## FROM THE SOURCE

FROM THE SOURCE is a maker of sustainably sourced, handcrafted hardwood furniture and accessories.

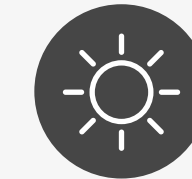

As a brand, we are inspired by nature and committed to preserving the environment by creating designs that breathe new life into reclaimed materials, and have been recognized within the industry for our ability to balance low emissions manufacturing with an eye for urban design.

FROM THE SOURCE is a complete vertical venture in that we source and manufacture all of our own products at our factory in Indonesia. By having full control of our production process and through the use of low technology manufacturing, we are able to design and produce handcrafted items, as well as custom pieces.

OUR PROCESS

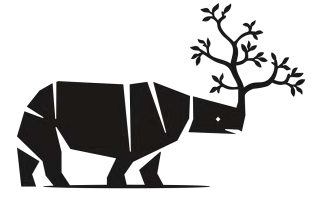

## SUSTAINABLE PRACTICES

[FROM THE SOURCE](#) strongly believes in the social, ethical and environmental priorities of sustainable sourcing. We continue to seek out materials that can be repurposed, as well as those that have been sourced and managed responsibly.

Our factory is SVLK Certified which ensures all of our hardwoods are sourced locally, sustainably, and in full compliance with Indonesian manufacturing regulations in order to prevent deforestation. It also helps to guarantee quality health standards and workplace conditions for our workers, which in turn helps to improve their quality of life. We operate side by side with the Indonesian community to support, develop, and improve sustainability efforts in and around Indonesia.

**OUR PROCESS**

6

## OUR SOURCE

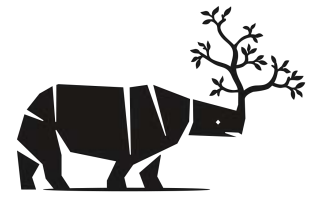

FROM THE SOURCE is a complete vertical venture in that we source, mill, dry and manufacture all of our own products from our factory in Indonesia using premium hardwoods sustainably sourced in partnership with the local community.

Our fine hardwoods are typically harvested after a 15-30 year period. During that time, the tree goes through a slow growing process where the wood strengthens and becomes more resilient as a result of the harsh, unpredictable climate. Once the tree has matured, it is ready to be dried, milled, and transformed into beautiful pieces of furniture.

Together, we work with families and community members that have been practicing certain production methods, such as fine woodworking and tree farming techniques, for generations. Using the traditions and craftsmanship deeply rooted in Indonesian culture to influence the production of modern trends, we are able to help meet the demands of a growing economy.

FROM THE SOURCE

## OUR WOOD TYPES

*Tectona grandis*  
Janka Hardness 1,070

### TEAK

One of the most sought after tropical hardwoods, young, plantation grown teak shows differences between the pale blond sapwood and darker heartwood that can create a dramatic striped effect. Equally popular for indoor and outdoor use, Teak naturally produces oils and resins that help it resist the elements. When left outdoors, unfinished teak weathers to a beautiful, soft gray patina.

*Mangifera indica*  
Janka Hardness 1,060

### MANGO

Mango trees, although not native to Indonesia, have been cultivated there for many years. Once the old mango trees no longer bear fruit they are culled to make way for younger trees and the harvested wood is used for furniture making. A medium density hardwood, Mango has a beautiful rich grain that can vary widely, from straight, subtle markings to flashes of pattern akin to tiger maple.

