Guarantee back cover

Garrison® sectional matrix systems are the standard of care.

Tofflemire-style System

- Fails to restore proximal anatomy
- Thin contact at the marginal ridge
- Large food trap (below)
- Increased likelihood of fracture, occlusal interference, recurrent caries and periodontal disease

Strata-G™ Sectional Matrix System

- + Operator-friendly retaining system
- + Naturally contoured bands
- + Anatomically correct contacts
- + Contacts at the height of contour
- + Rings produce optimal tooth separation for excellent, tight contacts

Now faster and more predictable!

Reliable, tight contacts

Drawn-wire nickel titanium plus PEEK produces consistent separating pressure longer!

Easier, more predictable contours

Marginal ridge enhancements built into the matrix bands AND rings help provide that finishing flair!

Faster, less frustrating Class IIs

The Strata-G™ rings, bands and wedges combine for a 270° Seal™ for ultimate flash control. The rings won't spring off the tooth, and the amazing Wide Preparation ring makes tough wide preps no problem.

Garrison® sectional matrix systems are the standard of care.

Garrison® Sectional Matrix Cases

Great adaptation to the teeth eliminates the need for adjustment with polishers in the proximal areas.

Images courtesy of Dr. Javid Muraslov, Latvia

Wide preps can be handled in one simple step when you have the right (green) ring.

Images courtesy of Dr. Clarence Tam, HBSc, DDS, FIADFE, AAACD, Auckland, New Zealand

Back-to-back requires a shift in technique—we can show you how.*

The Award Winning Sectional Matrix System

TESTIMONIALS

David Naegele, DMD
(The Strata-G™ ring)
created a much better seal on the prep for moisture control, and minimal, if any, flash. Strata-G™ bands produced clear marginal ridges as I've never seen before. Finishing time for the restoration is GREATLY reduced.

Nick Romenesko, DDS
The rubber feet of the (Strata-G™) rings help reduce flash, create a better seal around the box and my marginal ridge roll is excellent. Since receiving Strata-G™ it is the only system I use... I would cry if someone took it away.

Steven Berwitz, DMD

I have used various sectional matrix systems from Garrison®, and I like this one the best. There is a significant reduction in flash and the contours of the restorations are ideal. The contacts made by this system are great!

STRATA-G™

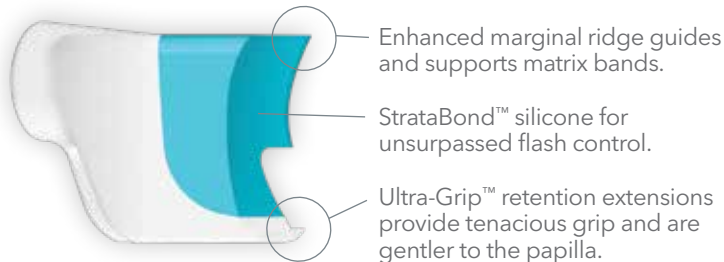

Strong tooth separation yet easier to open!

Nitinol drawn-wire nickel titanium is aligned at the molecular level for superior performance yet requires less effort to open. Garrison's proprietary StrataSet™ treatment maximizes the longevity of this advanced material.

More uses!

The PEEK ultra-durable reinforcement on the back of the ring allows Strata-G™ to retain a higher percentage of initial strength for much longer than non-reinforced rings. Proprietary StrataBond™ silicone/PEEK tips withstand hundreds of applications.

Improved anatomy—Unbeatable grip

Wider indications—wider smiles!

Conserve more of your patient's natural tooth structure with dentistry's premier Wide Preparation ring. The Strata-G™ Wide Preparation ring (green) provides a more conservative alternative for severely broken-down teeth.

Strata-G™ forms a 270° Seal™ for ultimate flash control.

