

Arber Bio Protectant

Boosts plants' defenses, strengthens plants' immunity, and improves plant health. Use on outdoor vegetables, roses, fruits, berries, nuts, flowers, foliage, ornamental trees, and shrubs.

How To Use

For optimal results use in your regular watering cycle. Also ideal for transplants, potting mixes, as a rooting compound, and in hydroponics.

Mix

→ Shake bottle and mix .25oz of concentrate with 32oz of water, or 1oz of concentrate for every 1 gallon of water

Apply

→ Apply directly to soil or apply to leaves for plant foliar diseases

→ Apply every 10-14 days for wellness and every 7-10 days for disease control

→ Do not allow mixture to sit for prolonged periods of time, instead mix a new batch for every use

Active Ingredients

Arber's Bio Protectant is formulated from a species of weed called knotweed. Knotweed is a powerful little plant and considered one of the most invasive species in the world. Lucky for Arber, they were able to pull out some of its redeeming qualities. Through a complex fermentation and extraction process Arber grabs key compounds to create their formulation. Harvesting an invasive species to create one of the most powerful plant protectants on the market is a formulation we dig.

Extract of Reynoutria

Sachalinensis: 5%

Other Ingredients: 95%
