FOR IMMEDIATE RELEASE

New Product from iButtonLink!
Whitewater, Wisconsin, April 17, 2017 – After weeks of development and meticulous testing, iButtonLink is proud to announce the release of its new family of products: the iButton® Typer™ family.

A New Take on an Old Product
The iButton® Typer™ takes the basic concept of the old iButtonKeyboard– an easy-to-use USB device that input the serial numbers of iButtons® without having to install any drivers– and improves it by creating an easily customizable and unique device. While the original iButtonKeyboard was limited to inputting serial numbers, the new iButton® Typer™ family has several models that can be configured in a variety of ways, such as "typing" serial numbers, temperature/humidity alarms, data logs, and memory logs, using JSON and RESTful interface.

To Cold Chain and Beyond!
The iButton® Typer™ is versatile enough to be used in a multitude of applications. Perfect for cold chain, the iButton® Alarm Typer™ reads and prints the alarm information from Hygrochrons and Thermochrons, making sure that you always know that your shipment was kept at the proper temperatures. The iButton® Serial Typer™ can be used for front desk registrations or for fleet driver IDs. The iButton® Memory Typer™ or the iButton® Log Typer™, both of which "type" the contents of their memory or temperature and humidity logs, is ideal for use in research. The iButton® Typer™ family is great in any application!

Molded to Perfection
Our iButton® Typers™ are molded in compact, water-resistant black Technomelt, and are small enough to fit in a pocket. iButton® Typers™ are available with a micro-USB cable either molded into the body of the device or as a detachable option. The iButton® Memory Typer™ and the iButton® Log Typer™ are available with the option of a touch read head or a touch-and-hold read head to keep the iButton securely in place as the Typer™ inputs data from it.