STRATA-G™

faster—more predictable—flash control

SGR-KSH-11 kit contains:

- 1 Universal/Short Ring (blue)
- 1 Tall Ring (orange)
- 1 Wide Prep Ring (green)
- 50 Assorted Matrix Bands
- 50 Firm Matrix Bands
- 10 VariStrips™
- 80 Assorted Ultra-Adaptive Wedges
- 12 Assorted Rally™ Polishers (pg 20-21)
- 1 Ring Placement Forceps (pg 37)
- 1 BFA-1 Band Placement Forceps (pg 36)
- 1 TN009 Multi-Function Instrument (pg 38)

Item

- SGR-KSH-11
- SGR-KSH-10 (BFA-1 and TN009 not in kit)
- SGR-KSH-14 (TN009 not in kit)

For refill information on Strata-G™ rings, bands, and wedges, refer to pages 6, 9 and 12.

STRATA-G™

Longer lasting by design.

Advanced materials and design combine to produce our longest lasting, most predictable separator ring ever!

All-New Separator Rings.

- The Strata-G™ Universal/Short ring (blue) can easily grip the distal of the canine, short or malpositioned teeth and even primary teeth. The Universal ring can help you restore the widest range of cases in dentistry.
- The Strata-G™ Tall ring (orange) provides ideal matrix band adaptation and separation on taller teeth. Additionally, it is perfect for stacking over the Universal ring (blue) for MODs or multiple tooth restorations.

Dentistry's Premier Wide Preparation Ring.

- The Strata-G™ Wide Preparation ring (green) allows you to conserve more of your patient's natural tooth structure. It provides a more conservative alternative than typical indirect restorations for severely broken-down teeth. Treat these cases as an extra-wide Class II rather than a complete crown prep with the confidence of knowing that you will achieve excellent contact and contour.

Case using Firm Matrix Bands

Dr. Anand Narvekar (Mumbai, India) utilized Garrison® Firm Bands for deep margin elevation in this challenging onlay case.

Figure 1. FXH300 large molar band with extension was placed. The wedge was wrapped with multiple layers of teflon tape to sufficiently increase its size to allow it to seal the cervical portion of the matrix band in this extremely wide interproximal space.

Figure 2. Cervical area was built up with multiple layers of composite.

Figure 3. The process was repeated for the adjacent molar. The stiff nature of Firm Bands allows apical pressure to be applied to the band without deformation of the matrix. It can be seated deeper than dead soft matrices for these types of procedures.

Figure 4. One-week post-bonding of onlays.

STRATA-G™

Anatomy top to bottom

Five sizes of super-thin stainless steel in both dead-soft and firm ensure you have the best matrix band to restore every case.

Optimized marginal ridge

Strata-G™ Bands provide shape and guidance for developing the marginal ridge of Class II restorations without blocking your access.

ProfileBooster™ subgingival apron

Achieving a natural emergence profile in challenging cervical areas is easy with Strata-G™ Bands—it's built right in!

- Non-stick and color coded
- Easy placement tabs
- Dead-soft and only 0.0016" thin
- NEW pedodontic size!

STRATA-G™

Flexibility for a better cervical seal!

Strata-G™ Wedges utilize Soft-Face™ materials and advanced design to promote a better fit.

Stack them up.

The smooth tunnel design accommodates stacking of wedges. This feature is extremely helpful in cases of gingival recession or when simultaneous wedging from the buccal and lingual is desired.

Gentle on the papilla.

Smooth tunnel design and rounded edges glide over the papilla with less trauma.

No back-out.

Soft retentive fins smoothly fold down during wedge insertion and spring back when clear of the interproximal space, locking Strata-G™ Wedges in place.

A better fit by design.

The thoughtful design and advanced materials of Strata-G™ Wedges promote a better cervical seal.

The hollow underside sits lower and seals deeper interproximally, while the soft fins allow Strata-G™ Wedges to adapt to concavities and irregularities.

FENDERWEDGE®

Interproximal Tooth Shields

Pre-separate and Protect

FenderWedge® prevents damage to the adjacent tooth and gingiva that can occur during Class II preparations.

