Tranquility Water-To-Water (TBW) Series Features

The Tranquility Water-To-Water (TBW) Series

The TBW water to water series offers a wide range of units for most any installation with an extended range refrigerant circuit, capable of ground loop (geothermal) applications. As ClimateMaster's most adaptable EarthPure® HFC-410A refrigerant units, the TBW Series can be used for radiant floor heating, snow/ice melt, chilled water for fan coils, potable hot water generation (with hot water generator option), hot/chilled water for make-up air, and many other types of HVAC applications.

Available in sizes 036 [8.7 kW], 060 [13.5 kW] and 120 [26.9 kW] the TBW Series offers a wide range of units for most any installation. The TBW has an extended range refrigerant circuit, capable of ground loop (geothermal) applications as well as water loop (boiler-tower) applications. Standard features are many. Brazed Plate heat exchanger, refrigerant suction lines and all water lines are fully insulated to eliminate condensation problems in low temperature applications. Microprocessor controls, galvanized steel cabinet, powder coat paint, stainless steel front access panels, TXV refrigerant metering device, and water flow switches to safeguard brazed plated heat exchangers, are just some of the features of the flexible TBW Series.

ClimateMaster's exclusive dual level compressor isolation mounting system makes the TBW Series the quietest water-to-water unit on the market. Compressors are mounted on vibration isolation grommets to a heavy gauge mounting plate, which is then isolated from the cabinet base with rubber grommets for maximized vibration/sound attenuation.

The TBW Series water-to-water heat pumps are designed to meet the challenges of today's HVAC demands with a high efficiency, high value solution.

Application Flexibility

- Three Capacities 036 [8.7 kW], 060 [13.5 kW], & 120 [26.9 kW].
- Copeland scroll compressors.
- Dual refrigeration circuits on size 120.
- Galvanized steel construction with epoxy powder coat paint.
- Insulated compressor compartment.
- TXV metering device.
- Extended range (20 to 120°F, -6.7 to 48.9°C) operation.
- Microprocessor controls standard.
- 1" swivel-type water connections for models 036 & 060.
- Flush securely-mounted corner post water connections (no backup wrench required) for model 120.
- Compressor "run" and "fault" lights on the front of the cabinet.
- Seven Safeties Standard.
- Intended for closed loop (geothermal) applications only.

Service & Installation Advantages

- Three Removable access panels.
- Low profile control box grants easy access to all internal components.
- Factory installed liquid line filter/drier.
- EarthPure® HFC-410A zero ozone depletion refrigerant.

- Brass swivel-type water connections for quick connection and elimination of wrenches or sealants during installation (036, 060 models).
- Bi-directional thermal expansion valve.
- DXM control features status lights with memory for easy diagnostics.
- Circuit breaker protected 75VA control transformer.
- High and low pressure service ports on refrigerant circuit.
- Accurate refrigerant sensing low-temperature protection.
- Solid state DXM control features: Anti-short cycle, high & low pressure, loss of charge protection, LED fault, and status indication with memory for easy diagnostics.
- 24vac accessory relays.
- Strainers shipped loose for field installation in load and source water in lines.

Factory Quality & Certifications

- All units are built and factory run tested on our Integrated Process Control Assembly System (IPCS). The IPCS is a unique state-of-the-art manufacturing system that is designed to assure quality of the highest standards of any manufacturer in the water-source industry. Our IPCS system:
 - Verifies that the correct components are being assembled.
 - Automatically performs special leak tests on all joints.
 - Conducts pressure tests.
 - Performs detailed run test.
 - Automatically disables packaging for a "failed" unit.
 - Creates computer database for future service analysis and diagnostics from run test results.
- All units are water run-tested in all modes to insure efficiency and reliability.
- Heavy gauge galvanized steel cabinets are epoxy powder coated for durable and long-lasting finish.
- All refrigerant brazing is done in a nitrogen atmosphere.
- All units are deep evacuated to less than 100 microns prior to refrigerant charging.
- All joints are both helium and halogen leak tested to insure annual leak rate of less than 1/4 ounce.
- AHRI/ASHRAE/ANSI/ISO 13256-2 certified.
- ETL listed.
- US EPA "Energy Star" certified for GLHP applications.

