Nitro-Cellulose Lacquer Furniture Finish Care & Cleaning Instructions:

Thank you for your recent purchase!

It is our desire that this piece serve you well for many years to come in both form and function.

Properly maintained, this finish can last indefinitely. An effective maintenance plan to keep your finish looking great might look like this:

Cleaning the Furniture:

During the first three weeks after receiving your furniture avoid leaving anything (table runners, vases, books, etc.) on the furniture surfaces. This will allow the finish to cure thoroughly and acclimate to the environment of your home. Use a soft cotton cloth slightly dampened with water. Do not use too much water. For more stubborn dirt, use a low PH to neutral PH cleaning Agent. We recommend using Murphy Oil soap or Soft Soap.

Refreshing and Repairing the Finish:

To repair superficial scratched, stains, or ground-in dirt, use 0000 steel wool or a white Scothbright pad to gently scuff the affected area to loosen the finish. Wipe clean with a cotton cloth to remove residue so that no excess material is left on the repair area. Lightly spray scuffed area with a matte aerosol lacquer, such as, Behlen H3900 Jet Spray Clear Lacquer in Dead Flat. Let dry for 15 - 30 minutes. If needed, repeat. As a precaution, either consult with a professional or test out process on a small underside area.

Thank you for your patronage.

Sincerely,
