# Safety Guidelines

**TIAOJIU**

- A) READ AND FOLLOW ALL SAFETY INSTRUCTIONS.
- B) DANGER – To avoid possible electric shock, special care should be taken since water is employed in the use of aquarium equipment. For each of the following situations, do not attempt repairs by yourself; return the appliance to an authorized service facility for service or discard the appliance:
  - 1) If the appliance falls into the water, DON'T reach for it! First unplug it and then retrieve it. If electrical components of the appliance get wet, unplug the appliance immediately. (Non-immersible equipment only)
  - 2) If the appliance shows any sign of abnormal water leakage, immediately unplug it from the power source. (Immersible equipment only)
  - 3) Carefully examine the appliance after installation. It should not be plugged in if there is water on parts not intended to be wet.
  - 4) Do not operate any appliance if it has a damaged cord or plug, or if it is malfunctioning or has been dropped or damaged in any manner.
  - 5) To avoid the possibility of the appliance plug or receptacle getting wet, position aquarium stand and tank to one side of a wall-mounted receptacle to prevent water from dripping onto the receptacle or plug. A "drip loop," shown in the figure on page 6, should be arranged by the user for each cord connecting an aquarium appliance to a receptacle. The "drip loop" is that part of the cord below the level of the receptacle, or the connector if an extension cord is used, to prevent water traveling along the cord and coming in contact with the receptacle. If the plug or receptacle does get wet, DON'T unplug the cord. Disconnect the fuse or circuit breaker that supplies power to the appliance. Then, unplug and examine for presence of water in the receptacle.
- C) Close supervision is necessary when any appliance is used by or near children.
- D) To avoid injury, do not contact moving parts or hot parts such as heaters, reflectors, lamp bulbs, and the like.
- E) Always unplug an appliance from an outlet when not in use, before putting on or taking off parts, and before cleaning. Never yank the cord to pull the plug from outlet. Grasp the plug and pull to disconnect.
- F) Do not use an appliance for other than intended use. The use of attachments not recommended or sold by the appliance manufacturer may cause an unsafe condition.
- G) Do not install or store the appliance where it will be exposed to the weather or to temperatures below freezing.
- H) Make sure an appliance mounted on a tank is securely installed before operating it.
- I) Read and observe all the important notices on the appliance.
- J) If an extension cord is necessary, a cord with a proper rating should be used. A cord rated for less amperes or watts than the appliance rating may overheat. Care should be taken to arrange the cord so that it will not be tripped over or pulled.
- K) For added safety, the appliance must be plugged into a receptacle controlled by a GFCI (ground fault interrupter) circuit breaker. The device must be properly connected to a grounded three-prong receptacle.
- L) This appliance is intended FOR HOUSEHOLD USE ONLY.
- M) This Light Fixture is required to be used over a covered aquarium. A glass top or protective barrier is required to minimize the fixture's exposure to water.
- N) SAVE THESE INSTRUCTIONS.

**Inside the Box**

WiFi Edge LED Fixture

Power Supply

Setup Guide

1. Place the power supply in a location where it won't get wet. Create a drip loop and connect the fixture cord to the power outlet.

2. Scan the QR code or search for the name "TT3Connect" to download the TT3 Connect App to your smart phone.

*Scan QR code for App*

*NOTE: The only way to control the fixture is with the TT3 Connect App*

TT3Connect icon

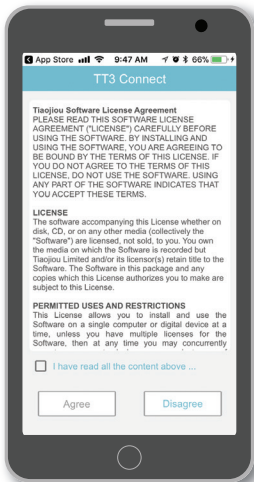

3. Navigate to Settings in your phone and ensure it is connected to a 2.4GHz WiFi Network.

\* In cases where a dual band (2.4GHz+5GHz) WiFi router is used, it is strongly suggested to use different SSID for each band to distinguish the 2.4GHz network from the 5GHz.

4. Launch the TT3 Connect App and follow the prompts.

5. In the TT3 Connect App, tap the “+” on the top right and select “Add Fixture”.

6. To pair the fixture with your phone:
- Press the button on the side of the fixture once.

The LED indicator will turn solid purple.

- Press and hold the button for 3 seconds. The LED indicator will blink purple.

7. Enter the password for the WiFi network.

The fixture will connect to the WiFi network and the indicator light will turn solid color.

To verify if the fixture is well connected, close the TT3 Connect App and re-open the App. The App will scan for fixtures and then display the fixture you've just connected to.

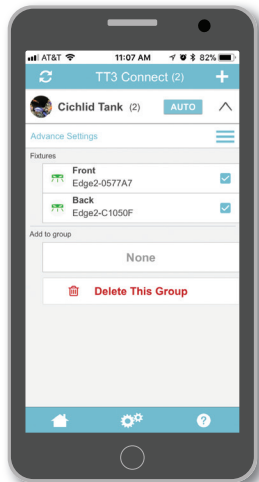

To rename a fixture for better distinguishability, press and hold the default name of the fixture.

