

TESTER 1008

Pavone Sistemi
pesatura elettronica industriale

ELECTRONIC INSTRUMENTATION

Why buy it

1. immediate control of the correct mechanical installation and related electrical connections.
2. rapid diagnosis of faults: times required are very short.
3. calibration function; the Tester 1008 generates signals in mV / V to calibrate the instrument used for weighing.
4. possibility to store the peak value.
5. the product comes with a set of cables for fast connection.
6. automatic reading of the input resistance of the load cells (350 - 700 - 1000 - 2000 Ohm).
7. store the load cell values of 0 and FS both in mV/V and weight.

TESTER 1008

**Incredible device,
a real must have.**

The Tester 1008 if used with Pavone Sistemi devices allows to store data up to 100 weighing systems which can be downloaded on the PC. They can be recalled and managed for any repairs WITHOUT removing the load on the cells.

For the simultaneous control of up to 4 load cells in any weighing system.

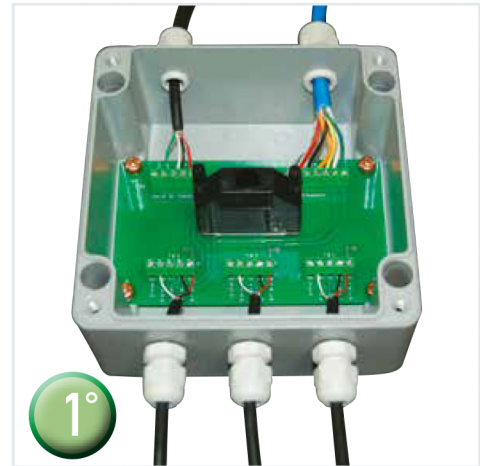

Function: calibrator and peak detector.

Upload and download function for DAT and MCT series configuration.

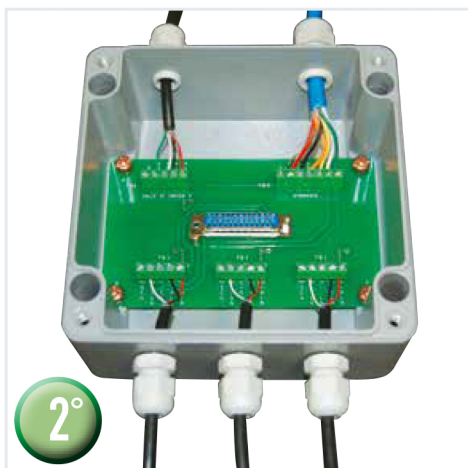

EXAMPLE OF TESTER 1008 APPLICATION WITH PAVONE SISTEMI JUNCTION BOX

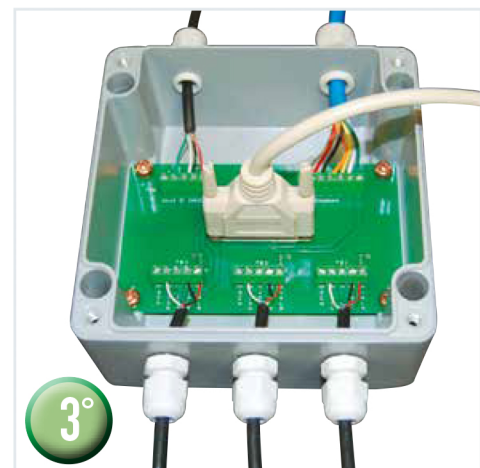

Start

Open the junction box and ...

... unplug the connector

Connect the Tester cable and make measurements

Once finished the measurements disconnect the cable from the Tester then plug-in the connector in its place (1°) to restore the original configuration.
