fittings are manufactured with a flange on each end of a curved section of tubing. Elbows accommodate turns or alignment considerations for vacuum system design. Elbows are offered in 5 designs; 45° radius elbow, 90° radius elbow, 90° mitred elbow, 90° tangent radius elbow and 180° radius elbow to accommodate a wide variety of system configurations. LewVac supplies vacuum elbows in 304 stainless steel as standard with other materials available on request.

## Tees

These fittings are manufactured with a flange on each end of a "T" shaped section of tubing. Tees accommodate junctions or alignment considerations for vacuum system design. Tees are also used as junction adapters between different tubing sizes or flange types. These fittings are available in all ISO sizes and flange types. LewVac supplies vacuum tees in 304 stainless steel as standard with other materials available on request.

## Crosses

These fittings are manufactured with a flange on each end of an "X" shaped section of tubing. Crosses accommodate junctions or alignment considerations for vacuum system design. Crosses are also used as junction adapters between different tubing sizes or flange types. These fittings are available in all ISO sizes and flange types. LewVac supplies vacuum crosses in 304 stainless steel as standard with other materials available on request.

## 5-Way Crosses, 6-Way Crosses &amp; Cubes

These fittings are manufactured with a flange on each end of a 5 or 6 sided tubing junction. These crosses accommodate complex junctions or alignment considerations for vacuum system design. Larger sizes are sometimes used as the starting point of a simple vacuum chamber design. LewVac supplies 5 and 6-way vacuum crosses in 304 stainless steel as standard with other materials available on request.

Elbows

**Specifications:**

**Material**

Flanges 304 St.St.

Seals Viton® or nitrile

**Temperature Range**

Using Viton® o-rings -20°C to 150°C (200°C\*)

Using nitrile o-rings -20°C to 80°C (100°C\*)

**Vacuum Range** To below 1 x 10<sup>-8</sup> Torr

\* - Increased upper limit for intermittent use.

**Features:**

- 304 stainless steel as standard.
- Other materials available on request.
- Custom lengths / sizes available upon request.