*Erythrophleum suaveolens*  
Janka Hardness 2,920

### TALI

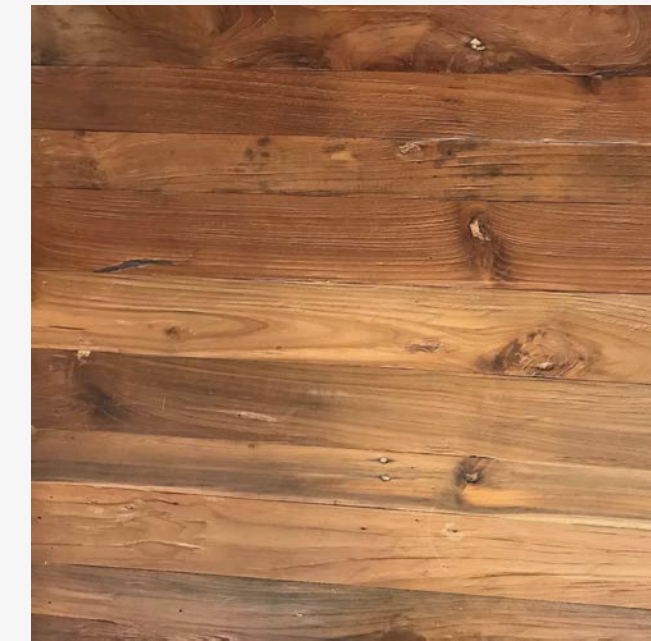

Tali, also known as North Indian Rosewood, has a rich, warm hue across the red and brown color spectrum. It has a very high density which makes it a very hard wood. The grain is typically tight, but may be irregular. Due to Tali's durability, it is commonly used for both indoor and outdoor furniture, and has excellent finishing qualities.

*Melia azederach*  
Janka Hardness 1,055

### MINDI

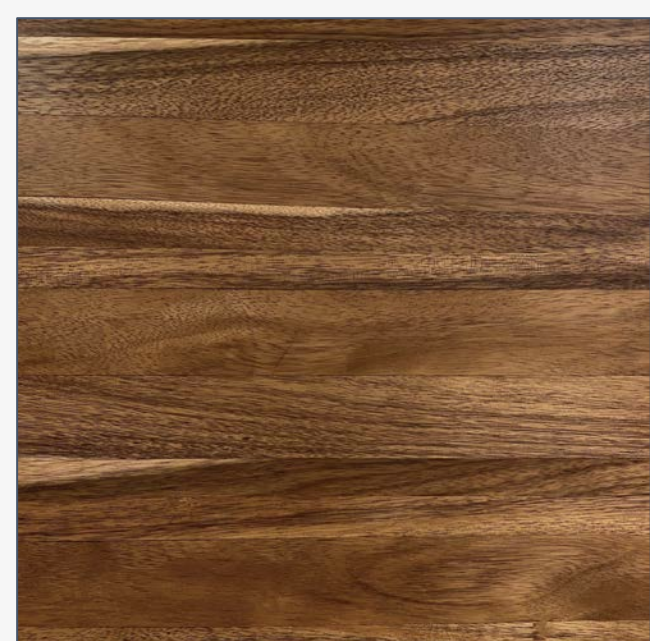

Originally from China's Himalayan region, Mindi remains smooth under friction and dries easily with little shrinking or warping resulting from the process. The sapwood of Mindi is yellowish-white in color, while the heartwood is reddish, becoming more reddish-brown after exposure. One of our softer wood options, this wood type can be special ordered for budget conscious projects.

*Tectona grandis*  
Janka Hardness 1,070

### RECLAIMED TEAK

Older Teak, including salvaged and reclaimed Teak, is typically more worn with less contrast which is accented by its uniform warm golden brown "classic Teak wood" color. A durable hardwood, Teak is equally valued for its handsome appearance as well its strength, stability, and resistance to wear.

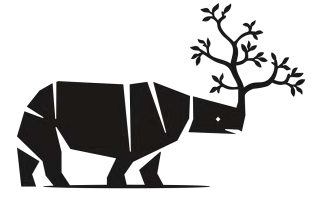

*Albizia procera*  
Janka Hardness 1,020

### WERU

Often found throughout Tropical Africa, Weru wood exhibits a pale brown to dark reddish-brown or golden-brown heartwood with a striking white to straw-colored sapwood. This moderately durable and termite resistant wood features a straight grain which is usually in an interlocked straight or wavy pattern. This wood is easy to work with and holds finishes exceptionally well.

## DESIGN, MANUFACTURING + IMPORT

By having full control of our production process and through using low technology manufacturing, [FROM THE SOURCE](#) is able to produce unique, handcrafted items in small batch runs while maintaining the flexibility needed to produce larger scale projects.

From the hand selection of hardwood planks to the use of traditional sand casting techniques to create solid iron pieces, a very high level of craftsmanship is upheld and shines through in everything we produce. In addition to our product line, FROM THE SOURCE offers a wide array of design and manufacturing services.

Our furniture design services include modifications to our product line as well as development for fully custom designs. Our NYC facilities can be used for shorter lead time modifications and speciality finishes.
