# Ring Sizing Guide

---

We have created this guide to help you, but ring sizing is hard to determine accurately from a paper printout. To be absolutely sure of your size you should be measured by your local jeweler or at one of our NYC stores.

Keep in mind that many of our rings (including those from our 1909 collection, engraved wedding bands, and re-sized antique rings) are **final sale**, so purchase carefully! We cannot be responsible for conversion errors, paper sizer malfunctions, typos, or any other ring sizing mistakes made on your end.

---

## HOW TO USE THIS GUIDE

Before you print this page, make sure to un-check all “scale to print” check boxes, and ensure that “page scaling” is set to “none” on your print dialog box.

Use a ring that fits you just the way you like on the finger you intend to wear the ring. Place it over the circles below to find your size. Match the **inside** diameter of the ring to the circle’s outline.

In the United States, engagement and wedding rings are traditionally worn on the “ring finger” (the finger between your pinky and middle finger) on the left hand.

---

## TIPS FOR MEASURING YOUR RING SIZE

For best results, use a plain, thin band. Never use a string to measure your ring size - they stretch, which may give you an erroneous reading.

Remember, each one of your fingers is a different size, so a ring you wear on your right hand will not fit your matching finger on the left.

If you’re buying a wide band, they tend to feel tighter than thin bands, so err on the large size when ordering.

If your knuckles are extra-big, order the size between the measurement of your knuckle and the measurement of the base of your finger.
