

# WHAT'S INSIDE

**1. SEAT CUSHIONS** Seat cushions are made up of an environmentally friendly foam core with fiber wraps in a down proof ticking. Fibers are 80% regenerated and consist of virgin and waste fibers that are added with a binder fiber. NaturalLEE foam replaces 30% of the petroleum-based ingredients with a renewable soy-based BiOH™ polyol. This saves 57 gallons of crude oil a day.

**2. & 3. BACK & THROW PILLOWS** Back and throw pillows are made up of 100% recycled fibers made from clear and white plastic bottles. The recycled material is reprocessed into its original form and then into fiber. The cushion casing is made up of down proof ticking.

**4. SEAT DECK AND TRIM PAD** Seat deck and trim pad are made from 80% regenerated fibers that consist of virgin and waste fibers, that are added with a binder fiber.

**5. ARM PADDING** Foam padding is naturalLEE foam with soy-based BiOH™ polyol, replacing 30% of petroleum-based chemicals traditionally used to manufacture foam. A fiber overlay is made from 80% regenerated fibers that consist of virgin and waste fibers that are added with a binder fiber.

**6. FRAME** Constructed of engineered laminate panels and soy-based resins, the panels are made from responsibly-managed forests, making them truly environmentally friendly products. All of our suppliers voluntarily adhere to the Sustainable Forestry Initiative® (SFI®); all of our laminate frames meet this certification standard. Even more, the springs used in our frames are made from 80% recycled metal.

**7. FABRICS** Lee has always focused on natural fibers when purchasing fabrics. There are many variables involved in sourcing soft, durable, beautiful fabrics. Cotton, linen, hemp, and jute are natural crops grown in a field. The weather, soil conditions, and other elements affect the consistency of a crop. The natural color, and yarn texture and length varies from season to season, causing differences in the end product when these fabrics are woven and dyed.

**8. FINISH** LEE uses very low volatile organic compound (VOC) finishes on all of our products. Conventional finishes contain VOCs which release harmful pollutants into the air in your home.

**9. RECYCLING** Our efforts go beyond naturalLEE. Throughout the organization, we recycle paper, plastic, aluminum, and cardboard. In manufacturing, all fabric, trimmings, and fiber waste are recycled through a national waste management company, who in turn, distributes almost 100% of our raw materials for use in other products.

**10. FR FREE** As of March 3, 2014, LEE Industries is 100% compliant to the new TB117-2013 flammability requirements. This legislation allows LEE to ship our FR FREE (Flame Retardant Free) cushions, foam, fabric & decking products throughout the country. All of our foam products have been rigorously tested by CertiPUR-US and contain their seal of approval. This assures you that our products meet specific criteria for physical performance, indoor emissions, environmental stewardship and pose no health risk. Visit [certipur.us](http://certipur.us) for more information.
