Safety instructions

1.0

- 1.1 Introduction
- 1.2 Protection against liquids & heat
- 1.3 Dismantling & Radio Frequency interference
- 1.4 Connecting your equipment

1.0 *Safety instructions*

Introduction

1.1

The DAVE is an incredibly powerful and versatile digital-to-analogue convert preamplifier and headphone amplifier.

Before operation, we strongly advise you read this User Manual thoroughly.

We also recommend that you store this User Manual, along with your original receipt of purchase, in a safe place should you require assistance in the future.

 *Made in* **BRITAIN**

Protection against liquids & heat

1.2

The DAVE is not protected against liquids of any kind. Never place containers of liquid on DAVE. Never allow DAVE to come into contact with moisture or liquids; doing so could result in electrocution or damage to the DAVE's internal circuitry.

Be aware that liquids, including water that has dried, can leave minerals that can affect the PCB and other components, which could eventually lead to oxidisation and short-circuiting.

If the DAVE comes into contact with moisture or liquids, immediately disconnect from the mains power supply, and connected equipment, and contact Chord Electronics for further advice.

The DAVE has internal thermal protection which will shut down the unit in the event of excessive temperatures being reached. Never operate the DAVE near sources of heat or naked flames as this will decrease the lifespan of the internal components.

It is advised that you do not operate the DAVE in an area of direct sunlight or on top of significant heat-producing devices.

Please be aware that it is entirely normal for the DAVE to become warm during use, particularly within a stacked configuration.

If you are concerned about the temperatures, please switch the device off using the front panel or consider a different placement.

Dismantling & radio frequency interference

1.3

There are no user-serviceable components within the **DAVE** or its power supply. Dangerous voltages/currents exist within the **DAVE** and its power supply, posing a severe risk of electrocution and/or fire.

Never attempt to open, dismantle or apply internal third-party devices to it or insert anything other than the listed interconnects or headphone adapters within this user manual.

If the **DAVE** develops a fault or the casework becomes damaged, immediately disconnect from the mains power supply and connected equipment, and contact **Chord Electronics** for further advice.

With a thick, solid aluminium chassis, the **DAVE**'s casework largely protects the sensitive internal circuitry from radio frequency interference. However, for optimal performance, it is recommended that the following points are observed:

Although the **DAVE** is largely shielded, it can generate radio frequency interference that may have an effect on radio and television reception. If this occurs, please reconsider your placement.

1. Consider placing the DAVE away from wireless routers.

2. Separate the DAVE from amplifiers using toroidal transformers.

3. Operate mobile phones at a distance to avoid interference.

Connecting your equipment 1.4

Before connecting the DAVE to any equipment, consult the manufacturer's user guide to confirm compatibility.

When connecting the DAVE to any equipment, make sure that all devices are off, including the DAVE.

Once connected, switch all equipment on starting with the source and ending with the amplification.

Initially, operate the DAVE on its lowest volume setting, gently increasing to a comfortable listening level.

Never operate the DAVE at excessive sound levels; permanent hearing damage and loss can occur.

The DAVE does not have internal batteries and, therefore, must be permanently connected to a source of power.

The 10A IEC mains lead simply plugs into the DAVE.

If the power supply is prematurely disconnected DAVE may still remain active for up to 15 seconds, however, this may cause damage to connected equipment.

 Never disconnect the power cable during operation. Only disconnect when DAVE is off. If the power cable is disconnected during operation there is a risk of damage to connected equipment.

Warranty

2.0

- 2.1 Warranty period & registering your purchase
- 2.2 Making a claim & warranty exclusions

2.0 *Warranty*

Warranty period & registering your purchase

2.1

At the point of sale, Chord Electronics Ltd. provides the DAVE with a comprehensive three-year warranty*, which covers defects in materials and workmanship through fair wear and tear.

*The warranty is transferable with proof of purchase, however is not available on ex-demonstration products.

Please use the form below to record the details of your purchase

in the event that these are required at a later date, we further advise that all purchases are registered with Chord Electronics at: **chordelectronics.co.uk/register-product/**

RETAILER:

DATE OF PURCHASE:	
TRANSACTION ID:	

Making a claim & warranty exclusions

2.2

In the unlikely event of a claim, you must provide Chord Electronics with the details of the claim, including your original proof of purchase and serial number in order to validate the nature of the repair.

Upon receipt, Chord Electronics will make an assessment within 30 days and provide a reasonable solution.

All warranty repairs must be carried out by Chord Electronics or an approved service centre to guarantee the quality and safety of the repair.