Options & Accessories

- Hot water generator with internal pump.
- Geothermal pumping modules

Warranty

- ClimateMaster residential class heat pumps are backed by a ten-year limited warranty on all unit parts, including the following accessory when installed with ClimateMaster units: Flow Controllers.
- ClimateMaster goes even further to back up its commitment to quality by including a service labor allowance for the first five years on unit parts and geothermal pumping modules.
- The Optional Extended Factory Service Labor Allowance Warranty offers additional length of term protection to the consumer by offsetting service labor costs for 10 years.

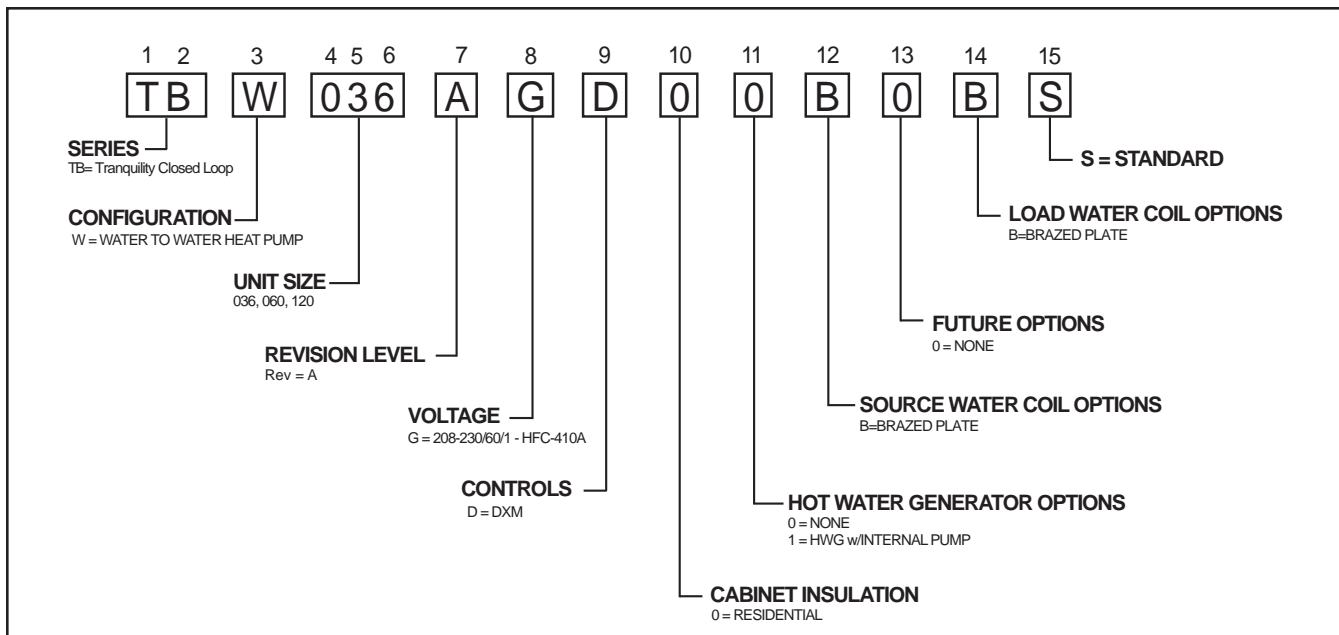

Tranquility Water-To-Water (TBW) Series

Tranquility Water-To-Water (TBW) Series Features

- 1 Copeland™ High Efficiency Scroll Compressor
- 2 Optional Hot Water Generator With Internal Pump
- 3 Fully Insulated Water and Refrigerant Lines
- 4 Fully Insulated Compressor Section
- 5 Powder Coated Steel Cabinet with Stainless Steel Access Panels For Long Life
- 6 System Operating LED Lights
- 7 Unit Performance Sentinel: Automatic Alert System Lets You Know If The System Is Not Running At Peak Performance
- 8 Dual Level Compressor Isolation Mounting for Ultra Quiet Operation
- 9 Multiple Removable Access Panels for Service
- 10 Brazed Plate heat exchangers

Unit Model Key

⚠ WARNING! ⚠

WARNING! TBW is for GROUND LOOP INSTALLATIONS ONLY. Installing TBW on open loop system will void warranty and unit will not be eligible for federal tax credit.