FenderWedge® is a combination of a steel plate and a plastic wedge. Inserted into the interproximal space, it protects the tissue and separates the teeth, thus simplifying the application of a matrix.

FenderWedge®

Description
FenderWedge® Kit

Item Qty.

| Large Yellow | TSYL-M | 30 | TSYL | 60 |

FenderWedge is NOT a sectional matrix system nor does it replace the use of a matrix band.

Clinical Tip

Place FenderWedge® prior to preparation to pre-separate and protect the adjacent teeth.

The plastic wedge—not just the metal shield—should firmly engage the interproximal surfaces of the teeth. This will provide the optimum pre-separation force and hold the FenderWedge® securely in place (Figures 1 and 2).

Figure 3 clearly shows marks from the bur along the shield. Much better to have those on the shield than on the adjacent tooth!

Once the preparation is complete, remove the FenderWedge® and place your matrix.

IPR Management in Clear Aligners Therapy

Dr. Tommaso Weinstein, DDS, PhD

Interproximal space management is a very important issue in clear aligners therapy. This case presented crowding in upper and lower arches. It was treated with clear aligner therapy through a digital planification.

The interproximal reduction (IPR) was carefully planned. The multiple thicknesses of FitStrip™ allowed IPR to be performed with predictability and control. The patient reported excellent comfort during the procedure, better than what was reported with traditional strips.

Fig 4-7. Digital planification, before (4 and 5) and after (6 and 7). Numbers refer to IPR required.

Fig 1, 2 and 3. Initial situation, upper and lower arch.

Fig 8. Use of FitStrip™ for IPR.

Fig 9. Clear aligners in place. **Fig 10 and 11.** Direct composites on incisal edges.

Fig 12 and 13. Final result in upper and lower arch.

Flexible Interproximal finishers with a Twist

FitStrips are a complete line of interproximal trimmers and finishers from the company that invented tight interproximal contacts, **Garrison® Dental Solutions**.

Do the Twist! Twist the color-coded barrel to adjust FitStrips' curvature and it's automatically locked in place.

One handy handle! FitStrip's simple, attachable handle makes a world of difference for both clinician ease-of-use and patient comfort.

Ready for a marathon!
FitStrips are very durable and long lasting. They stay sharp and ready to go even after multiple autoclave cycles.

Starts bold – finishes clean

1. Medium grit for fast removal
2. Fine grit smooths things out
3. Super fine strips put the perfect finishing touch on things

FitStrip™ Kit
Comparison
What FitStrip Kit
Should I Use?

Flexible
Interproximal finishers with a
Twist

The FitStrip™ kit that started it all!

- Primary Function: Contouring Composites and IPR up to .30mm.
- Durable diamond abrasive on just one side to protect adjacent teeth
- The FitStrip™ serrated saw is the PERFECT instrument to separate accidentally bonded teeth and reduce over-tight contacts

FitStrip™ Starter Kit

FPSK01 contains: 2 handles, 2 serrated, 4 single sided (1 of each .08 mm, .10 mm, .13 mm, .18 mm) 4 double sided (1 of each .11 mm, .15 mm, .21 mm, .30 mm)

Most popular!

Your Complete Solution for Interproximal Reduction (IPR)!

- Primary Function: IPR when .40mm and .50mm are needed, yet can still be used to contour composites
- IPR gauges for exact reduction
- Attachable handle for greater ease of use and patient comfort

Universal Kit

FPSK04 contains: 2 handles, 1 IPR gauge, 4 single sided (1 of each .08 mm, .10 mm, .13 mm, .18 mm) 6 double sided (1 of each .11 mm, .15 mm, .21 mm, .30 mm, .40 mm, .50 mm)

Subgingival FitStrips are the ideal solution for the cervical area!

