# ILV-20 Infant Life Vest

The ILV-20 is a dual chamber, 23-pound buoyancy Infant Life Vest that is FAA TSO C13d and UK CAA/ARP 1093 approved. SWITLIK supplies more infant life preservers to more air carriers worldwide than anyone else.

- The upright flotation provided by the underarm buoyancy design allows for greater comfort, an important factor during the stress of an emergency.

Oral tubes for inflation

- 4 way reversible design ensures simple, intuitive and secure donning every time.

- Due to the broad size range of the ILV-20, flight attendants can be liberal in their size and age estimation when distributing the ILV-20 infant life vest during an emergency.

- Compared to the traditional infant cot, the ILV-20 is more compact, lighter weight and fits a larger size range of children AND is less expensive.

- Available in a variety of different pack sizes with 2 year, 5 year, and 10 year recommended TBOs.
