- (1) Eyelet
- Stabilizer
- Masking Tape

Materials Key

Stabilizer Front

Stabilizer Back

Vinyl for front

Vinyl for front backing

Vinyl for pocket

1) Run step one of the design directly on stabilizer to run placement stitches. Place Vinyl for front on top of placement stitches, making sure all stitching is covered by vinyl. Run step 2 of design to tack down front Vinyl.

2) Run step 2 of design to tack down front Vinyl. Run all “design” steps, to stitch the design on the front of your vinyl. The number of steps will vary depending on the design. If you are NOT stitching any design on your case, then skip to step 3.

3) Run all “design” steps, to stitch the design on the front of your vinyl. The number of steps will vary depending on the design. If you are NOT stitching any design on your case, then skip to step 4.

4) Flip the hoop over and place the vinyl for the front backing over the stitches on the back of the hoop. Make sure all stitches are covered and secure vinyl in place with tape. Return hoop to machine. Run the next step to tack down the vinyl.

5) Run the next step to stitch the placement lines for the back pocket.

6) Remove hoop from machine. Take the Vinyl for pocket and place the top edge of the vinyl at the placement lines. Secure in place with tape and return hoop to machine. Run the last step to secure pocket and finish case.

7) Remove from hoop and trim case, about 1/4" from stitching. Install Kam snaps (for snap version) to the top of the tap and top of the back pocket. For eyelet version install eyelet at the top.
