

How to Make 10 Litres of Natrosol Gunge

Mixing Instructions:

1. Empty the powder into a mixing bucket. Add 10-12 litres of hot water and mix with your hand, ensuring all the powder combines with the water.

Ensure you get right to the very bottom of the container otherwise the powder will congregate & not mix correctly.

2. After about three minutes, the gunge should have formed. Providing all the powder has combined, allow the gunge to thicken for 5-10 minutes. Check the temperature before use.

If the gunge is too thick, add a little warm water and stir briskly to thin down the gunge.

Handy Tips & Advice:

- If easier, place the bucket underneath the tap and run the water directly into the bucket. Be sure to mix straightaway with your hand to prevent lumps forming.
- Natrosol mixes better with hot water. If using very hot water, use a spoon/stirrer, but not an electric mixer. Be sure to check the temperature before use!
- If lumps do form, either remove using a sieve or spoon and place in the bin. Or, using an electric hand mixer, whizz the gunge until the lumps have separated. This may cause the gunge to lose a little consistency.

Cleaning Clothes, Hair & Skin:

Before washing your clothing, remove any excess gunge. Gunge naturally dilutes in water, so the quickest and easiest way to do this is in the shower while cleaning off. Using our **Easy Mess Removers** clean off is effortless! Just wash as usual!

To prevent staining, wash clothing shortly after use. Do not let the clothing dry before washing as this could cause the clothes to stain.

Floor & Surface Protection:

We recommend you protect your environment by laying tarpaulin, dust sheets or towels. Some surfaces will become slippery during and after use, so anti-slip matting is also advised.

If spillages do occur, remove the excess liquid, and carefully rinse with warm soapy water and any, if needed, household stain remover.

Disposal:

Natrosol is naturally biodegradable and environmentally friendly. Disposal is quick and easy. Dilute with plenty of water and pour down the drain/toilet.

To prevent temporary blockages, be sure to use plenty of water when diluting.

Safety:

Safety checks before use is advised to ensure all hard objects, exposed electrical points and any potential hazards have been secured. Always supervise children. If irritation occurs, rinse with warm water.
