* Assumes gate to be in good condition and swinging in a level plane.
When combined with convenience open option, 1/2HP max weight is 600 Lbs., 1 HP max weight is 700 Lbs.

** These operators use a step-down transformer to achieve 115 VAC operating voltage.

† Optional factory installed DC powered drive system provides an automatic method to open the gate when primary (AC) power fails.

Technical Features

Mechanical

Primary Reduction is provided by a pulley / belt driving a 60:1 worm gear reduction system running in a continuous oil bath

The 6500 rotates the gate 90° in approximately 12-14 seconds

Operator mechanics are mounted on a steel frame plated for corrosion resistance

Two-piece articulating arm mechanical slow start / slow stop function.

Mounting: Operator is mounted to a concrete mounting pad

Keyed access is provided to release arm for manual gate operation in the event of a power outage

Split polyurethane housing simplifies installation and maintenance.
No need to remove the gate arm

Unique breakaway hub helps to protect the gear box if the gate is rammed

Electrical

Adjustable electronic magnetic limits

Auto-close timer (1-23 seconds)

Gate overlap feature for bi-parting (dual) gate operation

Simple connection for secondary operator in bi-parting gate systems

Built-in On / Off switch

Built-in alarm reset switch

Selectable shadow / reverse loop function

Magnetic lock power

Ports for plug-in open and reverse loop detectors. DKS plug-in detectors only

Three 115 VAC convenience outlets for accessory transformers

Gate Tracker reporting output provides operator data to access control system (DKS 1833, 1835, 1837 or 1838 only)

Miscellaneous

Environmental: 10°F to 115°F (-12°C to 46°C)
