different kinds of
walls require different
rawlplugs/screws.

Power drill
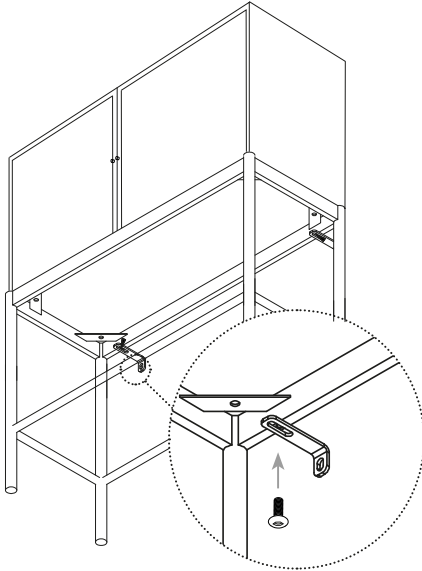

Screwdriver

Pencil

**Warning**

# ASSEMBLY PROCESS

*M8 16mm screws*
*for all 4 corners*

*Use 5 mm hex key*
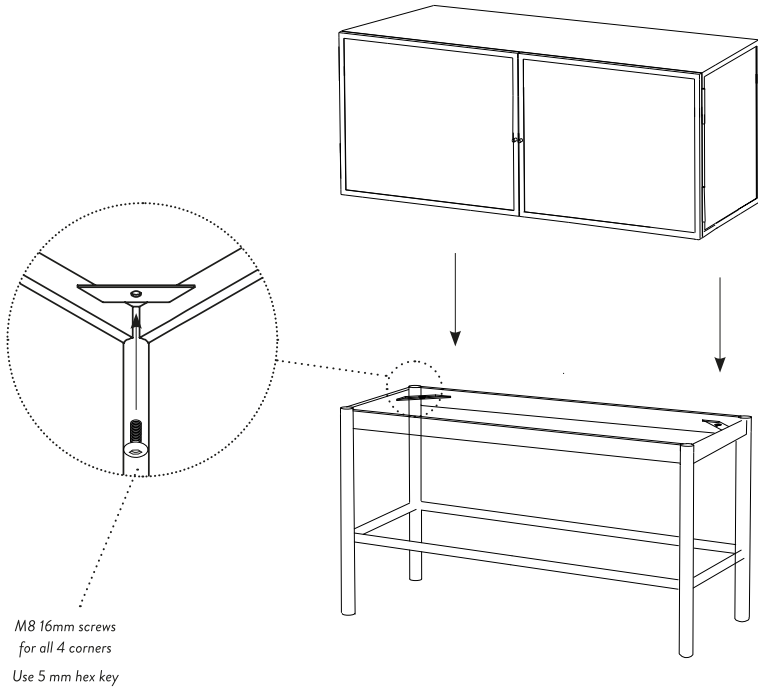

**1**

Please mount the cabinet to the legs
using the screws indicated above.

# ASSEMBLY PROCESS

**2**

We recommend mounting the sideboard against a wall with the incuded wall safety set.

Mount the wall safety set onto the sideboard and place it against the wall. Screw the wall safety onto the cabinet. Do not tighten screws yet.