WARRANTY EXCLUSIONS: The warranty does not cover connected equipment, personal injury or development of a natural patina of the metalwork and will be null and void if the following is applied: wilful neglect; modification or tampering of the product; improper use of the product; acts of God; damage caused by a connected device; mechanical shock; fire or application of excessive heat or repair/modification by a non-authorised third-party vendor.

**Getting to know
DAVE**

3.0

- 3.1 Getting to know DAVE
- 3.2 The front panel
- 3.3 The top panel
- 3.4 The rear panel
- 3.5 The remote control

3.0 *Getting to know DAVE*

Getting to know DAVE

3.1

The DAVE is an extraordinarily powerful leading-edge DAC/preamplifier/headphone amplifier featuring multi-award-winning FPGA technology.

To get the very most out of the device for many years ahead, we recommend familiarising yourself with this user manual.

The front panel

3.2

Whilst an IR remote control is supplied, the front panel of the DAVE is the main user interface and can entirely control all user-configurable options, inputs and volume.

Dave features a single headphone output available on the front of the device. This can accommodate headphones up to 800 Ω without the need for any additional headphone amplifier.

The rear panel

3.4

The rear panel offers comprehensive connectivity suite, featuring both standard connections and those which are used with other Chord Electronics' devices.

When installing any cable, you must make sure that they securely click into place, especially the optical input.

 **WARNING:** Do not use any other power supply other than that supplied. Doing so will invalidate your warranty.

The remote control

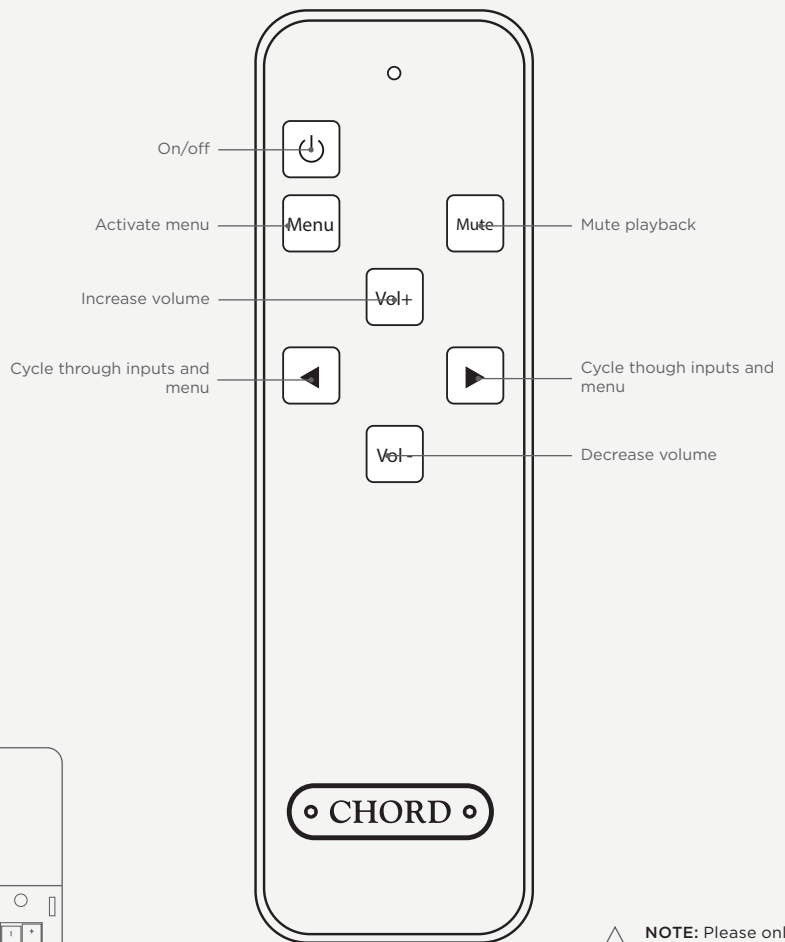

3.5

For convenience, a branded infra-red remote control is included with DAVE.

The remote will operate up to a distance of 10 metres with clear line-of-sight to the infra-red receiver within DAVE, which is located below the ILCD screen.

For best operation, do not operate the DAVE within a cabinet or place other materials/ devices on top of the device.

Selecting optical input via remote: A single press of the OPT button will select the previously selected optical input. A longer press of 3-seconds will switch to the next optical input.

NOTE: Please only insert AAA batteries into the IR remote control and observe the correct orientation as indicated within the remote control. Failure to do so could result in non-operation or battery leakage.