- Primary Function: Use with Composites, both for contouring and accessing cervical areas to remove overhangs or excess cements.
- Only 2.5mm height keeps abrasive below the contact point
- Safety zone protects contacts during insertion
- Extra thin at .05mm

FitStrip™ Subgingival Finishing and Single Sided Kit

FPSK08 contains: 2 handles, 10 Strips: 2 subgingival super fine, 2 subgingival fine, 1 subgingival medium, 1 serrated saw, 1 each single sided .08 mm, .10 mm, .13 mm, .18 mm

FitStrips – a complete line of interproximal trimmers and finishers from the company that invented tight interproximal contacts, **Garrison Dental Solutions.**

Kits All kits come in a package of 10 FitStrips with 2 handles.

Rally™

Mini Polishers for Composite

Rally gets you to the finish line faster!

The composite finish line that is. One lightning fast step will put a beautiful satin finish on posterior restorations or add the gray high shine polisher for a lustrous gloss on facials and anteriors. And if you want to be quick off the starting line, use the blue coarse grit for rapid reduction and shaping. Rally Mini Polishers get you across the finish line and on to your next patient in record time!

Get to the point - Every time!

Single patient Rally means that you get a clean, fresh, properly shaped polisher every time.

A clean get-a-way!

You don't want to leave a trail of crumbs or spattered polishing paste on the track. Rally's diamond impregnated high shine final polishers won't crumble during use and don't require paste to create a beautiful, durable shine.

Mini and mighty!

Rally's small size and tapered shaft create a truly agile polisher capable of reaching the smallest anatomical features without blocking your visibility.

Intra-oral Adjustment/Polishing
for Zirconia and Lithium Disilicate

Adjust and Polish Zirconia and
Lithium Disilicate the **eZr** Way!

eZr Intra-oral Adjustment:

- **No chatter, chipping or microfracture** - Unlike diamonds bonded directly to a hard metal shaft, eZr's rubber substrate cushions the diamonds to prevent damage to the restoration.
- **No heat build-up** - The carefully engineered substrate does not transfer heat during use.
- **FAST!** - eZr's coarse grit blue grinders make your adjustments fast and convenient.

eZr Intra-oral Polishing:

- **Unparalleled smooth polish** - Don't take our word for it! - "The eZr system is the only one I've tried that polishes zirconia to smooth!" Todd Brower, DDS, Holland, Michigan.
- **Increased physical stability** - Highly polished zirconia and lithium disilicate is stable and non-abrasive to opposing dentition.
- **No paste required** - Forget the mess and expense of polishing pastes. eZr™ is all you need.
- **No water required** - No need to use water when polishing. Water is only required for high speed.

1

Start by gross adjusting and contouring using the blue coarse grit grinders. Use the flat end taper for occlusal/labial/lingual/buccal surfaces and the disc for interproximal surfaces.

2

Use the green medium grit polishers for smoothing and pre-polishing. Use the point for the occlusal grooves, the cup for labial/lingual/buccal, and the disc for interproximal surfaces.

3

Use the orange fine grit polishers for high gloss polishing. Use the point for the occlusal grooves, the cup for labial/lingual/buccal, and the disc for interproximal surfaces.

Beautiful results!

Direct cusp covering of vital element with a very deep cervical margin

Dr. Daniele Gensini

The case presents the need to seal the cervical margin, which is in a very deep position even if it can be isolated with a dam, and to recreate an adequate emergence profile. Thanks to the particular design of the Slick Bands™ matrices, this step was easy and made it possible to bring the restorative margin into a favorable position. Subsequently, after having recreated the direct covering of the missing cusp thanks to a previously created silicone index, the missing proximal wall was reconstructed with the aid of a Composit-Tight® 3D Fusion™ anatomical matrix, which was very useful for obtaining a correct emergence profile and an appropriate proximal contact point. Finally, the modeling of the restoration was completed and the correct occlusal contacts were checked.

Figure 1. Occlusal view of prepared tooth with cervical margin.