In this example the default name is “Edge2-0577A7”

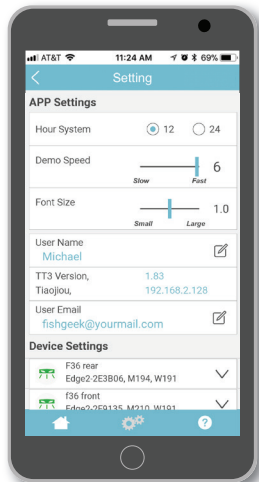

The TT3 Connect App allows you to group multiple Edge fixtures together and control them as a single fixture. This is helpful when more than one fixture are installed over a single aquarium or if two separate aquariums have the same lighting requirements.

- In the TT3 Connect App, tap the “+” on the top right and select “Add Group”.
- Enter a name for your group. Example would be “Cichlid Tank”. You can also include a picture of the tank for easy reference.
- Select the fixtures you wish to group together.

Select the gears icon from the bottom menu bar:

- Hour System** – Time will be displayed as AM/PM or 24 Hour format.
- Demo Speed** – The fixture has the ability to show you an entire 24 hours of programmed lighting in a short period of time. This is helpful when programming the fixture to view the fixture colors and intensity. Demo Speed allows you to view the programming at your preferred speed.
- Font Size** – Set font size of TT3Connect.  
★ Only for Android
- Name & Email** – Update as needed.

The WiFi Edge Fixtures come pre-programmed with color spectrums and times. When adding a new fixture or group, you will be prompted to select your choice of pre-programmed options. Select the color scheme best suited for your application. You will be able to modify after initial setup.

### Freshwater Options

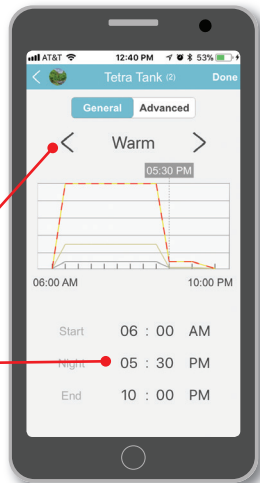

- > Warm
- > White
- > Cool

### Marine Options

- > White
- > Cool White
- > Blue White

Toggle between pre-programmed colors

Tap to change time

After initial setup, it is possible to adjust the light intensity, colors and time. These adjustments can be made either for a fixture or a group.

**NOTE:** If a fixture is part of a group, only the group can be adjusted.

The image shows a smartphone displaying the 'Tetra Tank' app. The screen features a header with the title 'Tetra Tank' and a back arrow. Below the header is a circular image of a fish tank with a globe overlay. The main part of the screen is a graph showing light intensity over a 24-hour period. The y-axis is labeled '100%' and the x-axis shows time from 12 AM to 12 PM. A red dot is placed on the graph. Below the graph is a control bar with a lightning bolt icon, a play button, and a sun icon. At the bottom of the screen are icons for home, settings, and help. Five red callout boxes with white text and red arrows point to specific elements: 1. 'Tap to turn on Lightning Storm' points to the lightning bolt icon. 2. 'Advance to next time point or preview 24-hour programming with the play button' points to the play button. 3. 'Tap on the graph to modify the light intensity, colors and times' points to the red dot on the graph. 4. 'Tap to turn on Weather Function' points to the sun icon. 5. 'Adjust light intensity for all LED's at the same time' points to a slider control below the graph.

Tap to turn on Lightning Storm

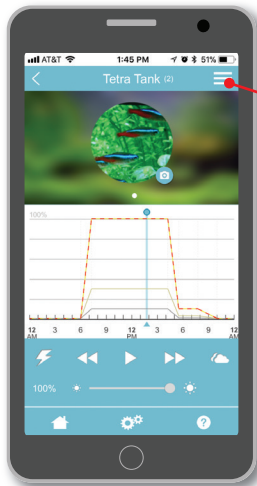

Advance to next time point or preview 24-hour programming with the play button

Tap on the graph to modify the light intensity, colors and times

Tap to turn on Weather Function

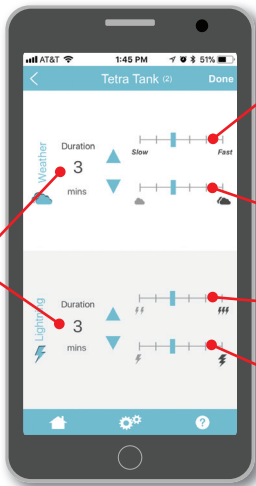

Adjust light intensity for all LED's at the same time

Tap the top right menu to access the Lightning and Weather functions

Tap number to change duration

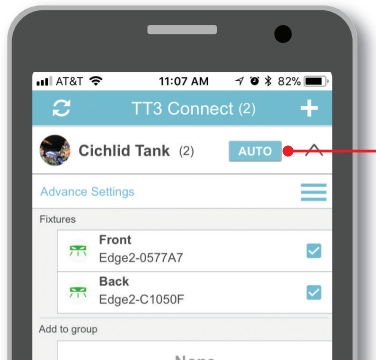

Adjust how quickly weather randomly changes

Change intensity of weather

Adjust how often lightning strikes

Adjust intensity of lightning

**SOLID BLUE –**  
Fixture is in the AUTO mode

**SOLID GREEN –**  
Fixture is manually turned ON or OFF

**BLINKING YELLOW –**  
Not connected to WiFi

**SOLID PURPLE –**  
Pairing Button has been pressed once

**BLINKING PURPLE –**  
Pairing Button held for three seconds  
and fixture is ready to be paired with  
a WiFi Network

**SOLID RED –**  
Fixture has overheated and has automatically  
reduced light intensity to allow for cooling

Below are common situations and the most common solutions.

If you have issues that you cannot solve, please contact Distributor of Tiaojiou. or
