

## How to Make 100 Litres of Bentonite Clay

*Note: For smooth clay you will require an electric hand-held mixing device such as a paint mixer / drill attachment*

### **Mixing Instructions:**

1. Using the mixing device, sprinkle the Bentonite powder into the 100-litre container of moving water.

*If mixing in different quantities, ensure the correct amount of water is used. E.g., half a pack = 50 litres water*

2. Mix until all the powder has been absorbed and the clay appears smooth.

*It may appear thin at first but leave overnight and the liquid Bentonite Clay will thicken considerably.*

3. Leave the liquid Bentonite Clay overnight to settle and thicken. Stir before use.

---

### **Handy Tips & Advice:**

- The Bentonite Clay powder will continue to absorb water for as long as it is left. If it's too thick, just add more water.
  - The instructions will make a smooth texture. Should you require lumpy Bentonite, use your hand instead of an electric hand-held mixer.
- 

### **Cleaning of Clothes, Hair & Skin:**

Before washing your clothing, remove any excess gunge. Gunge naturally dilutes in water, so the quickest and easiest way to do this is in the shower while cleaning off. Using our **Easy Mess Removers** clean off is effortless! Just wash as usual!

To prevent staining, wash clothing shortly after use. Do not let the clothing dry before washing as this could cause the clothes to stain.

### **Floor & Surface Protection:**

We recommend you protect your environment by laying tarpaulin, dust sheets or towels. Some surfaces will become slippery during and after use, so anti-slip matting is also advised.

If spillages do occur, remove the excess liquid and carefully rinse with warm soapy water and any, if needed, household stain remover.

---

### **Disposal:**

Bentonite is biodegradable and environmentally friendly. Disposal is quick and easy. Dilute with plenty of water and pour down the drain/toilet. DO NOT dispose into a Septic Tank.

To prevent temporary blockages, be sure to use plenty of water when diluting.

---

### **Safety:**

Safety checks before use is advised to ensure all hard objects, exposed electrical points and any potential hazards have been secured. Always supervise children. If irritation occurs, rinse with warm water.
