Dear Mr. Sciortino,

The life preserver drawing S-61800/61850-() has had a minor change to it. Revision P and this letter are being submitted to bring our records up to date.

Revision P dated 5/16, allows for the use of an alternate cylinder cover (item 44) for all life preserver assemblies. This cover was already in use on two variations of the S-61800/61850-() life preserver. Sheet 1 shows a new illustration of the alternate cover. Sheet 2 adds an item callout for the cover next to the item callout for the original cover, Section N-N. Sheet 3 adds Note 21 which states that the cover may be used in lieu of the original cover. The word "DRAWING" was corrected to "DONNING" in Note 7. In Note 9, two items of thread (item 28) had their Factory Codes changed to Part Numbers. The part numbers for a 1 inch webbing (item 17) and a 3/4" webbing (item 18) were changed due to a different supplier. The material characteristics of the new webbing, however, are unchanged. The material specification of a thread, Item 28, was corrected from Type 1 Class 1, to Type 2 Class a, to reflect the latest revision of the thread specification (V-T-295E). The drawing tolerance was changed from S-1346 to S-1448. The new tolerance drawing is more appropriate for textiles.

Switlik has reviewed the design change, and all applicable data, and consider this a minor change per 14 CFR Part 21, Subpart O, §21.619 and as defined in our quality control manual. As no change was actually made to the FAA-approved life preserver, it does not require a substantially complete investigation to determine compliance with TSO-C13f, nor are the minimum performance standards of Appendix 1 affected.

We hereby certify that this life preserver meets or exceeds all the requirements of TSO C13f, complies with 14 CFR Part 21, Subpart O, and will be manufactured under the strict quality control procedures on file with your Saddle Brook, New Jersey office.

Should you have any questions regarding this application, please don't hesitate to contact us.
