## **ADD BACK STATEMENT**

The following is guidance on our Add Back rates. These instructions can also be found in various forms on our website at [www.extractconsultants.com](http://www.extractconsultants.com) and on labels.

All of our terpenes, terpene blends and flavors (including the Remedies line of products) are potent and highly concentrated materials. Do not directly ingest, inhale or touch with bare skin prior to dilution. These materials should be kept out of the reach of children. **Special care should be taken to ensure safety at all times. Please wear gloves and eye protection and have proper ventilation.**

**For more safety Information, please review each material's SDS (safety data sheet).**

### **Terpene Blends**

Extract Consultant's line of terpene blends are specifically designed to work directly with oil based products. Each terpene blend has an average add back range of .5%-3%. This can vary quite a bit based on preference, so our general rule of thumb is always start low and work your way up. You can always add more!

Note\* Always store your finished product between 60° and 75°. This will help prevent separation, crystallization, and oxidation.

### **TasteBudds Flavors**

Our line of TasteBudds flavors are specifically designed to work directly with oil based products. Each flavor has an average add back range of .5%-3%. This can vary quite a bit based on preference, and the final product that it is going into, so our general rule of thumb is always start low and work your way up. You can always add more!

Note\* Always store your finished product between 60° and 75°. This will help prevent separation, crystallization, and oxidation.

### **Remedies Effect Blends**

Our Remedies line of Effect Blends are specifically designed to work directly with oil based products. Each blend has an average add back range of .5%-3%. This can vary quite a bit based on preference, and the final product that it is going into, so our general rule of thumb is always start low and work your way up. You can always add more!

Note\* Always store your finished product between 60° and 75°. This will help prevent separation, crystallization, and oxidation.
