

BT DieselWorks AutoSync features list

2014-2018 Silverado/Sierra 1500

2015-2019 Silverado/Sierra 2500-3500

2015-2019 Tahoe/Suburban/Yukon/Escalade

AutoSync is a revolutionary new compact expansion module that plugs into your OBD port and adds a wealth of features and information to your GM truck or SUV. Installation takes only seconds, is easily reversible, will NOT void any warranties, and is completely undetectable by a GM dealer.

All of the AutoSync features are easily controlled by a custom user interface that is displayed on the factory radio/navigation touchscreen. Additional info can also be displayed in the instrument cluster's Driver Info Center, and additional functions can also be triggered by the steering wheel controls.

- Control DSP/SOTF tunes --- Strobe lights mode --- Work lights mode --- Onscreen engine data display
- Read/clear DTCs --- Manually active rear camera --- Manual high idle --- Torque converter lockup control
- ABS line-lock/launch control --- transmission fast learn --- transmission TAPS reset --- DPF force regen
- Onscreen acceleration/G-force/stability-control data display --- Learn/program new keyfobs
- Onscreen 0-60mph performance timer --- TPMS disable --- TPMS warning threshold reprogram
- Close/open windows via keyfob --- set fog lights with high beams --- disable daytime running lights
