

SMALL BLOCK CORVETTE

32-1139070 PRODUCT NOTICE

The factory copper brass radiator used on all 1969-72 small block Corvettes featured a special formed tube for suspension clearance.

This looks like a “dent” and some mistake this for damage. The DeWitts “Direct Fit” model 32-1139070, includes this formation and it is not to be considered shipping damage. Applications include: 1969-72 LT1-L46 and/or Automatic transmission.
