

# CITY LIFE

INSTALLATION INSTRUCTION  
ACCESSORIES

**IMPORTANT!**

Please read this instruction **Prior** to installation

## Recommended Tools

Tape Measure

Level

Electric Drill

Flat Head Screwdriver

Phillips Screwdriver

4mm Hex wrench

## INSTALLATION

Select position for your accessory . Trace around the base flange and position the Fixing kit in the centre location.

Measure the distance between the fixing points ensuring they are level and transfer these onto the wall . Put some tape over the position of the hole markings and mark them again . This will help prevent tiles from cracking when pre drilled.

Drill through the markings using suitable drill bit for your application

Remove the tape and insert the wall plugs into the holes. If needed use a rubber mallet and to gently position the wall plug in place. Align the fixing kit in position and evenly tighten into position .

Push accessory onto the fixing kit supplied ensuring it is level and tighten the grub screw into the notch provided on the fixing kit