AHRI/ISO/ASHRAE/ANSI 13256-2 Performance

All ratings based upon 208V operation
Indoor coil also called "Load" and outdoor coil also called "Source"

Performance Data Selection Notes

For operation in the shaded area when water is used in lieu of an anti-freeze solution, the LWT (Leaving Water Temperature) must be calculated. Flow must be maintained to a level such that the LWT is maintained above 40°F [4.4°C] when the JW3 jumper is not clipped (see example below). Otherwise, appropriate levels of a proper anti-freeze should be used in systems with leaving water temperatures of 40°F or below and the JW3 jumper should be clipped. This is due to the potential of the refrigerant temperature being as low as 32°F [0°C] with 40°F [4.4°C] LWT, which may lead to a nuisance cutout due to the activation of the Low Temperature Protection. JW3 should never be clipped for standard range equipment or systems without antifreeze.

Example:

At 50°F EWT (Entering Water Temperature) and 1.5 gpm/ton, a 3 ton unit has a HE of 22,500 Btuh. To calculate LWT, rearrange the formula for HE as follows:

HE = TD x GPM x 500, where HE = Heat of Extraction (Btuh);
 TD = temperature difference (EWT - LWT) and GPM = U.S. Gallons per Minute.

$$TD = HE / (GPM \times 500)$$

$$TD = 22,500 / (4.5 \times 500)$$

$$TD = 10^\circ\text{F}$$

$$\text{LWT} = \text{EWT} - \text{TD}$$

$$\text{LWT} = 50 - 10 = 40^\circ\text{F}$$

In this example, as long as the EWT does not fall below 50°F, the system will operate as designed. For EWTs below 50°F, higher flow rates will be required.

Antifreeze Correction Table

Table Continued on Next Page

Interpolation is permissible, extrapolation is not
 All performance data is based upon the lower voltage of dual voltage rated units
 Operation below 40°F EWT is based upon 15% methanol antifreeze solution
 See performance data notes for operation in the shaded areas. Calculation to determine
 percentage of antifreeze required on source side.
 Performance stated is at the rated power supply, performance may vary as the power supply
 varies from the rated

				130	Operation not recommended																				

Interpolation is permissible, extrapolation is not
 All performance data is based upon the lower voltage of dual voltage rated units
 Operation below 40°F EWT is based upon 15% methanol antifreeze solution
 See performance data notes for operation in the shaded areas. Calculation to determine percentage of antifreeze required on source side.
 Performance stated is at the rated power supply, performance may vary as the power supply varies from the rated

Interpolation is permissible, extrapolation is not
 All performance data is based upon the lower voltage of dual voltage rated units
 See performance data notes for operation in the shaded areas. Calculation to determine percentage of antifreeze required on load side.
 Performance stated is at the rated power supply, performance may vary as the power supply varies from the rated

Table Continued on Next Page

Interpolation is permissible, extrapolation is not
 All performance data is based upon the lower voltage of dual voltage rated units
 Operation below 40°F EWT is based upon 15% methanol antifreeze solution
 See performance data notes for operation in the shaded areas. Calculation to determine
 percentage of antifreeze required on source side.
 Performance stated is at the rated power supply, performance may vary as the power supply
 varies from the rated

Interpolation is permissible, extrapolation is not
 All performance data is based upon the lower voltage of dual voltage rated units
 See performance data notes for operation in the shaded areas. Calculation to determine percentage of antifreeze required on load side.
 Performance stated is at the rated power supply, performance may vary as the power supply varies from the rated

