Please keep the
security distance.

Please wear disposable
gloves inside the shop.

Please use hand
sanitizer before entering.

Please wear mask
inside the shop.

THANK YOU

How to Design and Print COVID-19 Posters

This document will explain how to produce posters to promote social distancing and health measures to fight against COVID-19

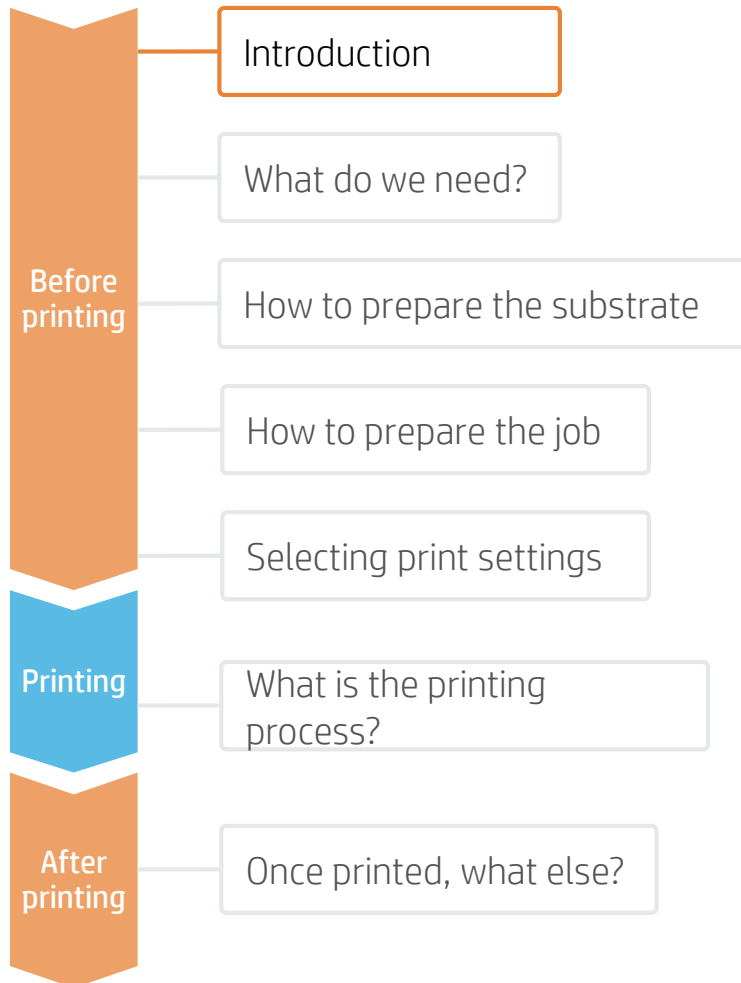

HP DesignJet printers

How to produce COVID-19 Posters

Introduction

Economical, easy to install, move around, transport and store; Posters are a great way to create impactful Signs. With total versatility of sizes, they can easily adapt to layout changes, as they can be placed in the most impactful locations at any given moment with little installation experience required.

HP DesignJet technology offers the possibility to create Posters with an array of different paper and adhesive large format materials to meet all your price and durability needs, including bond and coated papers, photographic papers and self-adhesive materials.

HP Applications Center is a free web based design and print solution that offers ready to print poster designs as well as a vast collection of illustrations and photos to design your own. It even allows you to add your own web2Print service to your website.

How to produce COVID-19 Posters

What do we need?

Substrate

Bond & Coated paper,
Photographic paper &
Self-adhesive Materials

HP DesignJet Printer

Software tools

(HP Click, HP SmartStream,
RIP, image editor, etc.)

Poster hanger

Automatic Cutter
or Manual Cutting tools

Liquid or Film
Laminate
(Optional)

How to produce COVID-19 Posters

How to prepare the substrate

1. Select Substrate Type

The most common types are:

- Bond paper
- Coated paper
- Photographic paper
- Self-adhesive Materials

Considerations: Durability

For long term applications and/or if the prints will be cleaned or sterilized regularly:

- Consider laminating the prints for the highest resistance to chemicals such as: alcohol, ethanol and Windex.
- PVC Banners offer the best durability on un-protected prints.
- For PET & PP materials, solvent-based coatings offer better durability than water-based ones.

Considerations: Roll Size

Choose the media width that best fits your Roll-up mechanism. Consider using a slightly wider roll than the desired sign to apply a safety margin. The most popular sign widths are 85 cm (33") and 150 cm (59"). The most popular sign length is 200 cm (79").

