

## Wood Mastic E800 Aqua+

### Water repellent Paste Filler

### Perfect for outdoor use.

The E800 paste filler is a popular product of very high quality. It is a traditional fine-grained paste filler which is very suitable for wood repairs. It stands out thanks to the exceptional water repellency that is created when the paste filler hardens. Even without finishing surface treatment the filler will repel water and moisture in general.

This specific quality makes the filler especially suitable for wood that is used outdoors such as windows and doors. Stain, lacquer, paint oil etc. can be applied when the filler has hardened. E800 Aqua+ is water based and safe to use. Made from non-toxic mineral components.
