The Siyah Deep Grip Forceps are coated with Aluminium Titanium Nitride that is significantly harder, scratch-resistant and non-reflective for long lasting performance.

Increased hardness ensures long-term integrity of both the beak serrations and forceps overall.

- Extremely smooth surface seals the pores of the stainless steel, minimizing protein adhesion and reducing time to clean.
- Matte finish that reduces distracting glare and reflections mid-procedure.
- Machined beaks give you precision and control over your extractions.

**The Tear Drop**  
400-101 | \$149.99

An instrument created to add a notch at the gingival margin of clear aligners anywhere elastic hooks are required within the arch. The Tear Drop provides a reservoir to hold the elastics in place as the aligner is seated. This permits easier manipulation of elastics by the patient.

**The Horizontal**  
400-103 | \$149.99

The Horizontal instrument produces an indentation to accent individual root torque. It also serves a second purpose by enhancing retention of either clear aligners or retainers by placing an indent into a tooth's undercut or below a bonded attachment to enhance the contact of the aligner to that attachment.

**The Hole Punch**  
400-104 | \$149.99

The Hole Punch is used to create 6mm half-moon cutouts for relief of clear aligners around bonded buttons used for elastics. No need to attempt to attach buttons to plastic trays. In addition, the Hole Punch can nip away plastic to provide soft tissue clearance to prevent aligner impingement of tissue.

**The Spot**  
678-804 | \$149.99

The Spot creates a tiny, rounded dimple for spot contacts to accent small individual tooth movements or added aligner retention. It is typically used to accent movements on any tooth that just needs a slight "nudge". The Spot's small depression placed adjacent to the gingival embrasures can also enhance the retentiveness of an aligner or retainer.

**The Vertical**  
400-102 | \$149.99

Correcting rotations is often a challenge with aligners. The Vertical emphasizes over-correction of rotations by producing an indentation at the mesial or distal line angles on the facial and/or lingual of a specific tooth. As an option, a rotational couple can also be created using vertical indents on facial and lingual surfaces on opposing sides of a tooth. The Vertical can also be used to produce an indent to produce a mild "nudge" to enhance resolution of in-and-out discrepancies. It can also be used to apply an indent immediately next to an attachment to enhance the adaptation of the aligner to angle between that attachment and the aligner.

**The Counter Clockwise Wedge**  
678-807 | \$149.99

The Counter Clockwise Wedge is used to produce a wedge-shaped indent in an aligner at the facial and at the opposite line angle lingual for a specific tooth to create a rotational couple. Used to create a counter clockwise rotation.

**The Eraser**  
678-811 | \$149.99

The Eraser is designed to reverse or remove unwanted indents placed by other instruments in the Clear Aligner Series. The Eraser is designed to flatten the plastic where a depression was inadvertently positioned, or the accent is no longer required.

**The Petite Punch**  
678-805 | \$149.99

The Petite Punch cuts a 4.5mm half-moon cutout in an aligner for relief of the plastic around bonded buttons used for elastics. When only a small cut-out is required to provide clearance for buttons or hooks on the buccal but also on the lingual of any tooth in the aligner, especially for smaller teeth. The Petite Punch can also nip away plastic to provide soft tissue clearance to prevent aligner impingement of tissue.

**The Clockwise Wedge**  
678-808 | \$149.99

The Clockwise Wedge is used to produce a wedge-shaped indent in an aligner at the facial and at the opposite line angle lingual for a specific tooth to create a rotational couple. Used to create a clockwise rotation.
