ABOUT BLACK HAWK

Black Hawk Electric was founded by two brothers on the Gold Coast (Australia) in 2016 following on from the success of an electric bike company that is still thriving to date as the leader in electric bike conversion kits in Australia and abroad.

This experience in the electric vehicle/recreational vehicle industry extends across a decade having sold 10,000+ electric bikes and electric bike conversion kits around the world.

The knowledge gained during this journey has formed a truly unique basis from which Black Hawk Electric has developed its core products. Reliability and safety are at the forefront of our product development.

Staying ahead of the game by utilizing the latest in proven electric vehicle technology results in exciting, fun products that are a pleasure to own.

Recent improvements in hub motor technology (taken mostly from the e-bike industry) together with improved lithium battery technology has created a golden moment in the industry as we seek to take advantage of these improvements by implementing them into our products.

Our mission is to offer the best products on the market, at wholesale prices and with excellent warranty support from people who care about the products and most importantly, our customers.

- Black Hawk Electric Team

ELECTRONICS

Hub drive motors boast an endless list of positive attributes over older belt-driven boards. These include benefits such as the following: No maintenance, no adjustments, no loss of traction, less noise and smooth remote feedback which means no sudden 'jerky' movements.

Our hub drive motors have been further improved and customised to our specification. Our boards have the ability to change your wheel skins after an impressive lifetime of up to 12 months.

Featuring LG manufactured 18650 battery cells across our entire range, we're proud to partner with a reputable brand to power our boards.

The 18650 battery cell has become more and more popular on the light electric vehicle scene since 2012.

Recent advancements in capacity and quality means that our batteries are more compact than ever, adding to the aesthetics of your board.

CHASSIS

The next most important requirement after an impressive drive train is the running gear. In particular, the trucks and hardware required for the best possible performance.

In the case of our brand new Mtn Series we include as standard, highly customisable double kingpin trucks. With more adjustability and smoother carving, you'll feel like your snowboarding or surfing down your local paths or parks.

In addition to quality hardware, our bamboo decks are now all designed and manufactured with a concave shape. This delivers the best possible grip and comfort while riding in any situation.

Our intermediate models, (Pro Series & Mtn Series) also feature a raised spine through the centre of their decks. This combined with the concave shape makes for an optimal riding platform that still gives great flexing ability.

URBAN SERIES V3

Our much-loved entry level board caters for first timers and younger riders looking to get started with their first electric skateboard.

Designed for an urban environment and optimised for practicality, size and weight; The Urban Series features a 400W Hub Motor that is powered by a 2.2Ah LG Lithium-Ion battery. This powertrain is perfect for short trips around town or getting to and from other transport.

The Urban Series riding experience is further enhanced thanks to its kick-tail which provides the ultimate in manoeuvrability in close quarters.

ELECTRIC

SPORTS SERIES V3

The Sports Series V3 joins the Black Hawk range following on from the success of the Pro Series V3. The Sports Series V3 features a compact, yet equally powerful drivetrain that comes from the Pro Series V3. Designed for experienced riders, the Sports Series V3 is perfectly suited for fast-paced commuting, now with a shorter deck and a lighter overall weight.

Featuring 2 x high torque 1500W (3000W total) Hub Motors that are powered by a 6.6Ah LG Lithium-Ion battery. Also introduced are a set of two carry handles integrated into the deck itself; Adding to the board's practicality and functional purpose.

The Pro Series V3 is our most powerful and highest performing board ever built. Designed for experienced riders, the Pro Series is perfectly suited for fast-paced commuting. Turn your boring journey's into thrill-rides that are worth looking forward to with this untamed beast.

Featuring 2 x high torque 1500W (3000W total) Hub Motors that are powered by a 6.6Ah LG Lithium-Ion battery. The Pro Series is capable of blistering top speeds up of to 35km/h and distances of up to 25km on one charge.

Be warned, this kind of power under your feet and in your hand can get very addictive.

AT SERIES V3

Welcome to the ultimate riding experience; Plenty of power and awesome off-road capability.

After several years of research and development, trial and error, our third generation of All Terrain Series is finally available. The AT Series features 2 x 1000W (2000W total) Hub Motors that are powered by a 6.6Ah LG Lithium Ion battery.

This monster is built to be tough and rugged, featuring double kingpin trucks for the most enjoyable carve possible. We're sure you will love it as much as we do.