Considerations: Opacity

To prevent rear light sources from affecting the optical saturation and readability of the signs, light-blocking materials are recommended. For example: gray-back films or block-out banners.

Considerations: Choice of HP Substrates

To get the image quality and durability that meets your clients'/customers' needs and expectations, HP substrates and HP inks are designed together as a matched component system to provide uncompromising image quality, consistency, durability, performance, and value – every time.

The list of compatible HP substrates for roll-up applications are listed on the last page of this document.

How to produce COVID-19 Posters

How to prepare the job

1. Open HP Applications Center Poster App

Go to: www.hpapplicationscenter.com

Select: **HP Applications Center Lite** if you just wish to quickly select a template or design and print a poster in-house

HP Applications Center Pro if you wish to offer a web to Print Service for your customers

Use of HP Applications Center is FREE but an HP large format printer serial # is required for registration authentication

HP Applications Center Lite

2. Instant start

Start designing straight away. Sign in or create a free account to save or print your designs

3. Select poster size and orientation

The default poster size in the app is A2, but some template designs may vary. Re-size and change orientation of your designs if required in **Settings** in the bottom left of the designer

HP Applications Center Pro

2. Sign in or create your account

Sign in or create your free account using your HP large format printer serial #

3. Launch the Poster Designer and select the poster size

From the right hand side of the **Dashboard**, select **Create Posters** to launch the designer app.

When open, select desired poster **size**.

How to produce COVID-19 Posters

How to prepare the job

4. Select, edit or design your poster

Select a free design

Select from one of dozens of free poster designs in **Templates** in the left hand navigation bar. Many can also be easily edited in the web app.

COVID-19 related templates, can be found by selecting the icon  in **Templates** navigation bar and using the market filter menu.

Edit or create your own design

Change **backgrounds**, add **text** or select from millions of free and premium **photos** and illustrations **objects** to create your own design.

COVID-19 related illustrations can be found by selecting the COVID-19 icon  **Objects**

To customize a design object, simply right click on the item and choose the desired function:

Recolor, transparency, duplicate, rotate, align, resize, order, flip or scale.

HP Applications Center Lite

5. Download to print

When finished designing, click **Next** and **Login/create an Account** if prompted to save your design.

Select **Next**, then **Send to Print** to download your Ready2Print pdf

See Printing steps for approved printing software and Automated Workflow options

HP Applications Center Pro

5. Download to print

Select the order from the **Dashboard** and click the pdf link below the job thumbnail in the **Order ticket** to download your Ready2Print pdf

How to produce COVID-19 Posters

How to prepare the job

Considerations: Custom settings

To customize the print file by adding trim lines, mechanism area, size options as well as Designer user interface customizations, media options and pricing, select **Applications** and **Roll Up Settings**

Considerations: For more design creativity and customization options

1. Create the Image

Create the graphic using standard design tools (Photoshop, Illustrator...)

Make sure the job size fits the characteristics of your poster hanger.

2. Add Cutting Marks (optional)

If you plan to use an automatic cutter, create the cutting job for your image through your RIP.

Check if your poster hanger requires any special shapes or perforations (e.g. holes for grommets).

How to produce COVID-19 Posters

Selecting print settings

Once the job is selected and the substrate is ready, we're almost ready to print.

First we need to select the right printing settings. These settings are found within the **substrate presets**.

