

What Makes DeWitts Radiator the Better Choice?

Press Formed End Tanks This provides an original OE look with radius corners without fabrication welds and potential leaks from cracking seams.

Epoxy-Free Core Nocolok brazing is the gold standard for all automotive applications because it produces a leak-free welded tube joint without the need for additional filler.

Direct Fit® Is our registered trademark and our company philosophy. Every DeWitts Radiator must fit into the original mounting location without modifying or altering your classic car. The end result is a satisfied customer and fewer returns.

Extruded Side Channels Stronger than fabricated and original in detail.

Black Ice™ Is a special epoxy coating that adheres to aluminum like no other products and provides an original look for older copper/brass applications.

No Adapters All transmission connections are the same size and thread as the original.

State-of-the-Art Welding Expert craftsmen provide the finest products in the industry.

Logo Cap Soon we will include our custom engraved billet aluminum radiator cap with all units that incorporate a filler neck. (Summer 2017)

Lifetime Warranty Properly maintained, this could be the last radiator the customer ever buys.

DeWitts Scores a PERFECT 10 Against the Competition!