Figure 2. Slick Bands™ matrix placement with correct emergence profile.

Figure 3. Highly filled flowable composite for reconstruction of the deep cervical margin.

Figure 4. Restorative margin in a favorable position and with correct profile.

Figure 5. Correct adaptation of Composit-Tight® 3D Fusion™ matrix to the new restorative margin.

Figure 6. Lateral view of the correct emergence profile recreated.

Figure 7. Occlusal check.

Predictably relocate deep margins for better final restorations.

The conservative deep margin elevation procedure allows for the maximum conservation of natural tooth structure while helping to avoid more invasive procedures such as crown lengthening. Relocated supragingival margins facilitate easier scanning/impressions and proper isolation for improved bonding of inlays, onlays and direct final restorations.

Clinical Case: The margin elevation technique allows proper isolation and elevation of deep margin areas prior to restoring with an indirect partial coverage restoration (inlay or onlay). The use of the Garrison® Reel Matrix™ margin elevation band allows proper adaptation and seal of these deep areas so that a composite margin elevation can be performed.

Pre-op X-ray shows the margin location for #17 subgingivally prior to elevation.

Seat the margin elevation band subgingivally. The narrowness of the matrix will allow it to slide subgingivally and seal the margin efficiently.

Seal the dentin and elevate the deep margin with restorative composite.

Remove the matrix and finish with a #12 blade to remove any flash. The deep margin has been relocated 1-2 mm supragingival for predictable isolation and delivery of an indirect bonded restoration.

Post-op X-ray shows the completed margin elevation prior to final restoration being completed.

ReelMatrix

Real Easy. Real Tight. Real Fast!

For all posterior restorations!

1 Real Easy:
The reels pop into the handle without any fuss! Press the reel into the handle and retract the grippers to lock the reel in place. Plus, if you use the regular matrices (yellow hubs) they can be easily pushed through contacts.

2 Real Tight:
Tight contacts and excellent contour are what Reel Matrix is all about. These thin matrices are pre-contoured in three dimensions and when combined with anatomical wedges and separator rings, the result is amazingly tight contacts at the natural height of contour.

3 Real Fast:
Pre-loaded reels mean you can just lock them in and go. The retainerless design greatly speeds up quadrant work while improving visibility and patient comfort. Add a SG500 separator ring and you virtually eliminate buccal and lingual flash.

IMPORTANT ACCESSORIES

PerForm™ Proximal Contact Instrument
(included in RMK05 kit)

Great for core build-ups

SlickBands™

Tofflemire-style

Non-stick technology developed by Garrison®: Modern bonding agents can adhere to uncoated matrix bands—Slick Bands™ slide right out.

Exclusive Garrison® shapes!

Proprietary Right Curve™ design.

The increased curvature of the **Right Curve™ matrix band** produces outstanding gingival seal and reaches over to adjacent teeth easier for broader, deeper contacts.

This creates a significantly increased funnel-shaped cone when wrapped around a tooth. It's the right choice for many restorations.

Margin Elevation Band

The deep margin elevation technique is a useful non-surgical approach to treating deep localized margins.

A margin elevation matrix will give you the best gingival adaptation and contour for the deep margin areas. It is trimmed in height to allow improved adaptation to deep margin areas.

Slick Bands™ Tofflemire-style Matrices

Clinical Tip: Use dead-soft green bands when contact is COMPLETELY broken with adjacent teeth for maximum burnishability. When contact is NOT broken with adjacent teeth, use regular gray bands.

IMPROVED Dead-soft Bands

with non-stick coating

Regular Bands

with non-stick coating

Right-Curve™ matrices provide a lower contact point and improved isolation. Excellent for all restorations.

Tofflemire-style matrices are .0014" thick
Margin elevation matrices are .002" thick

VariStrip™

How can you produce a natural curvature for anterior composites and eliminate black triangles? Check out Garrison's curved "Varistrips" to recreate the natural interproximal anatomy for anterior teeth.