Use different media presets based on the substrate being used

Substrate presets

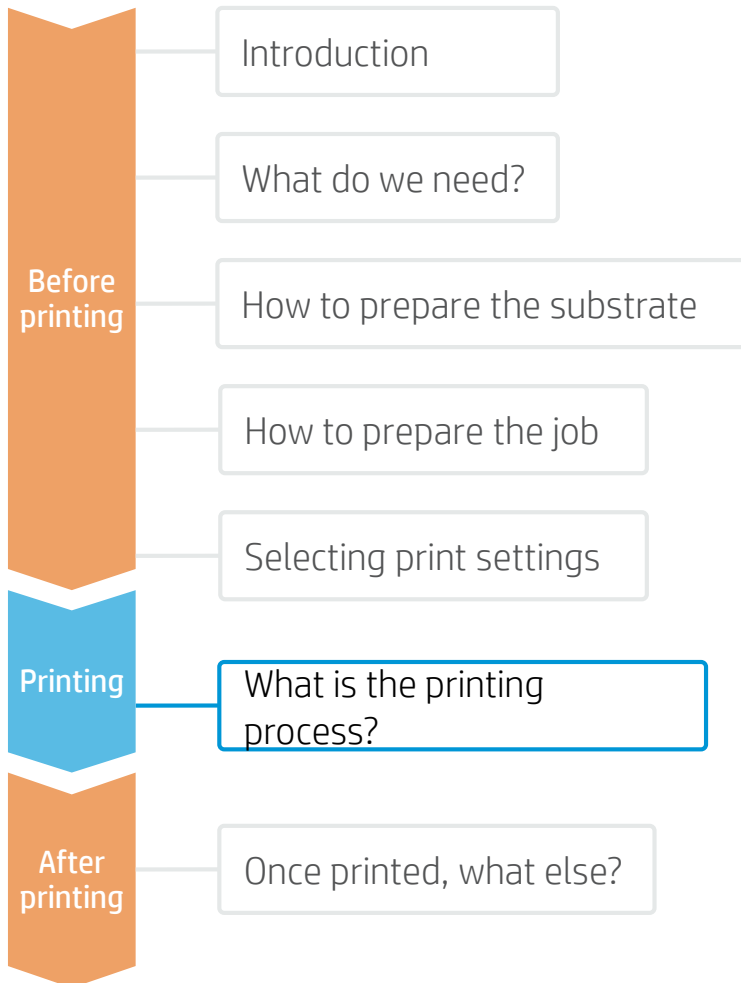

If the substrate you need to print on has a substrate preset available, we recommend downloading, installing, and using it on your printer. If there is no substrate preset for the specific substrate being used, using the "Generic" preset for your substrate's type (Bond Paper, Coated Paper, ...) may be a good starting point option.

For HP-branded substrates

You can use the original HP preset available on the printer front panel ("HP Universal Bond", "HP Coated Paper", ...) or you may need to download it on www.HPLFMedia.com before installing, and using it on your printer.

How to COVID-19 Posters

The printing process

1. Select a compatible print software.

Ready2Print pdf orders from HP Applications Center are encrypted and can only be processed by approved print software. These include, HP Click and HP SmartStream as well as certified 3rd Party RIP software

2. Follow the loading process for your printer.

3. Change the media type to the specific preset previously selected.

4. Use the optional take-up reel if available (DesignJet Z6dr, Z9dr Z6800, Z6600, Z6810, Z6610); we recommend using it for large jobs.

5. If available, activate the Vertical Trimmer to trim media while printing. (HP DesignJet Z6dr & Z9dr 44-in PostScript® Printer with V-Trimmer).

6. Select the job file and drag it into the printer's print software

How to produce Roll-up Banners

The printing process

HP Click printing software
Radically simple printing

With just one Click¹ you can print the encrypted ready2print PDF from HP Applications Center.

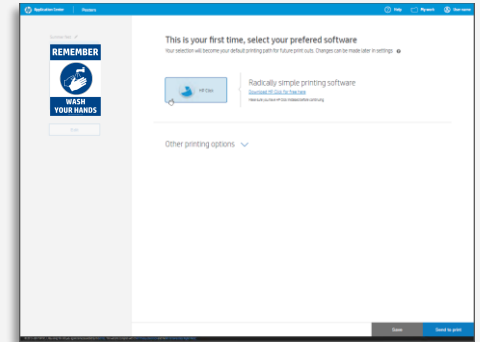

[Click to play video](#)

HP Click is the recommended workflow for [HP Applications Center Lite](#).

