

Surface Choice

Find a flat spot on the headphones for the 0.5" circle of adhesive. The adhesive will stick to smooth and mesh surfaces but does not stick well to rubberized surfaces.

1. Put the headphones on to ensure the ModMic will reach the corner of your mouth from the desired mounting point.
2. Thoroughly clean and dry the surface with the included alcohol pad.

Attaching & Orientation

1. Attach a base clasp to the top clasp that holds the ModMic's boom.
2. Remove the protective backing from the adhesive.
3. While holding the top clasp, orient the mic boom angle down so it points towards where your mouth will be when using your headphones. (This will reduce the need for additional bends in the boom after installation (see figure A).
4. Press the whole mic/clasp down onto the cleaned spot and hold firmly for 30 seconds. (For best results on irregular surfaces, allow the adhesive to cure for 1 hour)
5. **To reverse the orientation of the boom** from right to left, do not remove the boom from the clasp but simply re-bend the cable end of the boom downward in the opposite shape (see figure B).

Getting the most from your ModMic

1. The mic is sensitive to plosive blast/wind from your mouth, especially P's (see figure C).
2. To lessen unwanted cable torque on the clasp, fold the cable end of the boom so that it is close to the clasp (see Figure D).
3. Ensure the mic icon on the boom is pointed towards your mouth (see Figure E for detail).

Do you need a little more help?

Here are some common troubleshooting steps that may help you out.

1. Ensure the mute switch is in the unmuted position. (The switch should be switched up towards your mouth)
2. Make sure you have the ModMic selected as your default recording device in your recording devices options.
3. If you're having audio quality issues, try multiple ports on your computer/device or use a USB soundcard.
4. Check to make sure all of your audio drivers are up-to-date. Check online for any known issues with your motherboard's onboard sound and microphones.
