VIKING KONNECT

FOR ANDROID

Quick Start Guide

1. Download and install Viking Konnect from the Play Store.

2. In your settings, make sure your Bluetooth is set to ON.

3. In the Bluetooth options, tap "Search For Devices".

4. Select the Viking operator you wish to pair your Android phone with.

5. Open Viking Konnect by tapping the Viking Konnect icon.

6. Tap "Select Your Device" to connect to the operator via Bluetooth.

Your Android phone should now be connected to the operator.

MAIN SCREEN

The bottom half of the screen represents the Diagnostic LCD on the V-Flex control board. You can scroll through the information by tapping NEXT.

The top half of the screen also displays diagnostic information. You can also change the Gate Speed, ODS, Overlap and Timer values by tapping your selection and either using the + or - icons, or by entering a new value with the keypad.

INPUT SCREEN

Tap the INPUT icon at the bottom of the screen to display the Accessory Input and Slave Command status of the V-Flex control board.

OPTIONS/COMMANDS SCREEN

In the options/commands screen, tap the OPEN, STOP or CLOSE icons at the top to operate the gate.

To reset the open or close limit of the gate, first tap the icon and the tap YES to clear the gate limit. Use the OPEN, STOP and CLOSE commands to position the gate at its new limit point, then tap the limit icon again. Tap YES to confirm the new gate limit.

To set the values of the Auto Open, Last Open, Pre-Warning or Sync features, tap the corresponding tab to the right of the feature and confirm by tapping OKAY.
