

Oversowing Green Couch Lawns with League Perennial Ryegrass

The Perennial Ryegrass Blend — when quality, performance and value are essential.

League Blend brings together the essential qualities required for a premium turf surface in the harsh Australia climate.

Sowing & Establishment:

For oversowing in couch with moderate existing cover, apply at 2-4Kg/100m².

*The rate can vary depending on the desired density.

During sowing activity, **LawnPride Starter Plus** should be applied at 3Kg/100m² to initiate rapid establishment.

OVERSOWING PREPARATION WORK

Seed contact with the soil is vital for germination

2 weeks to Rye	1 weeks to Rye	1 day to Rye	Rye Day	1 weeks post Rye
Reduce excess thatch by lowering mowing height and/or scarifying. This allows better seed contact with the soil.	Maintain lower mowing height. Apply Astro at 30mL/100m ² .	Apply LawnPride Starter Plus at 3Kg/100m ² .	Apply League Blend Ryegrass at 2-4Kg/100m ² . Lightly roll seeded area to ensure seed contacts the soil.	Seedlings begin to germinate.
			Frequent light irrigation required to keep soil moist during germination.	

Note: If you have applied a pre-emergent herbicide such as **OxaFert** in the previous 4-5 months or **Barricade** in the previous 6 months ryegrass seed germination can be affected.

MAINTENANCE

Mowing

League Perennial Ryegrass can be mowed as low as 10mm, however the recommended mowing height in most application is 25mm.

Fertiliser

Seasonal application of a balanced granular NPK fertiliser such as **LawnPride Maintain** is recommended to sustain a healthy sward.

LawnPride GreenXtra can be applied as needed to enhance turfgrass colour.

Plant Growth Regulator

Once established, **Astro Plant Growth Regulator** can be used on your ryegrass.