Setting up DAVE

4.0

- 4.1 Placement
- 4.2 Connecting DAVE to equipment
& DAVE power-on sequence
- 4.3 Powering on DAVE

4.0 *Setting up DAVE*

Placement

4.1

Whilst the DAVE will operate normally on top of a rack or side table. It is recommended that the device is allowed to 'breathe'.

Allocating 10cm of space around it to convection-cool during operation is advised.

As the infra-red remote control requires a direct line of sight to the viewing portal, avoid placing objects on top of the DAVE or placing it within enclosures.

Connecting an input to DAVE & input selection 4.2

When connecting the DAVE to equipment please ensure all devices are switched off.

It is recommended that once all equipment is properly connected, that the volume setting is operated to its lowest setting.

Then slowly begin raising to a comfortable listening level, always observing partnering manufacturers' guidelines.

Powering on DAVE

4.3

POWER ON SEQUENCE:

To turn on DAVE,
localise the large power
button on the back of the device.

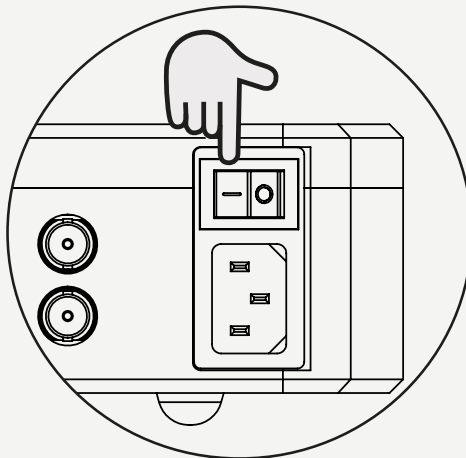

During this period,
do not initiate music
playback.

NOTE:DAVE does
not have a standby
function.

It may take 15 seconds for DAVE
to complete a safety check.
During this stage music playback
will not be possible.

How to navigate the menus 5.0

5.1 The screen & navigating the menu

5.2 Sample rate

5.0 *How to navigate the menus*

The screen & navigating the menu

5.1

CHARGING SETTING AND THE SCREEN

GOING BLACK: When you make a new selection via the menu, DAVE needs to write this to its internal memory. This will cause the display to temporarily display a black screen.

For darker environments, bright LEDs may present a challenge, therefore, DAVE offers 4 different menu display settings. Find this listed under Display in the menu.

THE MENU: To advance your way through the menu of DAVE you may press 4 buttons surrounding the Volume control dial.

Use the up and down buttons to cycle through menu options on the screen. Using the left and right buttons you are able to change the options in the sub menus.

Use the Volume control knob to lock in your preferred option by pressing the button down. This button can also be used as a volume dial, you are able to turn the dial to increase or lower the volume.

** Hold down these buttons to change between modes*

Sample rate

5.2

SAMPLE RATE INDICATOR:

During playback, the sample rate will be indicated on the screen

DAVE is capable of playing files up to 768kHz, 32-bit and DSD 512. See the table below for full details:

USB*	44.1kHz to 768kHz 16bit to 32bit – DSD 64 to DSD 256 (DoP interface), 16bit to 32bit - DSD 64 to DSD 512 (native USB interface)
BNC Input	44.1kHz to 384kHz 16bit to 24bit
Optical Input	44.1kHz to 96kHz 16bit to 24bit
AES Input	44.1kHz to 96kHz 16bit to 24bit
Coax Input	44.1kHz to 384kHz 16bit to 24bit – DSD 256
Dual BNC**	Special operation – DBNC: 88.2kHz to 768kHz 24bit

*USB is natively compatible with all Mac OS X and Linux machines without the use of drivers. Windows machines may require a driver, available on the Chord Electronics website.

**Dual BNC is reserved for special operation with Chord Electronics partnering products. Dual BNC does not appear within the menu by default, it will only appear when successfully connected to a partnering product.

NOT SEEING THE CORRECT SAMPLE RATE

If you are unable to see the associated change during playback, this is due to your music playback application, or audio sample rate settings, or not sending the appropriate sample rate through to DAVE.

Please consult your music playback application user manual for more information.

Playback modes

6.0

- 6.1 Playback modes
- 6.2 Headphone mode
- 6.3 Pre-amplification mode
- 6.4 DAC mode

6.0 *Playback modes*

Playback modes

6.1

DAVE has three user-selectable modes tailored to the intended operation for the device: Headphone mode, Pre-amplification mode and DAC mode. Each mode will be displayed at the bottom of the screen on the right hand side.

