

Water Borne Acrylic Furniture Finish Care & Cleaning Instructions:

Thank you for your recent purchase!

It is our desire that this piece serve you well for many years to come in both form and function.

To care for your wood furniture, take a “less is more” approach. For daily cleaning a damp cloth is best. Add a little mild soap if necessary, but do not saturate with moisture. We recommend using Murphy Oil Soap or Soft Soap.

We use environmentally friendly, water borne finishes that should hold up to daily use. They are impervious to water and alcohol resistant, but can be damaged by standing moisture or heat.

Cleaning products containing ammonia or with high PH will damage any wood finish product, causing the finish to soften over time. You should only use cleaners with a neutral PH if you must use one at all. Window-cleaning products such as Windex or common kitchen counter sprays should never be used on any wood furniture, and their use will void any warranty expressed or implied.

Avoid using any furniture polish containing silicone. This could cause problems with refinishing at a later date.

Thank you for your patronage.

Sincerely,

from
