

Renamel[®] BULKfill

Developed by Dentists for Dentists

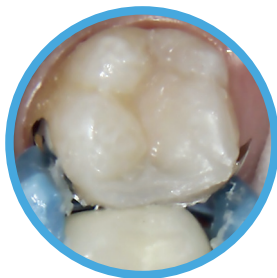

Renamel BULKfill has superior packability and excellent handling properties. It can be placed and pre-contoured in one layer with complete occlusal contour before polymerization. This makes polishing much easier and shortens the time needed to do your posterior restoration! The results are better esthetics, better margination, and the immediate ability to polish.

Renamel BULKfill is an advanced posterior composite that is packable, sculptable and polishable.

Advantages

- Rivals the speed of amalgam placement
- Cures to a depth of 4 mm
- Packable, sculptable, & polishable
- Designed for rapid one-step placement
- Increased opacity provides closer match to natural tooth structure
- Quickly polishes to a high shine
- Radiopaque for easy identification

Indications for Use

- Direct posterior restorations (including occlusal surfaces)
- Replacement of individual cusps
- Base-liner under direct restorations
- Restorations of deciduous teeth
- Class V restorations (cervical caries, root erosion, wedge-shaped defects)

Buddy Mopper,
DDS, MS, FAACD
Dental Educator and
Practitioner

“Renamel BULKfill addresses the shortcomings of previous bulkfilled materials. Ours is packable, not flowable. Our material stays in place, and you can sculpt any anatomy you desire prior to curing and it stays that way. The increase in opacity overcomes the mismatch of hyper-transparency. This material makes rapid polishing possible. Its overall physical properties are impressive!”

Elaine Bylis, DDS
Dental Educator and
Practitioner

“Cosmedent’s newest composite is sculptable, easy to manipulate, and produces a fantastic posterior filling. This material is great for routine fillings, and is especially great to get artistic with posterior composites!”

Dennis B. Hartlieb,
DDS, AAACD
Dental Educator and
Practitioner

“Cosmedent’s Renamel BULKfill is terrific for increasing my efficiency when doing large posterior composites. With the perfect blend of opacity and translucency, life-like restorations are achievable for even the most complex direct posterior composites.”

Bob Margeas,
DDS, FAGD, FASDA
Dental Educator and
Practitioner

“Cosmedent’s new Renamel BULKfill complements their great line of composites. It’s not sticky, blends into tooth structure, cures to a depth of 4 mm, and polishes well. The wide selection of VITA® shades makes it a wonderful material to make your restorations disappear!”
