

# Backwashing Is Easy

**1**

## Backwashing

is a simple procedure to wash away any loose sediment or debris in the filter and restore flow.

**2**

## Begin

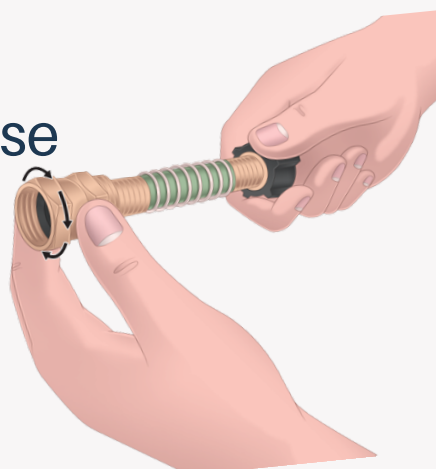

by detaching the DirtGUARD from the spigot and remove the Inline Filter. Open and remove lid.

**3**

## Attach

the Backwash Adapter to the hose end and tighten.

**4**

## Insert

Hose End (with adapter attached) into OUTLET side of the DirtGUARD. This will be in the same place where the inline filter was removed.

**5**

## Tighten

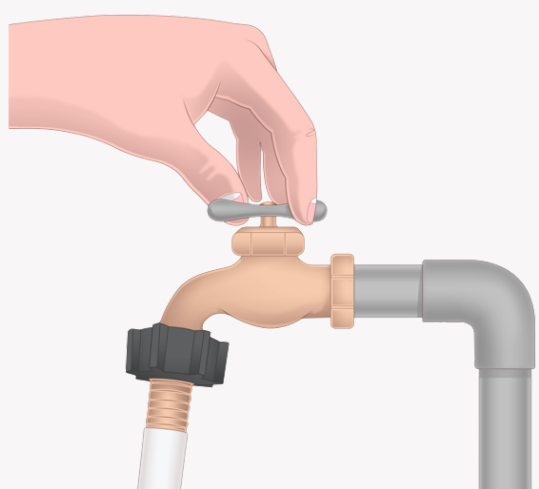

loosely....it is okay if it leaks a little. It will be easier to remove when finished.

**6**

## Turn

on water on full and flush the filter for a few minutes.

Note: Filter staining will not be removed.