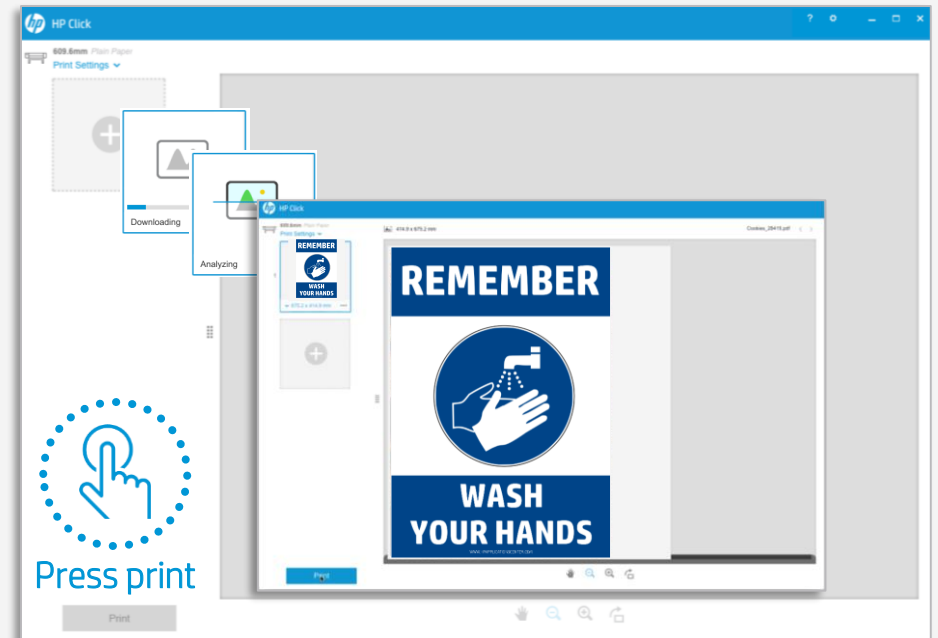

For the best experience we recommend [installation](#) prior to designing your poster

Select **HP Click** from the print workflow options after previewing your design and **Send to print**

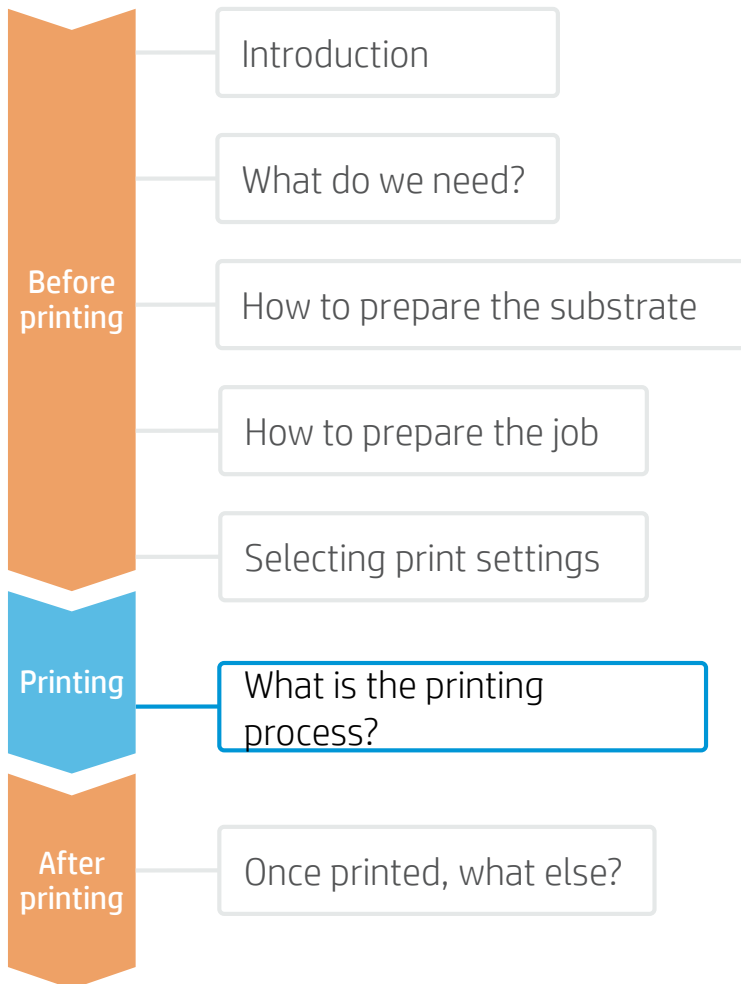

If pre-installed - HP Click will automatically launch and load the file when a print job is triggered in HP Applications Center Lite.

Once downloaded

How to produce Roll-up Banners

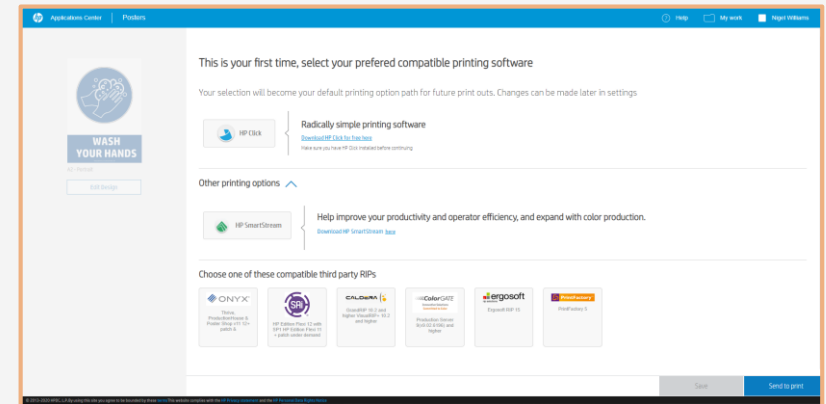

The printing process

Other printing options

Options include:

