

## How to Make 100 Litres of MEGA Xanthan Gum

*Note: You will require an electric hand-held mixing device such as a paint mixer / drill attachment to mix this gunge.*

### **Mixing Instructions:**

1. Begin the mixing device. Slowly sprinkle the Xanthan powder into the 100 litres of warm water.

*If mixing in different quantities, ensure the correct amount of water is used. E.g., 2x packets = 20 litres water*

2. Keep mixing ensuring all powder has been consumed. The water will gradually thicken after 5 minutes.

*Move the mixer about, ensuring the powder doesn't congregate or form lumps.*

3. Allow the gunge to settle & cool for at least 10 minutes. Check the temperature before use.

*If the gunge is too thick, add a little warm water and stir briskly to thin down the gunge.*

---

### **Handy Tips & Advice:**

Xanthan Gum tends to clump when added to water, here are a couple of tips to help with your mixing.

- Xanthan mixes best with hot water. Allow the gunge to cool and check the temperature before using!
- Try sieving the powder into the water, while agitating with an electric mixer.
- Mix the powder with a little food oil until a slurry has formed. This is then easily poured into the water.

---

### **Cleaning of Clothes, Hair & Skin:**

Before washing your clothing, remove any excess gunge. Gunge naturally dilutes in water, so the quickest and easiest way to do this is in the shower while cleaning off. Using our **Easy Mess Removers** clean off is effortless! Just wash as usual!

To prevent staining, wash clothing shortly after use. Do not let the clothing dry before washing as this could cause the clothes to stain.

### **Floor & Surface Protection:**

We recommend you protect your environment by laying tarpaulin, dust sheets or towels. Some surfaces will become slippery during and after use, so anti-slip matting is also advised.

If spillages do occur, remove the excess liquid, and carefully rinse with warm soapy water and any, if needed, household stain remover.

---

### **Disposal:**

Xanthan gunge is naturally biodegradable and environmentally friendly. Disposal is quick and easy. Dilute with plenty of water and pour down the drain/toilet.

To prevent temporary blockages, be sure to use plenty of water when diluting.

---

### **Safety:**

Safety checks before use is advised to ensure all hard objects, exposed electrical points and any potential hazards have been secured. Always supervise children. If irritation occurs, rinse with warm water.
