When selecting ramps suitable for your application, the following points must be considered:

- » Total weight of your machine.
- » Track or tyre width on your machine.
- » Height of your truck/trailer deck from the ground.
- » An acceptable gradient for your machine to negotiate (we can help you on this).

Selecting your

HYWAY RAMPS

Below is a chart showing our standard range of Industrial Ramps. They are made to accommodate a deck height of between 1100 and 1300mm. Variations to length, width and deck height are very easily accommodated and supplied upon your order.

RECOMMENDED METHOD FOR FIXING TO THE DECK:

The top end of the ramp has a flat plate which sits on the end of the deck.

This is secured by a steel pin (supplied) which is placed through a matching hole in the deck.

This has proven to be a better way of securing than welding pins or lugs.

MODEL	CAPACITY (PER PAIR)	WEIGHT (PER RAMP)	LENGTH (MM)	OTHER DIMENSIONS (MM)			
				A	B	C	D
125/330	3000 kg	32 kg	3300	490	400	125	40
150/330	4500 kg	43 kg	3300	550	450	150	45
150/360	4500 kg	47 kg	3600	550	450	150	45
175/360	6000 kg	58 kg	3600	650	530	175	60
200/360	7500 kg	68 kg	3600	730	600	200	60

The rated capacity allows for the "axle load" across the pair. The rated capacity must exceed the heaviest axle or concentration of load.

GUARANTEE: Hyway Manufacturing guarantees its products against manufacturing defects or faults. Should any failure occur, Hyway Manufacturing will see that repairs are made, or replacements supplied, provided that it is satisfied that the ramps were not subject to use outside the recommended guidelines in the 'Important Guidelines' supplied with the product. This guarantee is valid for 24 months from date of manufacture and does not cover general wear and tear.