- HP SmartStream
- Compatible third party RIPs: (Onyx, Sai, Caldera, ColorGATE, ergosoft, & PrintFactory)

HP SmartStream

Your large-format production workflow—two times more efficient¹

Suitable for use with [HP Applications Center Lite](#) but we recommend using [HP Applications Center Pro](#) together with a jdf connected hotfolder set up to automate your print workflow.

Click [here](#) for jdf connection set-up instructions

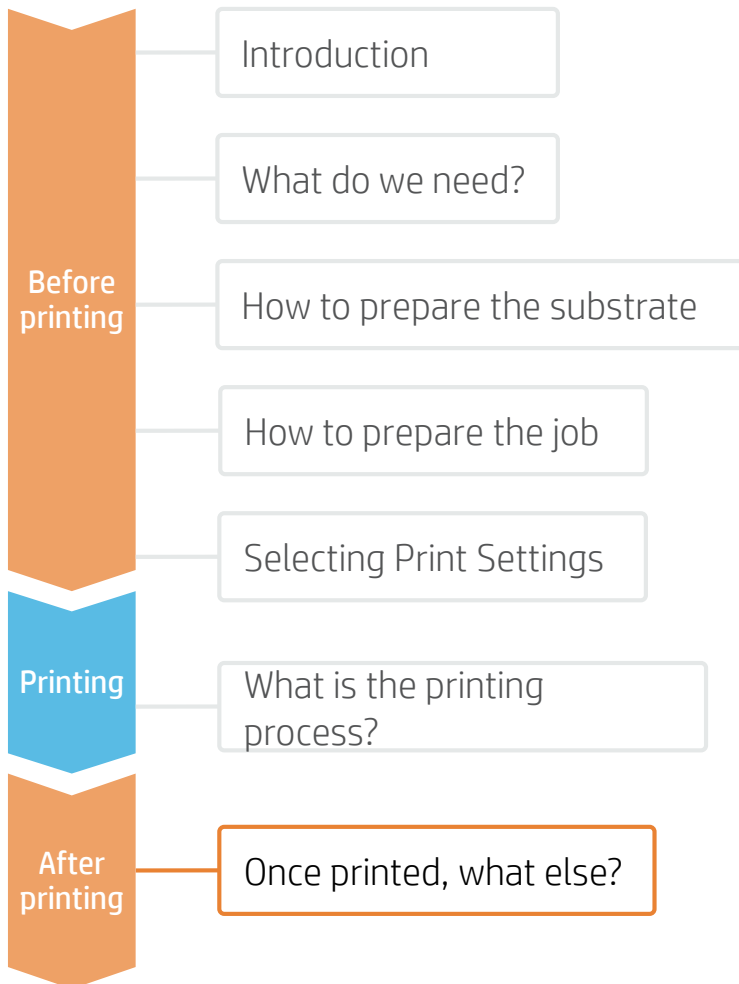

Choose one of these compatible third party RIPs

How to produce COVID-19 Posters

How to prepare the substrate

1. Protect the Prints (Optional)

Apply film or liquid lamination to the prints for extra durability against chemicals and long term use.

Choose the protection that best fits the media used. For example, use a PVC-based transparent film to laminate PVC substrates or a PET-based transparent film to laminate PET substrates.

 **NOTE:** Lamination can be performed right after printing. You do not need to wait.

 **NOTE:** We recommend storing laminated rolls with the laminate facing out.

2. Cut the Prints

Use manual tools or an automatic cutter to bring the print to the desired size and shape.

If available, use the inline Vertical Trimmer during printing (DesignJet Z6dr & Z9dr with Vertical Trimmer)

Drill holes and apply grommets (if needed on the support mechanism).

3. Assemble the poster hanger

Follow your hanger's instructions to fit the printed poster on it.

Most commonly, the steps involve:

1. Releasing the top and bottom clips.
2. Positioning the media between the clips
3. Ensure all design messaging is visible
4. Close both clips to clasp the poster
5. Hang in place, adjusting length of hanger fixings to ensure straight