When headphones are connected to DAVE, for protection, the device will enter Headphone Mode where only the headphone outputs are enabled. It will not be possible to manually deselect this; only removing

the headphones will disengage this mode. When headphones are disconnected, it is possible to navigate between Pre-amplification Mode or DAC Mode by holding down the right and left menu buttons and allowing DAVE 3 seconds to change between modes.

Headphone mode

DAC mode

Pre-amplification mode

WARNING: For the protection of your hearing and equipment, please do not navigate between the Pre-amp and DAC without disconnecting DAVE from any other device or a source of music.

Headphone mode

6.2

When the DAVE detects that headphones have been inserted into the 1/4" front-panel connector, the device will enter Headphone Mode, which is for headphone listening only. DAVE will identify the headphones and display Headphone in the bottom right hand side of the screen.

When this mode is entered, the DAVE will remember the last-used settings (including volume) and will effortlessly drive any impedance headphones including but not limited to 16Ω to 800Ωs, without the need for an external headphone amplifier.

WARNING For your protection, when headphones are connected to the DAVE you will be unable to manually exit Headphone mode until they are disconnected.

Pre-amplification mode

6.3

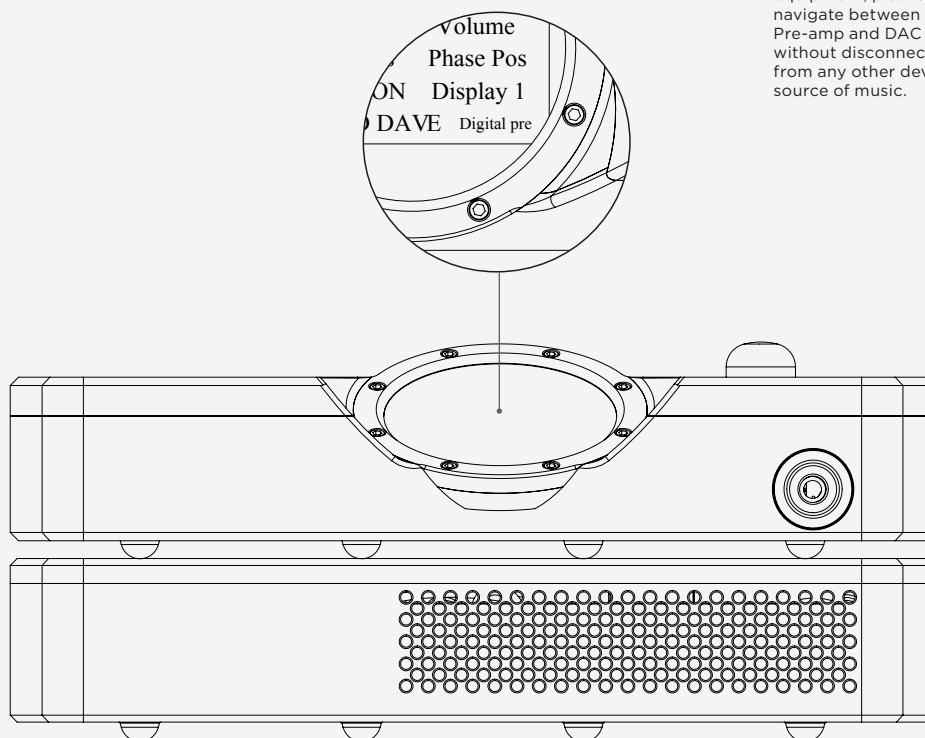

Providing headphones are not connected to the DAVE, Pre-amplification Mode can be manually engaged.

Pre-amplification Mode deploys the DAVE's digital preamplifier capabilities enabling the volume to be attenuated to prevent clipping or to feed directly into a powered amplifier or speaker.

Please note that once the DAVE enters Pre-amplification Mode, 8W on RCA and 20W on XLR, the rated spec is 7W/8 RCA and 18/8 (XLR balanced).

In most circumstances, where a simple attenuation of the 3V line-level signal is required to match a preamplifier, or power amplifier, you must significantly reduce the volume before

 **WARNING:** For the protection of your hearing and equipment, please do not navigate between the Pre-amp and DAC modes without disconnecting DAVE from any other device or a source of music.

DAC mode

6.4

With headphones disconnected, DAC Mode is selectable. DAC Mode can be employed when used within a conventional audio system, where an external amplifier is present. When this mode is selected, a 2.5V RMS line-level signal will be present on all outputs.

