

DAILY CARE

The wood surface can be cleaned with a mild solution of water and soap (avoid aggressive soaps) or with a special soap for wood surfaces (e.g. natural soap). Any food or liquid should be removed immediately from the surface. The oiled treatment protects the wood from most common fluids, but is no guarantee against stains.

PREVENTATIVE TREATMENT

When the piece is new, apply Osmo Hardwax oil once or twice a month for the first three months. Afterwards, apply the treatment twice a year to maintain the soft oiled finish.

If you wish, stains and small scratches can be removed with very fine sandpaper. Then retreat the surface with the Hardwax oil to restore and protect the surface. Some rubber products, such as computer feet or electrical cords, may discolour the finish. Marks may be avoided by placing a strip of felt or leather under accessories.

Avoid exposure to direct sunlight, extreme temperatures and humidity. Avoid placing furniture near a heat source such as a radiator or fireplace.
