

The Revolutionary New Seating Option for Aligners

Clenchy™ is a revolutionary new seating option for patients being treated with clear aligners. Developed from the need for a more comfortable and efficient way to remove airgaps between patients teeth and clear aligner trays, Clenchy is easier to hold and chew than other available options. Its elongated design with both curved and flat surfaces effortlessly sets ortho aligners into place. The developer of Clenchy, IDM Tooling, has been creating innovative products, building injection molds and producing plastic parts for over 40 years.

Clenchy outperforms other seaters.

Innovative Design

Dual-sided surfaces in firm, flexible material provides an easy chewing option for orthodontic patients. Clenchy is made of FDA approved thermoplastic polyurethane.

Improved Performance

Comfortably and efficiently closes airgaps between patients' teeth and clear aligners.

Hygienic and Long Lasting

Does not retain moisture and bacteria and lasts patients longer than comparable products that lose their elasticity over time.

CLENCHY ALIGNER SEATERS 2 seaters per individual patient pack