- Helps avoid incorrect flat embrasures, black triangles and food traps that can be caused by old-fashioned straight mylars.
- No need for wedges on subgingival fillings, as the contours naturally close off the apical aspects for you.
- Excellent for class IVs, diastema closures, etc.
- Variable height allows you to slide each strip in until it precisely matches the tooth height before cutting off excess.
- The blue tint does not affect cure, but ends the annoyance of losing clear strips on patient bibs or bracket tables.

Blue View VariStrips—a must-have super-simple product for every dental office.

Dr. Michael Curtis, Bridgeport, CT, USA

Clinical Tip

After using your preferred bonding procedure, place the restorative material into the preparation in advance of using the cervical matrix.

Place the cervical edge of the matrix against the tooth (Fig. 1).

While pressing the gingival edge of the matrix firmly against the tooth, roll the matrix onto the tooth (Fig. 2). Excess material will be expressed from the occlusal edge of the matrix rather than subgingivally, greatly simplifying clean up.

Cure directly through the matrix.

For product information on the cervical kit, refer to page 34.

Our Most Popular Anterior Matrix

BlueViewTM VariStripTM

Contoured Anterior Matrices

The Blue ViewTM VariStripTM is a revolutionary contoured anterior matrix providing the optimum curvature and band height for virtually every anterior restoration. The 0.0020" thin plastic anatomical strip is tapered from one end to the other. You can place the strip interproximally and then slide it until the tooth height is perfectly matched. The pre-contouring easily recreates the occluso-gingival anatomy, avoiding flat embrasures.

Curved Form/tapered: Provides the optimum curvature and band height for virtually every anterior restoration.

Blue Tint: Provides contrast between matrix and tooth structure without compromising composite polymerization.

Case using the Fusion™ Anterior Matrix System

Dr. JD Corey, DDS, Muskegon, Michigan

Figure 1. Flexible matrix systems have a tendency to deform subgingivally. This can lead to non-hygienic restorations and decay on adjacent teeth (as demonstrated in this pre-operative radiograph).

Figure 2. Rubber dam is in place and teeth have been pumiced before removal of the decay.

Figure 3. Decay has been removed, the preparations have been refined, treated with gluma, etched, and bonded. These steps were completed before placing the matrix bands and wedge to ensure proper coverage of the restorative materials to the preparations.

Figure 4. Stacked matrix bands have been placed to provide facial access and are ready to be engaged by the wedge.

Figure 5. Completed restoration after removal of the rubber dam.

Figure 6. A post-operative radiograph showing a broadened interproximal contact, improved emergence profile, and appropriate marginal integrity of the restorations.

BlueView™

Cervical Matrices

"I love the Blue View Cervical Matrix! It works so well. My assistants love watching me use this system. The patients love the excitement in our faces. It makes the process easy and fast. Gotta love that! We are also hooked on using the ReelMatrix. Thanks so much for making great products."

Cynthia Brattesani, DDS,
San Francisco, CA, USA

Flexible

- adapts to individual anatomy for improved contours
- use it to directly compact the composite into the restoration
- thin edges allow excess composite to flow out for improved anatomy

Convenient!

- protects the restoration from contamination
- eliminates time spent hand sculpting
- eliminates air-inhibited layer
- reduces finishing time
- 6 sizes for a perfect fit

Blue Tint

- provides contrast between matrix and tooth structure
- does not compromise composite polymerization

KCMK2 INCLUDES

How PerForm™ works:

1A

STEP 1:
Place the first composite increment. Press PerForm™ into the uncured composite increment and either push (distal; fig. 1A) or pull (mesial; fig. 1B).

1B

2

STEP 2: Place the curing light directly on the Fresnel lens and cure.

PerForm

Proximal Contact Instruments

PerForm puts you in control.

