## DUAL STAND ASSEMBLY & USE

### **INTRODUCTION:**

Your DualStand will ship in one box with custom made packaging and all the components to get set up and start using it in about ten minutes. If there are any unexpected damages please retain all items including the box and packaging material. Photograph the damage and email us at [acousticremedycases@gmail.com](mailto:acousticremedycases@gmail.com). You can also call us with the contact information listed on our website at <https://www.acousticremedycases.com/pages/contact>. We will file a claim against the carrier and get another case shipped out ASAP at no cost to you.

In addition, should you need any additional information to complete the set up or have questions/comments/concerns with using your DualStand, please don't hesitate to reach out.

Inside this instruction manual, you will find a DualStand Standard Component ID that introduces you to the components of the DualStand.

### **PACKING LIST:**

- 1 - base
- 1 - Bumper pad
- 1 - Upright pole
- 1 - String Swing - angled back edge and threaded bolt trimmed
- 1 - String Swing - flat back edge and standard bolt length
- 2 - Stainless steel thumb bolts

## DUALSTAND ASSEMBLY & USE

### DUALSTAND ASSEMBLY

1.) Remove all items from the box and locate the individual components on the packing list. The thumb bolts, String Swings, and bumper pad should be in a separate bag.

2.) Use the thumb bolts to attach the upright pole to the base such that the pole angles from the back of the base at the bottom toward the front of the base at the top.

There are a few methods of aligning the holes on the base with the threaded inserts on the upright.

- Method 1: Lay the pole across your lap and hold the base up to the pole to align the holes with the threaded inserts on the bottom of the pole.
- Method 2: Pinch the base unit between your legs and move the pole to align the holes with the threaded inserts.
- Method 3: Pinch the upright pole upside down between your legs and align the holes with the threaded insert.
- Method 4: Lay the pole on a carpeted surface and pick up the bottom to align the holes with the upright pole.

3.) Tighten the thumb bolts so they are nice and snug.

4.) Set the DualStand upright to confirm that the pole is attached facing the correct direction (it will be very obvious if it isn't)

5.) Thread the String Swing hanger with a flat back edge into one of the two threaded inserts on the back side of the Dual Stand (most guitars hang at the best position using the top insert).

6.) Thread the string with the angled back into the front threaded insert. The angled back allows the String Swing to be inserted parallel to the ground.

7.) Hang a guitar in the string swing on the back side of the stand and make note of where the guitar contacts the pole. Place the included cork pad with adhesive back in the location that provides padding and support at the contact point.

8.) Insert a wooden plug into the unused threaded insert. A second plug is included if you decide to remove the String Swing from the back side of the stand so you can plug both holes.

9.) Adjust the threaded feet on the bottom of the base to match the contour of the floor and ensure balanced contact.
