

## 100 LITRE MEGA BENTONITE CLAY

### **Mixing Instructions:**

1. Empty the powder into a mixing bucket. Add 100 litres (20 gallons) of warm water and mix for about 10 minutes, ensuring all the powder combines with the water.

*Ensure you get right to the very bottom of the container otherwise the powder will congregate & not mix correctly.*

2. When you're happy the powder has been incorporated, leave overnight to continue absorbing the water.

*Check on the Bentonite regularly to ensure the powder is evenly absorbing the water. Regularly stir.*

3. Should you wish to thin your Bentonite, simply add water and thoroughly stir.

*Once mixed, the liquid Bentonite Clay can be stored and reused for a couple of weeks.*

---

### **Handy Tips & Advice:**

- The Bentonite Clay powder will continue to absorb water for as long as it is left.
- The mixture may look lumpy to begin with, but the lumps will eventually dissipate when left overnight.
- Mixing by hand helps remove lumps and ensures greater control when mixing. A drill attachment can also be used to mix the Bentonite, but do not use an electric hand mixer.

---

### **Cleaning of Clothes, Hair & Skin:**

Before washing your clothing, remove any excess gunge. Gunge naturally dilutes in water, so the quickest and easiest way to do this is in the shower while cleaning off. Using our **Easy Mess Removers** clean off is effortless! Just wash as usual!

To prevent staining, wash clothing shortly after use. Do not let the clothing dry before washing as this could cause the clothes to stain.

### **Floor & Surface Protection:**

We recommend you protect your environment by laying tarpaulin, dust sheets or towels. Some surfaces will become slippery during and after use, so anti-slip matting is also advised.

If spillages do occur, remove the excess liquid and carefully rinse with warm soapy water and any, if needed, household stain remover.

---

### **Disposal:**

Bentonite is biodegradable and environmentally friendly. Disposal is quick and easy. Dilute with plenty of water and pour down the drain/toilet. DO NOT dispose into a Septic Tank.

To prevent temporary blockages, be sure to use plenty of water when diluting.

---

### **Safety:**

Safety checks before use is advised to ensure all hard objects, exposed electrical points and any potential hazards have been secured. Always supervise children. If irritation occurs, rinse with warm water.
