

# NOSY PEPPER

*Embroidery*

## Patch Tutorial

# Materials Required:

- (2) 5" x 5" Pieces of felt or patch twill.
- Stabilizer (HEAVY water soluble such as badge master is recommended)
- Applique Scissors.

## Materials Key

Front Felt

Backing Felt

Stabilizer Front

Stabilizer Back

1) Hoop stabilizer and run the first step to stitch out placement stitches directly on stabilizer.

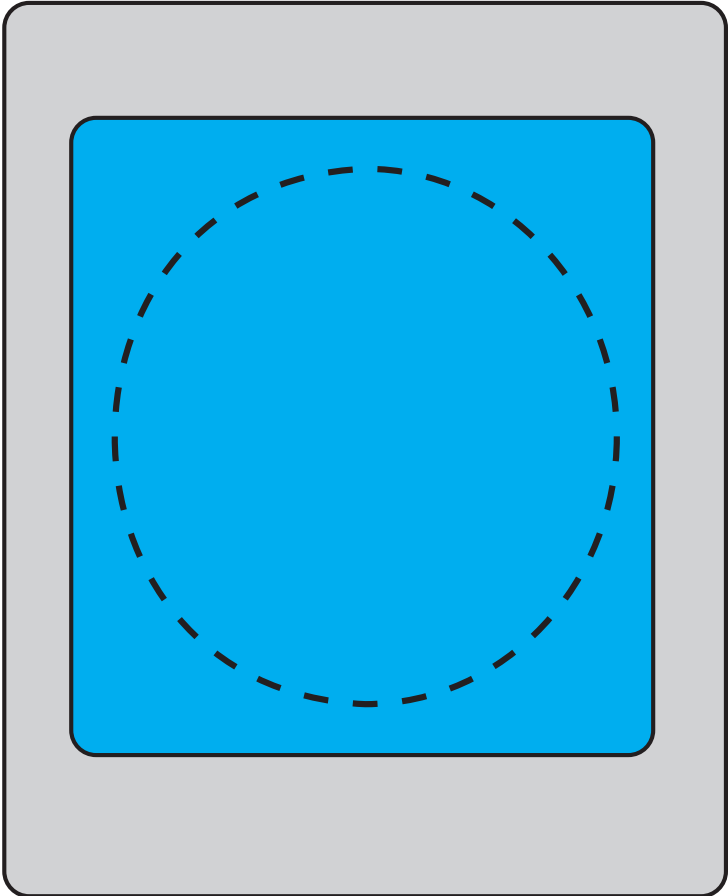

2) Place one 5" x 5" piece of felt directly over top of placement stitches on the front of your hoop. Secure in place and run the design portion of the patch. The actual number of steps will vary by design.

**\*NOTE: Most patches have a heavy fill set as the background. If you would like to reduce the overall stitch count for a faster stotchout, you can skip the background fill. When skipping the background fill, the material will be visible on the background of the patch\***

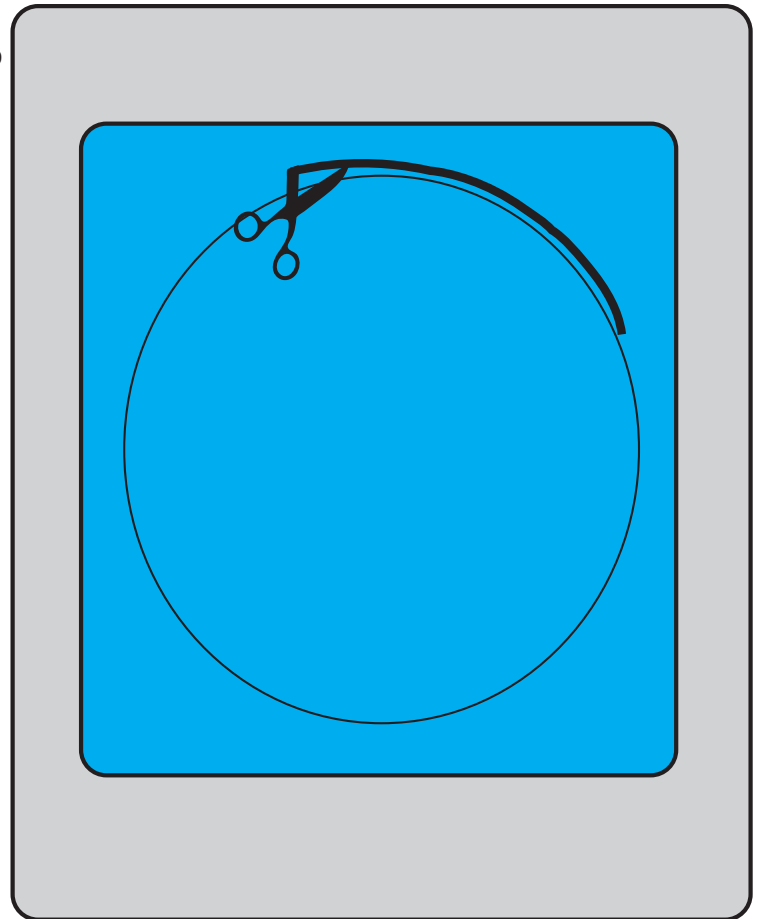

3) Once the design is finished stitching on the front, remove hoop from machine, flip hoop over, and place the other 5"x5" piece of felt on the backside of your hoop. Secure in place and run the next step to tack down the backing.

4) Remove hoop from machine but do NOT unhoop materials. From here we are treating the patch as if we are making an applique. Starting on the front of your hoop, using applique scissors, trim excess materials from the patch, Trim as CLOSE as you can to the stitching as possible WITHOUT cutting into the stitches.

5) Flip hoop to the backside and repeat step 4 to trim excess material from the back.

6) Return hoop to machine and run the final step. This is the satin edge on the patch. Un-hoop materials and remove excess stabilizer. If using cut away, you can carefully use a lighter to burn off any visible stabilizer, just be sure to not melt the thread by hovering too long over one area.
