

STRIKEHOLD FIELD TEST

Automotive Repair Shop

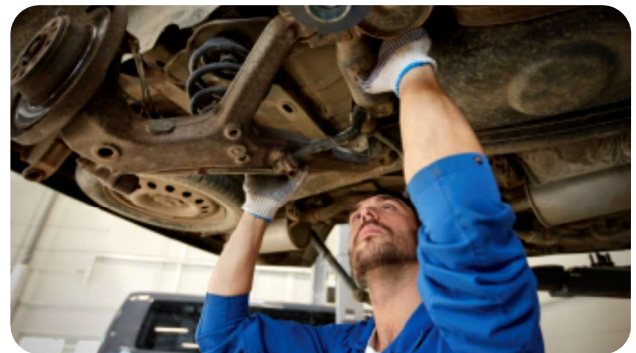

"This product made me throw away all other rust and corrosion products in my shop!" If the US Military uses this stuff on the M1A2 Abrams Tank, then it must be a pretty good product to use on a car."

StrikeHold is a fast-acting, penetrating compound that cuts through dirt, rust and corrosion, quickly getting into metal parts that have become frozen or encrusted. Protects metal surfaces by leaving a shield-like protective layer against the effects of moisture and corrosion, it penetrates and displaces water and prevents rust and corrosion from re-forming.

Protects electrical connections, wiring and other water sensitive parts, from salt, dirt and corrosion. Extends the life of bulb sockets. StrikeHold will

actually improve electrical performance by cleaning and protecting contacts and internal parts, including circuitry and connections. Prevents voltage leakage around any electrical connections. Also prevents spark plugs from fusing to boots. Perfect for modern high energy ignition systems. Will not harm materials such as rubber, paint, most plastics and wood finishes.
