# iButtonLink

T E C H N O L O G Y

The MatrixCare Second-factor solution is implemented by assigning an iButton to a MatrixCare User. The complete solution requires the iButton inserted in a key fob that is scanned by the iButton Keyboard. For DEA Second Factor authentication a specific model of the iButton is required: DS1963S.

## iButton

The iButton has two parts – an iButton, which is carried by the User (usually attached to a key fob or tag, etc.), and a reader (multiple users), which is attached to the computer, on which the iButton is placed to initiate the authentication. The 2nd Factor Authentication PIN and iButton passcodes are set up in the User ID Master in MatrixCare for each User.