*M6 16 mm screws x 2*
*Use 4 mm hex key*

**3**

Remember to level the sideboard with the adjustable feet to avoid the sideboard becoming crooked.
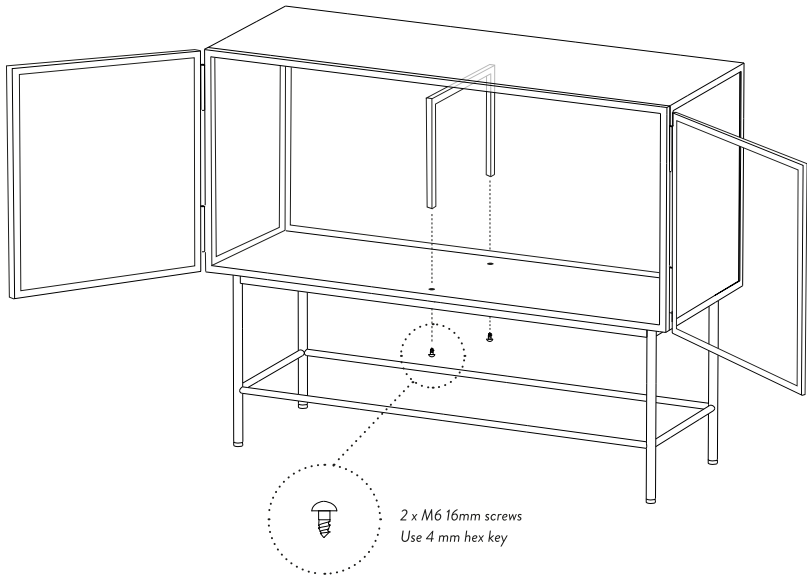

If needed, pre-drill holes and insert rawlplugs.

Screw the wall safety into the wall. Finally, tighten the screws into the cabinet.
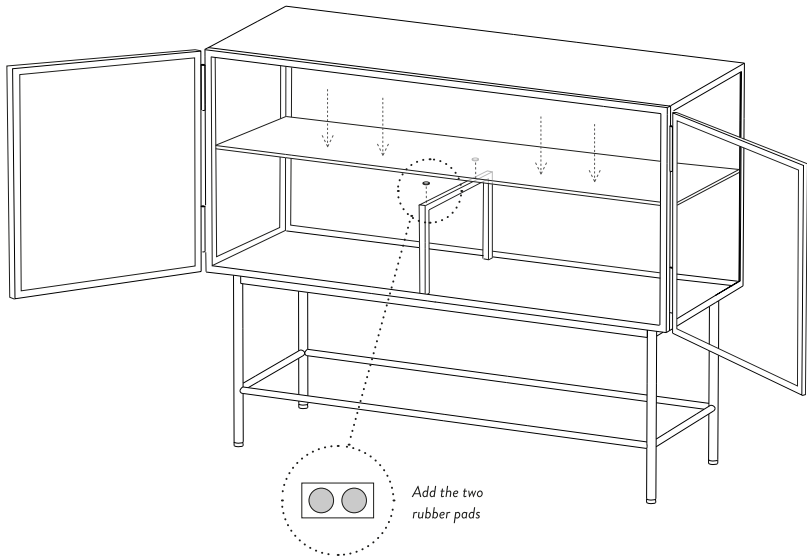

*2 x M6 16mm screws*
*Use 4 mm hex key*
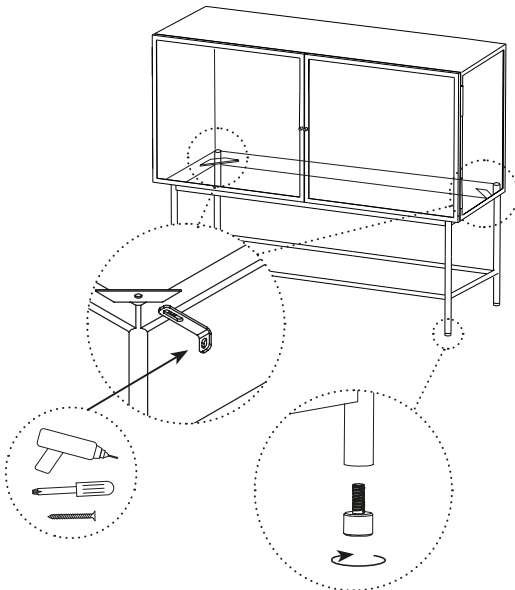

**4**

Insert the u-formed stabiliser inside the
cabinet so that it faces downwards. Place it
upon the pre-drilled holes at the bottom of
the cabinet, then use the hex key to fasten
the two screws from underneath.

*Add the two
rubber pads*

**5**

Add the two rubber pads on top of the
u-form to prevent friction between the parts.
Then place the metal shelf inside the cabinet
and lower it down, so that it ends up
resting upon the u-form as well as the
support in the four corners.