- Improves contacts with any matrix system
- Control the height and breadth of contacts
- Increase the tightness of contacts
- Unique lens controls curing light diffusion
- Steam autoclave only

Composi-Tight® Matrix Forceps

Precise Placement, Unbeatable Grip.

Check out the GRIP! Effortlessly remove matrix bands that otherwise would be a struggle.

Precise Placement: The tips have a 75-degree angle with an occlusal-gingival orientation, providing a more appropriate placement angle than cotton forceps. The petite, carbide tips allow the matrix to be grasped at its upper edge to prevent distortion of the interproximal area of the band.

Unbeatable Grip: The tungsten carbide tips provide exceptional grip and tactile control for tough access cases.

Matrix Selection Guide

Being the Matrix Company, one of the most common questions we get is “which matrix do I use where?” While personal preference will drive much of the decision process, below is a chart that can provide a good starting point.

| Procedure | Recommended Materials | Page | Special Notes |
|--|--|-------|---|
| Distal of canine, short or malpositioned  | Strata-G™ Sectional Matrix Kit | 4–5 | MOST POPULAR! Separator rings designed to hold firmly on tough cases. |
| | Reel Matrix™—Metal or Blue View | 26–27 | Retainerless Tofflemire-style matrices, contoured and easy to apply. |
| | Slick Bands™ Tofflemire-Style Matrices | 28–29 | Traditional Tofflemire-style with non-stick coating. |
| Conservative Class II  | Strata-G™ Sectional Matrix Kit | 4–5 | MOST POPULAR! Superior contacts with minimal flash. |
| | Reel Matrix™—Metal or Blue View | 26–27 | Retainerless Tofflemire-style matrices, contoured and easy to apply. |
| | Slick Bands™ Tofflemire-Style Matrices | 28–29 | Traditional Tofflemire-style with non-stick coating. |
| Slightly wide and/or deep  | Strata-G™ Sectional Matrix Kit | 4–5 | MOST POPULAR! Superior contacts with minimal flash. |
| | Reel Matrix™—Metal or Blue View | 26–27 | Retainerless Tofflemire-style matrices, contoured and easy to apply. |
| | Slick Bands™ Tofflemire-Style Matrices | 28–29 | Traditional Tofflemire-style with non-stick coating. |

| Procedure | Recommended Materials | Page | Special Notes |
|--|---|-------|---|
| Large Class II with missing cusps  | Strata-G™ Sectional Matrix Kit—Green Wide Prep Ring | 4–5 | EXCLUSIVE! Dentistry's first Wide Prep ring greatly simplifies these more challenging restorations. |
| | Reel Matrix™—Metal or Blue View | 26–27 | Retainerless Tofflemire-style matrices, contoured and easy to apply. |
| | Slick Bands™ Tofflemire-Style Matrices | 28–29 | Traditional Tofflemire-style with non-stick coating. |
| Small to medium size Class III  | Fusion™ Anterior Matrix System | 32–33 | Bands and wedges with ideal gingival-incisal curvature for many types of anterior lesions. |
| | VariStrip™ Contoured Anterior Matrices | 31 | Pre-contoured in three dimensions AND tapered to provide the ideal band height and contour. |
| Large Class III or Class IV  | Fusion™ Anterior Matrix System | 32–33 | Bands and wedges with ideal gingival-incisal curvature for many types of anterior lesions. |
| | VariStrip™ Contoured Anterior Matrices | 31 | Pre-contoured in three dimensions AND tapered to provide the ideal band height and contour. |
| Class V  | Blue View™ Cervical Matrix | 34 | Contours and directly compresses resin while eliminating air-inhibited layer. |
| Crown build-ups, post and core  | Reel Matrix™ | 26–27 | Best choice. Margin Elevation band available for very deep buildups. Retainerless convenience. |
| | Slick Bands™ Tofflemire-Style Non-Stick Matrices | 28–29 | Margin Elevation band available for very deep buildups if you prefer a traditional matrix retainer. |
