

SOS DIAGRAM

2022 BETA Xtrainer

Two Stroke

On the 2022 Beta Xtrainer, you will connect the loop end of the wire to the ground side of the battery. For the trigger side, you will follow the wires down from the start button. The trigger wire will be an orange with a white stripe. Attach the EZ connector to that wire under the tank or where ever is a safe spot. You can also trace the Orange with a white stripe through the connector and connect downstream of the connector closer to the battery. If you want, make sure to trace through the connector matching up the pin with the wire on the other side. It may be a different color, but as long as it matches up with the Orange with a white stripe that came down from the start button, you will be fine.
