

OS GIKEN

Pinion Gear Modification Reference for OS Giken [R160] Datsun 510 Rear LSD Installation

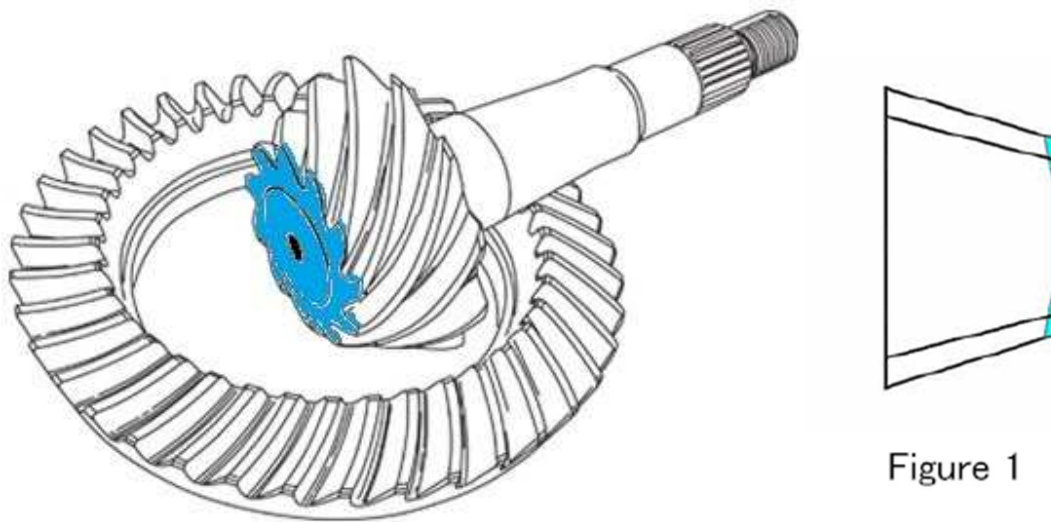

Figure 1

Modification

1. Some Datsun R160 differentials may require shaving the nose of the pinion gear for proper clearance to the LSD case. The LSD has very tight clearances to that area and requires close attention to detail during installation. Clearances can vary from carrier to carrier and may require this modification. Please contact your local gear shop professional for installation.

General Warning

Please be aware of the potential risks and hazards when installing aftermarket products. We do not take any responsibility for any loss and/or injury that may occur when our products are modified, re-used, or installed incorrectly. Please seek a trained professional for installation of our products.
