If the motorcycle is fitted with genuine Kawasaki engine protector bars, the mounting of the cruise control CIU is slightly different.

Refer to the cruise control installation manual for cruise control installation.

The engine protector bars mount in the same location as the cruise control CIU.

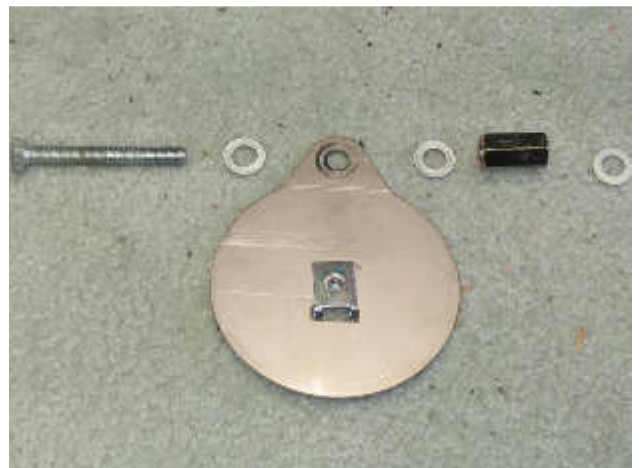

Remove the upper mounting bolt on the engine bar, as you would normally if the bar was not fitted.

Use the new bolt, washers and spacer provided to mount the CIU mounting bracket. Fit them to the bike in the order shown in the photo.

Apply thread locking compound to the threads of the bolt before fitting it.

Fit the CIU bracket to the bike with the new longer bolt, washers and spacer.

The CIU bracket fitted.

The CIU fitted to the bike.

Note: - The routing of the cables around the clutch fluid line is slightly different compared to the standard routing.

The bike's original throttle cable will now be routed ABOVE the clutch fluid line instead of below.