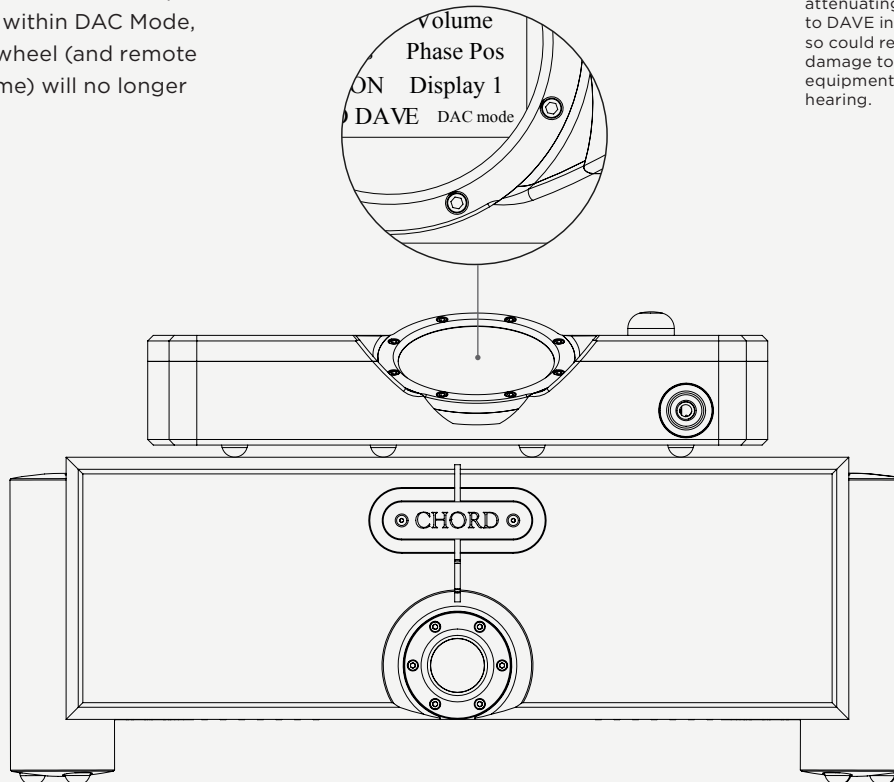

Select DAC mode by holding down the right and left buttons and allowing DAVE 3 seconds to switch modes. As the output level is fixed within DAC Mode, the Volume wheel (and remote control volume) will no longer respond.

Before connecting the DAVE to other components, for example a preamplifier or amplifier, please consult the respective user manuals, as they may require a signal less than 2.5V RMS to provide optimum performance. If you require a line-level signal, less than 2.5V, please use Pre-amplification Mode to attenuate the signal as appropriate.

When changing from DAC/Pre-amp mode please give DAVE time to switch between modes. Stop all playback at this time.

 **NOTE:** As the output level is fixed on this mode, the volume wheel will become unresponsive.

 **WARNING:** Never connect any device incapable of attenuating a line level signal to DAVE in DAC Mode. Doing so could result in permanent damage to any connected equipment, along with your hearing.

Special features

7.0

- 7.1 Crossfeed
- 7.2 Settings memory & galvanic isolation
- 7.3 Display messages

7.0 *Special features*

Crossfeed

7.1

CROSSFEED: Crossfeed is a form of digital processing that blends the left and right channels of a stereo recording to achieve a speaker-like presentation during headphone-listening. It is also a separately configured option when not in Headphone Mode.

The DAVE has four available modes of Crossfeed, shown as Crossfeed on the display:

Crossfeed 0: No crossfeed.

Crossfeed 1: Minimal crossfeed.

Crossfeed 2: Moderate crossfeed.

Crossfeed 3: Broad crossfeed.

Settings memory & galvanic isolation

7.2

SETTINGS MEMORY:

The DAVE remembers previous settings, including volume and filters, even when powered down (or with the power supply removed). You do not have to perform any special actions.

GALVANIC ISOLATION:

Galvanic isolation involves isolating the power rails of the data USB input, allowing for greater sonic performance. The DAVE features a Class 2 Type-B USB input with this protection. No special attention or cables are required to allow it to however, the USB +5V VBUS must be connected and powered, as the USB decoder device is powered from this line.

Display messages

7.3

During use of DAVE you may encounter a number of on-screen display messages. Please use the graph to discover their meanings.

PCM	Set to PCM mode
DSD	Set to DSD mode
Phase Neg	Negative output phase
Phase Pos	Positive output phase
HF Fil ON	High frequency on
HF Fil OFF	High frequency off
Display 1-3	3 menu viewing options
Display 4	Message mode - will turn off DAVE Screen after 30 seconds