130				OPERATION NOT RECOMMENDED																								

Interpolation is permissible, extrapolation is not
 All performance data is based upon the lower voltage of dual voltage rated units
 Operation below 40°F EWT is based upon 15% methanol antifreeze solution
 See performance data notes for operation in the shaded areas. Calculation to determine percentage of antifreeze required on source side.
 Performance stated is at the rated power supply, performance may vary as the power supply varies from the rated

Tranquility Water-To-Water (TBW) Series

Dimensions - TBW036, TBW060 & TBW120

TBW 036, 060

Notes:

1. Front & side access is preferred for service access. However, all components may be serviced from the front access panel if side access is not available.
2. While clear access to all removable panels is not required, installer should take care to comply with all building codes and allow adequate clearance for future field service.

Accessories & Warranty

Accessories & Options

Hot Water Generator

The optional Hot Water Generator includes an insulated double wall vented heat reclaiming heat exchanger suitable for potable water. The heat exchanger coil and hot water circulating pump are factory mounted internal to the unit. The microprocessor Hot Water Generator control uses sensors to monitor the entering potable water temperature and the compressor discharge line temperature and allows the Hot Water Generator to operate any time conditions permit. The Hot Water Generator includes a pump sampling mode to sense the hot water storage temperature while the Hot Water Generator is inactive.

Flow Controller (field installed)

A self-contained module shall provide all fluid pumping, fill and connection requirements for ground-source closed-loop systems up to 20 GPM. The Flow Controller shall provide 1" pump isolation valves and 3-way service valves. Pump heads shall be removable from the volute for easy replacement. The Flow Controller shall be enclosed in a polystyrene case and fully insulated with urethane foam to prevent condensation. The Flow Controller shall have a 5-year warranty on all parts.

Hose Connection Kit (field installed)

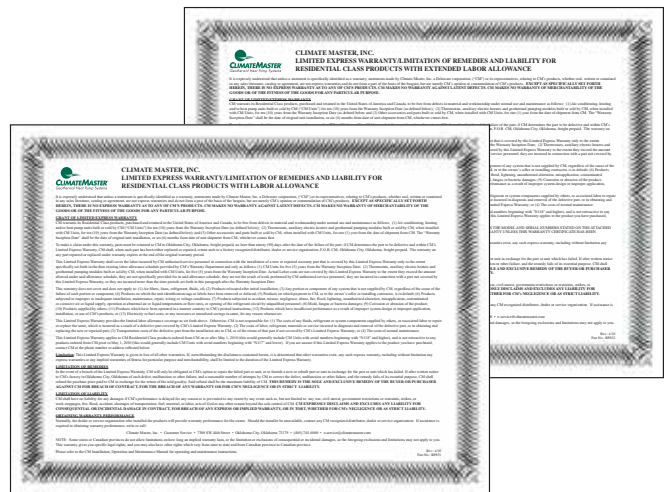

An accessory hose kit shall provide 150psi 1" rubber hose with brass fittings equipped with service pressure/temperature ports for connection between the unit and Flow Controller.

ClimateMaster goes even further to back up its commitment to quality by including a service labor allowance for the first five years on unit parts and thermostats, auxiliary electric heaters and geothermal pumping modules.

See ClimateMaster's 2010 Limited Express Residential Warranty Certificate RP851 for specific coverage and limitation.

The Optional Extended Factory Service Labor Allowance Warranty offers additional length of term protection to the consumer by offsetting service labor costs for 10 years.

To order this warranty, contact your ClimateMaster distributor. This coverage must be purchased within 90 days of unit installation. See Limited Express Extended Labor Warranty Certificate RP852 for details.

Warranty Information

ClimateMaster residential class heat pumps are backed by a ten-year limited warranty on all unit parts, including the following accessory when installed with ClimateMaster units: Geothermal Pump Modules.
