Rutland™ LC0550 CHILL LC BARRIER GREY

LC0550 Barrier Grey is an under base product designed to block unstable garment dyes from migrating into a Chill top white or Chill top colors on the very worst dyed fabrics or poly garments that are dye sublimated with patterns such as Camo and Digi-Camo. Chill products cure as low as 270°F/132°C for printing on polyester garments produced with unstable dyes or are prone to shrinkage when exposed to heat.

Highlights Printing Tips Lower cure temperatures allow for better control on fabrics Adjust flash cure temperature and dwell time so ink is just dry that may shrink or distort under higher temperatures to touch. Avoid excessive flash temperatures to protect fabric and migration of dyes. Works well on manual or automatic presses Use 86-110t/in mesh screens for best performance and Shears down quickly to a creamy, smooth body opacity Excellent bleed resistance at a wide temperature range, low For printing under a white or color over-print it is typical to cure (270°F/132°C) with maximum cure of 320°F/160°C print two strokes of Chill Barrier Grey, flash until dry to the Energy savings and cooler operating temperatures touch, and then print white or colors over the barrier under base, flashing as needed. Adjust your print parameters to allow this ink to clear fully on the second stroke using medium to low pressure for best dye blocking and opacity. As this ink shears down, less pressure **Compliance** will be required. Adjust accordingly. Non-phthalate Curing is a time and temperature process. Using a lower temperature, at a lower belt speed will provide the best result Internationally compliant without damaging the fabric. Visit www.rutlandinc.com for more information A behavior for high-opacity low cure inks is to "body-up" or gain viscosity when at rest. Be sure to "Pre-shear" or agitate **Precautions** this ink before use to achieve optimal flow before printing. Be careful to not use high-speed drills or similar equipment that The information provided in this document is given in good faith will create friction-heat that can cause the ink to begin to and does not release you from testing inks and fabrics to confirm cure. Store ink buckets up off of cold floors to reduce presuitability of substrate and application process to meet your

Recommended Parameters

customer standards and specifications

Fabric Types

100% Polyester, Poly blends

Flash & Cure

Flash: 150° F (66° C)

Cure: 270°-320° F (132° -160° C)

Clean Up

Non-phthalate press wash

Mesh

Count: 86-110t/in Tension: 18-35n/cm3

Pigment Loading

N/A

Health & Safety

Find SDS information here: www.avient.com/resources/safetydata-sheets or contact your local CSR

Squeegee

Durometer: Medium: 60-70, 60/90/60

Profile: sharp, square

Stroke: 2 stroke, medium speed

Angle: 10° -20°

Additives

Standard Emulsion Off Contact: 1/16" (2mm) Emulsion Over Mesh: 15-20%

Storage

65°-90°F (18°-32°C) Avoid direct sunlight. Use within one year of receipt. Keep container well sealed.
